# ARKANSAS STATE TOURNAMENT.

Editor Forest and Stream:

The fourth annual tournament of the Arkansas State Sportsmen's Association, held at the Fort Smith Gun Club, Fort Smith, Ark., May 7, 8, 9 and 10, was not as successful as the previous tournament, given by the association. The Fort Smith Gun Club had been advertising \$1,000 added money, but when the programmes appeared they only showed \$800 added money; the small amount added to the purses, the stringent financial matter and the geographical location of Fort Smith, in the extreme northwestern part of the State, making it very inconvenient for most of the members of the association to attend, are the principal causes for the small attendance.

Among the visiting sportsmen in attendance during the shoot were J. A. R. Elliott, of Kansas City, Mo., W. R. Crosby, of O'Fallon, Ill., John Parker, of Detroit, Mich., W. W. McIlhenny, of Vevir City, Kansas, who shot under the nom-de-plume of Wallace, R. L. Campbell, B. A. Fay and E. L. Fay, of Springfield, Mo., Arthur C. Wilde, of Hutton, Kansas, Hot Springs, was represented by G. W. Hughes, A. R. Smith, Chas. N. Rice, Dr. A. U. Williams, Dr. Livers, John J. Sumpter, Jr. and P. P. Wood. Little Rock by Col. J. A. Woodson, Dr. F. L. French, J. W. Irwin, R. W. Duley, John M. Pemberton, J. K. Thiebault, John W. Dickinson, Paul R. Litzke and L. W. Browning and J. T. Lloyd, of Pine Bluff.

The Grand Central Hotel was headquarters for shooters and the proprietor, Mr. Cleland, showed them every possible attention and courtesy, making their stay at his hotel a very pleasant one indeed.

The grounds are about two miles from the city, and the only way to reach them is by special conveyance.

They are not very suitable for trap-shooting, being very uneven and having a bad background, a grove of trees standing right in line of the traps, though some distance, making the targets very difficult to see on dark days. Such as Tuesday, Wednesday and Thursday were the best days, the wind was light, the hollow, while about 200 yds. in front of numbers 3, 4 and 5 traps was a high ridge; this made a straightaway bird from either of these traps appear very much lower than they really were, thus deceiving many of the shooters and causing them to undershoot these birds, while just to the left of No. 1 trap stood a small house only about 150 yds. away. In the unknown angles events, if a shooter was unfortunate enough to get a half-quarrying bird from either of the traps, he would find himself behind the house before one could shoot, in which case the shooter was generally allowed another bird. It was very amusing to see the efforts made by some of the shooters to break this target before it could get behind the house; sometimes the shooter was lucky enough to score a kill, but frequently the contents of the gun was emptied into the building. If you shot the result had to be scored.

Monday the weather was clear but extremely hot for this season of the year. That night it rained very hard, Tuesday was cloudy and threatening, but much pleasanter, Wednesday was the same. Thursday it began to rain about 7 o'clock and continued until about 10:30 o'clock, shooting did not begin before 11 o'clock, but the programme was shot out and several extra events.

Honors were equally divided. Hot Springs won the team championship medal, and the Rock won the Kenner Cup, Harvey Dugan, of Fort Smith, won the individual championship medal.

At the meeting of the association, Hot Springs was the place chosen to hold the next meeting and tournament, and the following officers were elected: G. W. Hughes, Hot Springs, Pres.; J. T. Lloyd, Pine Bluff, Vice-Pres.; John J. Sumpter, Jr., Hot Springs, Secy.; C. N. Rice, Hot Springs, Treas.

Vote that the president appoint a committee to form a new constitution and by-laws; carried. The members of the Association discussed at length the gross violation of our game and fish laws, and it was finally moved and carried that the president be empowered to appoint a competent person, at any time, to investigate such violations as may be brought to his notice, and have the offenders prosecuted to the fullest extent of the law.

The secretary was instructed, upon motion of Col. Woodson, to correspond with Gov. Fishback in reference to the violations of our game and fish laws, and request him, in the name of the Association, to instruct the sheriffs of each and every county in the State to use every effort to enforce the game and fish laws and prosecute every violation of said laws that may occur in his county.

Vote that the president appoint a committee of three to draft an amendment to the present game laws in regard to the shooting of quail. Moved by Col. Woodson, and duly carried, that the same committee be instructed to draft a bill making it a violation of the law to kill any wild ducks in this State between March 1 and Sept. 1 of each year.

Moved and carried that the secretary write to each member of the Association next year for a donation of \$2, should he be disposed to contribute; the money to be added to the events on the programme of the tournament.

Mr. Paul R. Litzke, of Little Rock, moved that the Association become a member of the National Game and Fish Protective Association. Carried.

Bluesrock targets, expert trap and electric pulls were used and this was the hardest to manage the shoot made a great combination; one that is hard to beat; everything worked like a well-oiled piece of machinery. The way John Parker would hustle off a programme was a revelation to the shooters in this section of the country.

American Shooting Association rules governed, four money, 40, 30, 20 and 10 per cent, all tie-divided. Elliott, Parker and Crosby shot in expert class. The most interesting events were:

State team shoot, for championship medal, at 25 targets, 15 known traps, unknown angles, 10 expert, \$10 entry.

Hot Springs Team.  
Hughes.....11111111111111111111-22  
Sumpter.....10111111111111111111-19  
Williams.....11111111111111111111-21  
Rix.....1111111111111111111111-18-80

Little Rock.....10101111111111111111-10-100-10  
Pemberton.....11111111111111111111-23  
Dickinson.....11111111111111111111-20  
Woodson.....11101111111111111111-19-78

State team shoot for Keeley cup, at 15 targets, unknown angles, \$3 per man entry.

Hot Springs Team.  
Mathews.....1100111111111111-8  
Dugan.....0111111111111111-13  
Ward.....1101111111111111-31

Little Rock Team No. 2.  
Dickinson.....11100111111111-13  
Pemberton.....11101111111111-37  
Ward.....1110111111111111-37

Individual State Championship, at 25 targets (15 unknown angles, 10 expert rules), \$2 entry:

## Prairie Gun Club Scores.

The scores of the Prairie Gun Club interstate tournament, shot May 17, 18, 19, were delayed by the great storm so that they did not reach us in season for last issue. They are given to-day.

The monotony of the live bird events was broken sometimes by a good bird. The scare ropes were almost in constant use to scare or force the birds to take wing. The strong wind deterred some from flying, and carried many others out of bounds after they were killed. There were, however, about two hours of good shooting on Thursday. On Thursday afternoon, when the weather turned colder and a stiff north wind blew across the traps, the beginning of the gale which did so much damage to the shipping on the lakes in the thirty-six hours following. Thursday was sweltering hot up to the early part of the afternoon. Then the gentle southern breeze gave place to a much cooler wind, when the birds flew better. They were very inferior lot taken after, which the birds flew better. They were very inferior lot taken after, which the birds flew better. They were very inferior lot taken after, which the birds flew better.

In the afternoon, a light snowstorm fell Saturday, on which day the wind still blew hard from the north, causing the targets to take the most erratic flights. Sometimes a target sent against the wind would generally climb up, turn upward and come back, falling yards behind the shooter. Sometimes they would suddenly pitch many yards behind the shooter. Down wind, they went with remarkable swiftness. It was the hardest kind of shooting. Add to these difficulties in manning the shot, the negligence of the Prairie Gun Club in not having a sufficient number of men to look after the arrangements which properly devolved upon the club, and it can readily be inferred that the tournament was not a success. Mr. Shaner would, although matters went most efficiently for the success of the tournament, notwithstanding the discouraging conditions. Mr. John Parker proved a most valuable acquisition to the clerical force on Saturday. All purses divided 40, 30, 20 and 10, except when otherwise provided. Few ties were shot off.

The Lake Street Elevated Cup. A sweepstake of \$5 each. Novelty rule. Gold vase, valued at \$150, in addition to first money. Four moneys:

Rifle in Texas.

A PRIZE rifle tournament took place at Cut Off, a station on the Southern Pacific east of San Antonio, which was attended by 104 contestants. Mr. Chas. Hummel, Dr. A. Herf, Mr. E. Teich and Capt. E. A. Dorsch, of San Antonio, represented the Alamo City, and struck a hot nest of rifle experts. They report the shooting splendid, the country smiling with flowers and good crops, but the execrable music furnished for the occasion caused a shrinking of the San Antonians' medulla oblongata, and they attribute their failure to stand in the front row to the horrible fanfares of the country band. Conditions, four shots at 125 and four shots at 175yds., American standard target, 10s only to count. Possible 80 points, open sights. The prize winners are as follows:

O Forcke, Live Oak.....	77	H Rosenbrook, Bexar.....	68
P Forster, Live Oak.....	75	A Schertz, Cut Off.....	68
L Adams, Cut Off.....	74	T Hoopp, Standard.....	68

Greenville Rifle Club.

TWENTY members of the Greenville Rifle Club met at headquarters May 25 for competition in the weekly handicap gallery shoot. The new system of class shooting and the division of the prize money after each shoot is becoming quite popular with the members. The class winners and the scores are appended:

First class—First, C. Scheeline, 243-45; second, M. Dorrier, 244.  
Second class—First, J. Spahn, 236-3; second, Charlock, 225-5.  
Third class—First, Edward Wuestner, Jr., 223-8; second, R. Daniels, 219-7.

Scores: Collins 234, Robidoux 234, J. Boag 236, Scheeline 243, Chavant 223, Gotthardt 218, Charlock 231, Hil 217, Ziegler 206, Huelson 222, Dorrier 244, C. Boag 237, Purcell 237, Agneau 224, Dadds 231, J. Spahn 236, Chase 226, Daniels 217, E. Wuestner 223, Holzapfel 221.

Schlicht Rifle Club.

FOURTEEN members of the Schlicht Rifle Club were present at headquarters on May 22 to participate in the competition for the class medals. John Dedrick won the champion medal, Wm. Schlicht the first class, M. Dans the second class and Geo. Reichert the third class. Scores: G. Schlicht 242, S. Dedrick 238, G. Reichert 232, W. Schlicht 233, J. Schlicht 231, G. Dorr 230, M. Dans 230, C. Meyer 230, J. Diehl 227, A. Meyer 227, C. Schlicht 220, C. Stein 220, G. Goehing 219, F. Lambriz 223.

New York Independent Schuetzen Corps.

THE third monthly practice shoot of the New York Independent Corps was held in the Union Hill Schuetzen Park on Wednesday of last week. This corps held its previous shoots in Washington Park, but the destruction by fire of the latter park a few days since forced the corps to transfer its shoot for the present to New Jersey. The attendance at Union Hill was light. The weather was clear and warm, the atmosphere was, however, heavily charged with moisture from the rain the day previous, and the consequence was that the targets were somewhat obscured by fog. Notwithstanding the unfavorable conditions there were some good scores made by the members who participated in the shoot. The best score on the ring target was made by Wm. Hayes with 115. Gus Zimmerman was second with 113. Gus Zimmerman was first on the man target with 59. Alex. Stein was second with 58. On the point target Gus Zimmerman was high with 19. Ignatz Marten and B. Walther tied for second place with 18 each. Scores:

Ring target, 5 shots, possible 125: W. Hayes 115, B. Walther 112, G. Zimmerman 113, I. Marten 108, G. Krauss 106, E. Fisher 100, Bittschier 97, G. Bauer 71, Kronsberg 71, Koerber 63, H. Schmitt 63, A. Schumacher 52, H. Martens 40, F. C. Halbe 39.

Man target, 3 shots, possible 60: G. Zimmerman 59, A. Stein 58, W. Hayes 56, B. Walther 55, I. Marten 53, E. Fisher 52, G. Krauss 49, G. Bauer 48, J. Bittschier 43, A. Schumacher 23, A. Schmitt 20.

Point target, 5 shots, possible 20: G. Zimmerman 19, I. Marten 18, B. Walther 18, E. Fisher 17, Stein 17, Kohn 17, Hayes 17, Krauss 16, Bittschier 15, Bauer 15, Soell 14, Kronsberg 14, A. Schmitt 12, Baub 12, Schumacher 11.

Palisade Rifle Club.

THE weekly gallery shoot of the Palisade Club was held on May 22, nine members being present and participating. Scores: R. Glaser 232, G. Dorr 230, F. Esperer 230, C. Hemberger 227, H. Rose 224, H. C. Zuelch 218, M. Zeller 217, O. Bergemann 203.

RIFLE NOTES.

The New York Rifle Club opened its outdoor shooting for the season 1894 at the Greenville Schuetzen Park on Wednesday of this week. The Heidenreich Rifle Club closed a two days' shoot at Lion Park on Monday of this week. The scores will appear in our next issue.

The Concordia bund of Brooklyn will hold a festival and prize shoot in the Glendale Park on June 3 and 4.

Messrs. Plaisted and Hansen met in a friendly match in the Greenville Park on Friday afternoon of last week; 70 shots, German ring target:

Plaisted.....209 218 208 215 218 216 220—1504  
Hansen.....218 206 209 214 210 221 222—1497

The Hoboken Independent Corps holds its annual festival and prize shoot in the Union Hill Park on Wednesday and Thursday of this week.

Gus Zimmerman sails on the Augusta Victoria on Thursday of this week for a two months' visit to Germany. He will participate in the great shooting festival in Mainz June 17-25.

Answers to Correspondents.

M. H. F., Decatur, Ill.—The scientific name you send is correct.

J. H. A., Philadelphia.—1. There is no means of making ordinary clothing waterproof. 2. You might communicate with the proprietor of the Aberdeen Hotel, at Longport. 3. We would advise you to go into one of the Philadelphia tackle stores and take their advice on the tackle.

J. W. E., Rochester.—Will you please inform me through your paper first, of the fishing in Keuka Lake, N. Y., second, are there any trout streams that run into it? Ans. 1. In Keuka Lake are black bass, whitefish, perch, pickerel, rock bass, etc. 2. We cannot say. Write Lake Keuka House, Keuka.

G. R. F. Jr., Cambridge, Mass.—Can you inform me through your columns of any place in New Brunswick where I can get good plover and shorebird shooting; good English snipe shooting; teal or black duck or woodcock shooting in September? Ans. We think you would find all the above kinds of shooting in the vicinity of Dalhousie or Eel River.

Quickening the Schedule of the Pennsylvania Limited between New York, Philadelphia and Chicago.

A GENERAL change of time will go into effect on the Pennsylvania Railroad lines on May 27.

The principal change is in the Pennsylvania Limited, the schedule of which is greatly quickened between the East and the West. The importance of this train to the traveling public is appreciated by the management, and nothing is left undone to make it the best and most attractive passenger train in the world. The great improvements recently made in the splendid road bed of the Pennsylvania, the elimination of curves, the laying of additional tracks, and the perfected block signal system enables the company to make the schedule of twenty-four hours between New York and Chicago with greater ease, comfort, and safety to the passenger than under the old schedule of twenty-six hours.

On the new schedule the Limited will leave New York at 10 A. M., Philadelphia 12:20 P. M., Washington 10:30 A. M., Baltimore 11:40 A. M., arrive Pittsburgh 9:15 P. M., and arrive at Chicago 9 o'clock the next morning. The east-bound train will leave Chicago 5:30 P. M., leave Pittsburgh 7:15 A. M., arrive Baltimore 4:20 P. M., Washington 5:45 P. M., Philadelphia 4:17, and New York 6:30 P. M. It will be equipped with Pullman perfected vestibule sleeping, dining, smoking and observation cars.

This is the best and most conveniently adjusted schedule of any train in service between the East and the West. The New York man who has business in Chicago may arrive there in the morning, execute his mission, and depart for the East in the afternoon, having had the benefit of a full day in Chicago.—Adv.

YALE  
MIXTURE

A GENTLEMAN'S SMOKE.  
WE COULD NOT IMPROVE THE QUALITY  
if paid double the price. It is the  
choicest Smoking Tobacco that ex-  
perience can produce or that money  
can buy.

MARBURG BROS., BALTIMORE, MD

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where we get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

MARSTERS HAS WORMS

I am with you again with lower prices for fishing tackle. I find by experience that putting down the prices and not decreasing the quality, it increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at \$1.19 until all are sold. These rods are all nickel mounted, solid reel seats, silk wound, extra tip, complete in wood form and will give satisfaction.

Length and weight of the Fly Rods are: 9ft., 6oz.; 9½ft., 6½oz.; 10ft., 7oz.; 10½ft., 7½oz.; 11ft., 8oz. Reel seats below hand.

Length and weight of the bass rods are: 8½ft., 9oz.; 9ft., 10oz.; 9½ft., 11oz.; 10ft., 12oz.; 10½ft., 14oz. Reel seats above hand.

No. H—A special lot of Hard Rubber and Nickel Raised Pillar, Multiplying Reels with Balance Handle and Side Spring Click, 40yds., 63 cts.; 60yds., 73 cts.; 80yds., 88 cts.; 100yds., 98 cts.

Any of the above reels sent by mail for price and 10 cts. extra for postage.

No. E—Special lot Hard Rubber and Nickel Raised Pillar Click Reels, 40yds., 38 cts.; 60yds., 48 cts. Sent by mail 5 cts. extra for postage.

No. C—Nickel-Plated, Raised Pillar Multiplying Reels, with click and drag and screw oil cup, 40yds., 53 cts.; 60yds., 63 cts.; 80yds., 73 cts.; 100yds., 83 cts.; 150yds., 98 cts. 10 cts. extra for postage.

THE NEW IDEAL RIFLE.

# Standard Works for the Sportsman's Library.

ANY BOOK HERE NOTED WILL BE SENT POSTPAID ON RECEIPT OF PRICE BY THE FOREST AND STREAM PUBLISHING CO., 318 BROADWAY, NEW YORK.

## ANGLING.

### The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, \$5.50.

### American Fishes.

A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages. Price, \$3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

### Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHELL, M.D. Illustrated. Cloth, 470 pages. Price, \$3.00. Dr. Henshall's monograph is the standard work.

### More About the Black Bass.

Being a supplement to the "Book of the Black Bass." By JAMES A. HENSHELL, M.D. Fully illustrated. Cloth, 204 pages. Price, \$1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

### Fly-Fishing and Fly-Making for Trout, etc.

By J. HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, \$1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making, there are samples of all, attached to blank sheets like pictures by way of illustration.

### Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 454 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, \$1.50.

### With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oology of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 480 pages (7x9 1/2 in.), 147 illustrations. Price, \$5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

### Fly-Rods and Fly-Tackle.

Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Cloth, 264 pages. Price, \$2.50. The most exhaustive work on the subject in print.

## MANUALS.

### Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

### Woodcraft.

By NEMMUK. Cloth, 160 pages. Illustrated. Price \$1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

### Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, \$1.00.

### Log Cabins.

How to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, \$1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

### Hints and Points for Sportsmen.

Compiled by "SENECA." Cloth. Illustrated, 224 pages. Price, \$1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

## SHOOTING.

### Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understood of the People. By GURDON TRUMBULL. Cloth, 222 pages. Price, \$2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

### Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidae of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, \$2.50.

### The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breechloading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, \$2.50.

### The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, \$3.00. New edition.

### Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksmen; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, \$2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

### The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, \$2.

### The Breech-Loader and How to Use It.

288 pages. Price, \$1.00. A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

## CAMP AND HOME.

### Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, \$1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

### Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, \$1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

### Pawnee Hero Stories and Folk-Tales.

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, \$1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

### Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., \$1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfoot presents a series of graphic pictures of savage life in peace and in war.

### Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, \$1.50. Mr. Hallock's writings are always vivid and full of life.

## THE KENNEL.

### Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, \$2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

### Kennel Record and Account Book.

Boards, \$3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

### Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

### Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, \$1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

### Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, \$2. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

### House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

### Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor London *Field*. Illustrated, 584 pages. Price, \$6. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

### Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, \$3.00.

### The Spaniel and Its Training.

By F. II. F. MERCER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, \$1.

### Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, \$2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

## YACHT AND CANOE.

### Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14 1/2 x 12 1/2. Price, \$10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

### Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, \$3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

### Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, \$2.00.

### Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 163 pages. Price, \$1.00.

### Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, \$15.80.

### A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. Price, \$10.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

PRO BONO PUBLICO.

FISH COMMISSIONER JOHN W. TITCOMB sends us the year book of the Vermont Fish and Game League for 1894. Mr. Titcomb was the father of the League; he has always been its secretary, and largely to his individual activity in undertaking and doing, the people of Vermont owe the League's steady success and growth in usefulness. We say the people of Vermont, and we mean all the citizens of the State, for the benefit of the League is by no means limited to those who are its members, nor to sportsmen. In his preface to the hand-book Mr. Titcomb writes:

Many people of Vermont think the fish and game laws are made entirely in the interest of sportsmen. While this belief may be natural, it is a mistaken one. Many citizens are prone to consider all fish and game protective associations are organized for selfish purposes only. While this imputation is a natural one, it is untrue in the case of the Vermont Fish and Game League. Of its large membership only a small majority shoot and fish, and of those who do, many go to more favorable localities for their sport.

This is well said, and it might be urged with good reason for every organization designed to uphold game and fish protection, whether or not it be composed wholly of sportsmen. What is true of Vermont is true of every other State. Game protection is for the public good. The very fact that the community, through its representatives in the legislature, assumes to provide game laws is an admission and recognition of the principle that game protection is for the common advantage. If this be so, then the club, society, league, association or what-not, designed to enforce these laws, is likewise in its purpose for the common good, and should have public indorsement and support. The support should not be limited to sportsmen. Every public-spirited, yes, every common, every-day, well-intentioned if easy-going citizen, who makes no claim to public spirit, should do his part in upholding the voluntary associations of individuals who are banded together for game and fish protection, and are willing to do their part.

The time is coming when this will be more clearly understood and when the proportion of non-sportsmen members in protective associations will be more considerable than it is at present. We shall then not have the spectacle of otherwise intelligent men holding themselves aloof from protective effort, and perhaps even combating it under the mistaken notion that the interests involved are of the few against the many.

This thought should give comfort to the pioneers in the cause, and if it ever penetrates the noddles of the grouse-snarers and trout-netters it should suggest that for them the writing is on the wall,

BUFFALO MIGRATIONS.

THE remarks on buffalo migration printed in another column from the pen of "Forked Deer" are entitled to respectful consideration, for the writer is an old hunter whose experience goes back many years. There is not, and never has been, any question that seasonal migrations of the buffalo took place, but these migrations have been greatly exaggerated. It has often been asserted that the buffalo summered in Manitoba and wintered in Mexico, a statement which is manifestly absurd. Of course no one believes that on the Fourth of July all the buffalo of the continent were gathered together north of the United States boundary line in Canada, nor on Jan. 1 all these buffalo were to be found in Texas or Mexico. It is possible that at certain seasons of the year no buffalo were found in Texas, but it is certain that there was no time of the year when buffalo were not found in what are now the Northwest Territories, Montana and North and South Dakota.

Their migrations were no doubt governed in a measure by the seasons of cold and heat; but many other causes gave rise to their movements. As has been stated in a recent article on the buffalo, in Montana and the Northwest Territories the bands in winter moved up close to the mountains and in summer moved further out on to the plains.

Most plainmen believed that at certain seasons of the year all the buffalo moved to a certain range of country. This was naturally enough inferred from the fact that at such times all the buffalo to be seen were moving in one direction, and the further fact that at certain other times great stretches of country were absolutely barren of buffalo. There were migrations of the buffalo, and they were often on a vast scale so far as numbers go; but in the matter of distance covered, we believe that they were much less than has been commonly represented. They were not in any sense to be compared with the migrations of many species of birds, but were more like those of our Western deer, elk and antelope, which migrate, indeed, in the sense that they change their ranges with the seasons, but not in the sense that they necessarily go south at the approach of winter and north in the spring.

SNAP SHOTS.

DURING the first month in which the Society for the Prevention of Cruelty to Animals has had control of the licensing of dogs in New York city, 10,059 were licensed, as against 7,000, the largest number ever issued by the Mayor's Marshal. This does not show an increase of dogs in the city, but it proves that owners have confidence in the new arrangement, and are ready to cooperate in it.

A Constitutional Convention is now sitting in Albany to consider proposed amendments to the State Constitution, and advocates of various desired reforms are making themselves heard. If some one would get under way a "petition with boots on" for an amendment forbidding all legislative tinkering with the game and fish laws, other than at fixed intervals of twenty-five years, he would find himself uproariously supported, and would deserve well of his grandchildren.

In his report the other day of the work of the Massachusetts Fish and Game Protective Association in defeating the Gilbert trout bill, Secretary H. H. Kimball pointed out the necessity of organization for protecting the interests of the public in its fish and game supply. It was good doctrine. If Mr. Kimball should go out into New Jersey to promulgate his views, he would find at Greenwood Lake a capital field for missionary enterprise. There are hotels at the lake which depend for patronage largely upon the fishermen who resort to those waters for fishing. Under such conditions it might be taken for granted that the hotel keepers would join together and look to it that Greenwood Lake fish were protected thoroughly and at all seasons against the netters and snarers. Every bass is so much stock for the common advantage. If Greenwood Lake fishing is good, that means that scores and hundreds of fishermen go from New York and Brooklyn and Jersey City and Newark and other cities and towns. Each and every one of this multitude expends money for traveling, for hotels, for boat, for guide, for incidentals. In their fishing Greenwood Lake residents have a gold mine. But the multitudes do not flock to Greenwood Lake for the fishing, not after they have once been there

and have found the fishing poor. The fishing is poor because the fish are not protected. The fish are not protected because the very people whose self interest it would be to protect them are lacking in enterprise and common sense. Some of the hotel people have themselves taken part in the foolish netting of game fish; last week we reported the conviction of two of them by Game Warden Shriner and to-day we note another suit pending.

In the June Scribner's Dr. L. M. Yale draws from definitions of a game fish by Dr. G. Brown Goode these distinguishing characteristics: "A game fish should have beauty, sapidity of flesh, and a certain degree of rarity to excite the desire of the angler, as well as courage, strength, nimbleness and cunning to test his skill in a contest rendered the more even by delicacy of tackle."

Such is the ideal game fish perhaps, yet many which are counted game do not answer to all of these conditions. A muscalonge is neither beautiful to look upon nor is its flesh a delicacy, yet we should like to see any one presume to read it out of the list. A tarpon is beautiful, but no one pretends to esteem it for food. The skate has sapidity when served by a French chef, but it is not one of the beauties of nature. Black bass and trout are both beautiful and good to eat, but in many localities they have not in any sense a "degree of rarity."

An Asbury Park correspondent recorded his disappointment last week because after long and valiantly playing a big bass in the surf it turned out to be a shark. But if we exclude from the list sharks because they are deficient in edible qualities, should we not to be consistent exclude as well, for instance, sheephead in salt water and black bass in fresh, when they are caught by count-fishermen and after due display on hotel verandahs are dumped out on to the compost heap?

Here is a definition of a game fish: One which affords fun in the taking and satisfaction in the having.

Secretary Edward J. Banks of the Pennsylvania State Sportsmen's Association sends us a letter printed in another column relative to the proposed action of the Association toward revision of the game laws. One topic upon which the views of sportsmen of the State are invited is the prohibition of the sale of game. We know that there are in Pennsylvania those who hold the opinion that the prohibition of the sale of game would be three-fourths of the battle for protection. They are on the right road. The more thoroughly this subject is discussed the more clearly is shown the sound reason in FOREST AND STREAM's platform plank—the sale of game should be prohibited at all seasons.

The angler who is cunning enough to cast his lines in "fished out" waters at the proper interval after every one else has become disgusted and given them up, is likely to be rewarded. In such waters, given the go-by for a few seasons, the fish multiply and grow big, and then the first comer is the lucky one.

From many districts come reports of excellent trout fishing this year; and although the weather has been cold and unfavorable for fishing, the season promises to be a capital one for all kinds of fish.

The case of Fish Commissioner Follett, of Connecticut, who was found guilty of having netted trout in Massachusetts waters, has been settled, the defendant abandoning his appeal to the higher court.

Our San Antonio correspondent wires under date of June 5 that a band of fifty buffalo were seen last week in Val Verde county, Texas, among them a number of calves. The first duty of Texas is to provide safety for this remnant against the hunters who will beset them.

The notes on pound fishing printed elsewhere merit attention because they come from a practical man actually engaged in that mode of fishing, and because they show intrinsic evidence of having been written without passion and honestly.

Just as we go to press word comes to us that the new United States Fish Commission's hatchery will be located at Cape Vincent, New York.

## The Sportsman Tourist.

### ABENAKI GABE.

FREDERICTON, the capital of New Brunswick, is about eighty miles distant by water from the city of St. John, and has long been known as a central point for amateur hunters and fishermen. The St. John River is here about half a mile wide. Directly opposite the town stands a little group of huts in which reside the last of the Abenakis, that once powerful race of savages, who were so formidable to the English about the latter part of the seventeenth century that their name was a terror to Boston. In fact De Villebon, then Governor of Acadia, had communicated to the Court of France a project for the capture of that city by means of the Abenakis, who were to be aided by a small detachment of French troops.

One of the descendants of these dusky warriors was to carry me in his bark canoe from Fredericton to the mouth of the Nashwaasis on the east side of the St. John, about two miles above Fredericton, where we were to dine in the open air on the grassy sward, in our old accustomed way, for we had been friends for years. He was, by agreement, to bring the cooking utensils and I the food.

Promptly at 9 A. M. of May 21 my Abenaki friend was at the wharf in his canoe, in which I placed the provisions I had purchased, consisting of a pound of very fat salt pork, of which the Indians are very fond, a dozen eggs, two ounces of tea and a pound of family pilot bread. Gabe had his frying pan, small tin kettle, two tin dippers, a table-knife and fork and a large hunting-knife with which to slice the fat pork for frying.

My companion's full name was Gabriel Atwin; the soft language of the Abenakis, finding the "q" of Aquino too harsh, had replaced that letter by "t." The name was bestowed on Gabe's ancestor by one of those French Jesuits who labored so long and so hard to convert the Abenakis to Christianity. Little did the noble Count Aquino, or his most illustrious son Saint Thomas, think that their honored name would be borne 600 years after their decease by the inhabitants of a then unknown land.

Gabe, my pilot, cook and friend, must be 71 years of age. He is a well built intelligent looking Abenaki of medium height, his jet black hair is turning gray and his once active motions are becoming more deliberate with a advancing age. At the time of the Fisheries Exhibition in London, he was sent there by the Government of Canada; and as he was well known to a number of the officers of the English Army, having often hunted with them when they were stationed in America, great attention was paid to him. He told me that although he liked these gentlemen very much, as they were very kind to him, he did not like England. On asking him his reason he said, "There is no liberty there, if a fellow wants to go fishing or shooting they won't let him." The magnitude of London astonished him, and writing to a friend in New Brunswick he said: "Dear Bob, if you haint seen London, you haint seen nothin'." He told me also that the English were great thieves; he said that he could not leave a pipe, or a box, or anything outside of his wigwam (which was placed in one of the London parks), but it was stolen at once.

Gabe is not much given to talk, but when he does is often witty as well as instructive. Although a Christian, he yet places a certain amount of belief in the legends which have come down to him from the days of his pagan ancestors. One day when we were together in a canoe he said to me, "There must be something in 'Glooscap's' story, for I have seen his pack which he left on the shore not far from St. John; it is all turned to stone; and there is the hole that the mink made in it. And then I have seen in the rock at Machias the entrails of the moose that 'Glooscap' killed; they are of white rock and all twisted."

Once in a while he talks about the old Indians and their manners and customs. One lovely June day we were paddling a canoe near what he calls "Augh-pa-hack," the head of tide, six miles above Fredericton, and were passing close to a beautiful and fertile island, when Gabe said to me, "When I was a little boy I used to come here with my mother to get Indian potatoes. She dug them with a hoe and I followed her and picked them up. This was what our people used before the whites brought us the real potatoes." Being desirous of knowing what this root was of which these people had formerly made use, I asked him to find me one. Pushing the canoe to the shore of the island, he went up to a clump of alders and followed down the stalk of a climbing plant which had mounted to the top of these bushes, and when he came to the root drew it out of the soft, rich ground with his fingers, holding it up to me. The root was long and seemed formed of a series of small bulbs connected together like a string of beads. On examining the plant, I found that it either was or resembled the wild convolvulus. "We used to dry these, and they were our chief vegetable food," said Gabe. "I can remember also that my mother had a big stone mortar in which she used to pound or grind up the Indian corn which we used. This island (Hart's) was once a great place for the Indians. Here they played ball and ran races. I have seen their race course; it was marked deep in the sod, beaten down by their feet, and went all around the island. We had our church over there on the mainland, but it was burned by the English many years before I was born, so our fathers said."

Returning from this digression to our trip, the St. John River was very high; all the islands and all the low lands were flooded, and great elms and maples were seen standing as it were in one great sea. Toward these we directed our course, and paddling between and among them, came to a fringe of shrubs which bordered the shore of the Nashwaasis, through whose tops our canoe made its way until our progress was stayed by the upper pole of a submerged cedar fence. This, however, Gabe soon pushed to one side with his paddle and ran the bow of his craft up on the shore of the green sward, to allow of my stepping out, and of his removing the provisions and cooking utensils to the place where we were to dine. He soon gathered up some chips, made a fire and proceeded to fry some pork and eggs and prepare tea for our dinner. While thus engaged we had a discussion over Abenaki words. "I cannot understand Indian words as they are printed on the map," said he. "You call the river ten miles below Fredericton Oromocto. We have no r in our language. The name of this river is Wee-la-moooc-took—deep river. Cain's River, which runs into the southwest Miramichi, is called Mich-ma-we-we-la-moooc-took, or in English,

Micmac's Oromocto. Then you call a branch of the Nashwaak Cleuristic; that is not the name of this stream; it is Kul-loo-sis-sec; it was called so because there was a great eagle's nest on a high rock near the mouth of this stream. Kulloo, the eagle, was very big. The name of the brook means Kul-loo's nest."

While the meat was frying in the pan a huge heron slowly rose from the shore. "There is Kos-que," said he, "the old Indians were very fond of these birds, which make a great lot of nests, many families building near one another. About the 26th of July, when the young were big and fat, the old Indians would go to these places where the nests were and take the young ones out and kill them; and after they had tried out all the fat, which was saved to be used again, they smoked the bodies and so kept them from spoiling."

Our meal being ready, Gabe took a sheepskin with the wool on out of his canoe, where he had placed it in the bottom for me to sit on (and a capital thing it is for such purpose), and with it and a block of wood extemporized a chair. "I forgot the plates," said he, "but here is a piece of shingle." This answered the purpose just as well and we were soon engaged in discussing a rude meal, which was eaten with more zest than would have been one of a city chef's most artistic production.

EDWARD JACK.

FREDERICTON, May 22.

### STORIES OF EZRA.—I.

In the autumn of 1873 I came to Redfield, Iowa, and being pleased with the village and its surroundings, made it my home for four years. One very snowy morning in the first December I went into the harness shop to get some leather scraps to cut into gun wads. After some talk with the harness maker about shooting he turned to a tall, delicate-looking young man who was busy at stitching a trace, and said: "Ezra, would you like to go a-huntin'?" Ezra "lowed" he would. "Well," said the boss, "I reckon ye might as well go, an' ye better hitch the team to the sled 'n then maybe you can get some chickens." On this trip began my acquaintance with E. R. Ford—Ez, or Ezra, as everybody called him—and he proved to be such a delightful shooting and fishing companion that I seldom went without asking Ezra to go.

#### The Screech Owl.

In the last week of the following May Ezra said, "Let's go and get some of them young fox squirrels down in the bottom timber."

And we went. The squirrel shooting was fairly good, and after getting eight we sat down to talk. A screech owl came out of a hollow tree and sat on a limb a few feet away.

"That screech owl," said Ezra, "makes me think of something that happened when I was a little boy and we lived in Hoosier. One day the old gentleman gave me and Ike [his brother] an unmerciful whipping. For a wonder we had done nothing to merit such punishment this time, and we were so cut up, in our minds as well as on our backs, that we vowed to get even with the old man. Right back of our house was a big piece of woods that we had never ventured into, believing it was filled with all sorts of mysterious creatures, and that it extended clear to the other edge of the world. Ike said we would go into the woods so far that the old man could never find us, and we'd stay there till he grieved himself to death about us; and then we could come back and not be licked any more."

"We hadn't gone far into the woods before the deep shade and deeper stillness got us to feeling mighty queer. After we had gone about a quarter of a mile we stopped, too afraid to go any further, and both of us too afraid to speak. We stood there about a minute when we heard a sort of snapping or clicking noise, and when we looked around we saw five screech owls, the first we had ever seen, young ones I suppose they were, all sitting in a row on a limb, within six feet of our heads. One at a time they opened their big mouths and shut them with a snap; and one of them let out a long, quivering, tremulous screech that sent cold chills of terror all over us, and their big eyes seemed to look right through us. We were so paralyzed by fright that we couldn't move. Maybe we'd have been there yet if some noise had not made all of them look the other way. That broke the spell, and we lit out. We fell over logs, scrambled through briars, stubbed our bare toes against roots; but we never stopped till we got into the house. The old gentleman was hoeing potatoes, and we went out there and pulled weeds all the afternoon and found lots of comfort keeping close to him. We didn't say anything about it, not even to each other, and for a while after we went to bed we lay perfectly still, with the quilts over our heads. At last I whispered, 'Ike, what was they?' 'Spirits,' whispered Ike. 'What sort of spirits?' 'Spirits of boys that run off and get eat up with bears.'

"I've a great mind," added Ezra, addressing himself to the owl, "to shoot you for what your uncles and aunts did to me. I'll sh'y a stone at you, anyway."

The owl alighted on a stump. Ezra said, "Now, I'll just walk round you till you twist your neck off, and if you choose to commit suicide that way, your blood won't be on my hands."

Twenty times he walked around that owl, and while it kept its body motionless, the owl's face was always turned toward him.

"What do you think of it?"

"Begin to think Ike was right about their being spirits," said I.

"Well," said Ezra, "I'll tell you how he does it. He turns his head a little more than once around, and then turns it back again so quick you don't notice it. I'll start from square in front of him, and if you'll watch right close, when I get a little more than half-way round you'll see his head turn back and stop just where it was before." And knowing how and when to look, I saw it.

#### The Wood Duck's Nest.

After settling the owl matter, Ezra suggested, "Let's go over to the bayou. There are two wood ducks' nests over there. I want to see if they've hatched." As we neared the bayou he said, "There they are, up at the other end. See them? They haint seen us, and they're coming this way. Get down behind this log."

In half an hour they came quite close, and we had an excellent view of them; playing and feeding much as tame ducks do, except that the mother was ever on the alert for danger. There were sixteen of the young ones. They

did not look to be more than a day old, but they swam and dived almost equal to their mother. As it was open water and not more than a foot deep, I suggested that we catch the young ones and try to raise them. "We'll try it," said Ezra, "but if we catch one of them, we will do better than I've been able to do yet." As we arose from behind the log, the mother duck, with simulated lameness and warning cries, half flying and half swimming, went round a bend of the bayou, and every duckling disappeared under the water, hardly leaving a ripple. We rushed in where they had disappeared, and after we stood still a little while, the youngsters began to come up all round us; and now that they were not warned by their mother, did not seem much alarmed, but were too suspicious to allow us to pick them up, and would dive if we went too near them. Presently they were all gone; just where, we could not tell, and the old one came back and circled over head till she saw they were safely hidden, and then sought safety herself, and we went into hiding again, and were rewarded by seeing the old one alight on the water. After carefully looking for danger and seeing none, a few tender notes brought the young brood swimming to her from their hiding places along the bank. Then all swiftly and silently swam out of sight around the bend. "Now," said Ezra, "let's go further down the bottom and get some more squirrels, and as we come back we will find the ducks out in the woods, if we find them at all, and then we can get some of them."

An hour and a half later we were walking along the bayou, a couple of hundred yards beyond where the ducks had disappeared around the bend, when the old duck flew from the ground. "Now we will find those youngsters," said Ezra, "right where the old one flew from." It was a rather open place in the woods, with nothing on the ground but dead leaves, and not a duckling to be seen. I said they would not be there, but Ezra said they were there, and we would find them all in a bunch, and half covered with leaves. And he did find them, and just that way. Huddled together in a little depression in the ground, half covered with dead leaves, were 16 little yellow balls of down, the bright eyes being the only sign of life about them. "Now," said Ezra, "we will find they are a pretty lively lot, and the only way to get any of them is to single out one and go for him, and then if there is another one in sight, go for it."

We captured six, which we took home in the pockets of our shooting coats, and put them in a big box, but they climbed right up the sides of the box, and it kept one of us busy keeping them in till some boards were put over the top. We did not entirely cover the box for fear they would not have sufficient air, and next morning the ducklings were all gone. Whether they got out by their own efforts or were helped by a cat, we never knew.

O. H. HAMPTON.

## "Forest and Stream's" Yellowstone Park Game Exploration.

No. 4.

### THE STORY OF THE TRIP.

CHICAGO, Ill., May 24.—When the FOREST AND STREAM man stepped off from the train at Cinnabar there was an eager and a nipping air coming down off Electric Peak a slick-looking young U. S. lieutenant coming up the platform, an ambulance with four gray and woolly Army mules coming up the street, and Billy Hofer coming up into the car. All of which made a good environment. In about two minutes, after I had become well acquainted with Lieut. Lindsley, we all went over and got something to eat, and then started for the Post, the ambulance being filled with eggs, cabbage, oranges, side meat and other delicatessen beside Billy and myself, who were both good things. Lieut. Lindsley, upon whom devolves the commissary work of Ft. Yellowstone, followed later in a buckboard and a buffalo coat.

The first thing curious I noticed was the belt worn by the driver who negotiated the four woolly mules. He wore one of the U. S. blanket-and-canvas storm coats, better than a buffalo coat, which was girt close about him by this most formidable belt—an affair made of sole leather, over a foot wide, and fastened with three or four smaller straps and buckles at the ends. In place, this belt covered the whole body closely from the hips more than half way to the shoulders, and kept all air from flowing up under the clothing, as well as protecting the vitals by an impervious shield. When the driver threw this belt on the platform in front of the post office at Gardiner it sounded as if he had dropped a keg of nails. He took off his belt there so that he could drink something, I believe, it being too tight for that purpose when in place. The driver told me that the stage coach drivers and others exposed to the severe winter weather of the mountains could hardly endure the exposure without these big belts, which made them warmer than anything else they could wear—"a heap warmer than any overcoat," he said.

#### Wild Game.

An army ambulance is built for utility and not for fun. The windows are cut so low at the top that you can't get much good out of the landscape, if the latter stands on edge, as it does in this country. I nearly broke my neck trying to see the top of the mountains, and had to sit flat down on the floor while I was trying to see the antelope Billy was pointing out to me as we crossed the Gardiner Flats and went fairly into the great National Park. There the antelope were, sure enough, with their white harness hard to make out against the white background, though Billy's more practiced eye picked out group after group, while my big game eyes were getting their first practice after a long rest.

Beyond the flats, we began the steady climb up the Gardiner to the Post, the wheels crunching through snow in places apparently four feet deep. The river on our right came tearing and boiling down, a lovely stream. We saw some mallards contentedly swimming in a quiet part of the stream and they did not fly, though we passed within 20 yds. of them. The little purple water ouls were flying up and down the roughest parts of the water, at home in the turmoil, and singing sweetly and shrilly, apparently content in their wintry and forbidding home. We also saw a bluebird, away up there in the snow, and it did not seem unhappy or alarmed by the moun-

tains and the snows. In fact, even so early, one could see that in this enchanted land summer and winter go hand in hand the year round. The ice and snow are in spots parted by warm streams or broken up by large areas of warm ground. Nowhere in the great snow country can game winter as it can here, and for this reason the wonderful region should be forever preserved. Thus presently we came to the "Boiling River," pouring its hot flood out of the rocks into the Gardiner River, and near here we saw still more of the waterfowl and birds which winter in this part of the Park. If our cameras had been ready we could have photographed wild mallards.

The driver had that morning seen three mountain sheep (bighorns) on the rocks near the Eagle's Nest, the big ledge overhanging the road which will be remembered by all Park tourists, and we hoped that we should be fortunate enough to get sight of them, but it seems that they had taken fright at a dog which accompanied one of the teams. They are very often seen near the road, and are very fearless and tame. This is within three miles of the Park line, I believe. So much for summer-in-winter, and for protection of the game. The game knows the country and it takes it but a very short time to learn of the protection. There is no known place on earth now, outside of the Park, where one may approach within 30 yds. of wild bighorns without their taking fright on seeing one.

#### The Vestibule of Wonderland.

A bruising pull through the deep snow of the last hill, and we came out on the parade ground of the Post, the little flat valley nature has arranged as the vestibule for her house of wonders. The big Mammoth Hot Springs hotel, untenanted except by Manager Deane and his wife, stood opposite, and at the right were the "new quarters" of the Post. Beyond, Liberty Cap and the Minerva Terrace, the latter steaming in the cold air that circled every wondrous cauldron. Around, the mountains shouldered in closely, all white and shivery looking. Still beyond, valley and cañon and crag crowded together, unwilling to give entrance even to an eye, and apparently grudging even the scantiest knowledge of the treasures they had in keeping from the hand that made it all. Mount Evert's gray unshapely front, the hills back of the Terrace, the cañon of the Gardiner winding beyond the Post meadows, the peaks that flank the upper flats and edge the Golden Gate, all these many have seen brown and gray and black and green in the summer, but who has seen them white and solemn in the depth of the mountain winter time? Only a few. This and the sights beyond—the winter landscape of this wild tremendous region—the panorama of the Wonderland when wrapped in its robes of snow—to see that, to intrude upon the brooding mountains when they rest and plan their mysteries—where is a greater privilege accorded any traveler? It is the journey of a lifetime. What wonder that one thrilled even at the anticipation!

And now Capt. Anderson, commanding officer of the Post and superintendent of the Park, met us as we topped the hill where the "old quarters" lie, hauled us forth from the ambulance and took possession of the FOREST AND STREAM man forthwith as being a suspicious character. As I had supposed the programme was to sleep out in the snow every night after crossing the Park line, I was able to stand this for a few days. The Captain's cook is notoriously the best in the Army. As for the Captain himself, you would better get acquainted with him yourself.

At Capt. Anderson's pleasant quarters I remained from Saturday, March 10, till Wednesday, March 14, preparing for the trip into the mountains, and learning about the Park, its game, its system of patrol, the pleasant and the harassing nature of some of the duties connected with its supervision. I could learn something of this, something of the difficulties of the work, something of the inadequacies of the equipment to the task, but never until I was actually into the wilderness and had seen the terrors of that winter reign, could I realize the magnitude of the task asked at the hands of this handful of devoted and hard-working troopers. Under the old regime this was a task almost too hard and too thankless to ask of any men; yet from officer to private I can say I never heard a murmur of complaint, and among privates as well as officers there seemed to exist a singular enthusiasm for the arduous and sometimes almost unumitary labors asked of them in their duty of protecting the Park. Now, thank Providence, there is a better law, and the "snowshoe cavalry," as some of the ski-running troopers call themselves, will not have only their labor for their pains.

The Yellowstone is a two-company post, and is probably one of the busiest of the mountain posts in the winter. It has an unusually large number of good snowshoers in its force, due to the scouting trips of earlier years and the ski practice which officers encourage as so useful in this mountain work. Even the children wear skis at Ft. Yellowstone, and it is no rare sight to see four or five little pairs of skis on the front stoop of a house. Most of the officers know a bit about ski running, and at the time I arrived at the Post two of them, Capt. Scott and Lieut. Forsythe, were absent with the Haynes photographic expedition, of which I shall write later.

#### Photographing Antelope.

Capt. Anderson has a most pleasant family of young officers with him—besides those above named, Port Surgeon Gandy, and Lieutenants Daniels, Nance and Lindsley. The terms army officer and sportsman are synonymous, and in the case of Dr. Gandy we found that a love for amateur photography was also included. The result of this was that Dr. Gandy, Billy Hofer and I went out on a photographic still-hunt for antelope on the Gardiner Flats the first clear day we got. We found the antelope abundantly enough and obligingly tame, but the wind was so high we had trouble to get good pictures. Dr. Gandy often set up his tripod deliberately within good range of the beautiful creatures, and took shot after shot while I lay on the ground and tried to hold steady the vibrating legs of the machine, but we got only one picture of any value. Billy had a long range special outfit, and had some beautiful shots at antelope standing, marching, trotting and running, but the Smithsonian Institution, to whom he sent the negatives for development, has calmly absorbed them and made no sign so far as I know.

We saw, probably, the entire band of the Park herd of antelope, about 400. Often they crossed in little bunches not 75 yds. in front of us, and we had a unique and valuable opportunity of studying them. There was one old

leader, a buck, which was a distinct trotter, and rarely broke his long-reaching trotting stride, although the entire band behind him were on the run. I will back this trotting antelope against any other trotting antelope on earth, and it's a "moral" for the Gardiner Flats beast.

This was the beginning of the spectacle of the great game in the Park, a fraction of what we were to see. Every day we heard of the sheep down by Eagle Nest, and every day that I was at the Post, without exception, we saw a band of elk on the high bare ridge back of Minerva Terrace. These Capt. Anderson calls his "pets," and daily he watches them from his window as he sits and reads. Often they come lower down, and once he saw forty elk just back of Lieut. Lindsley's quarters. Sometime, too, a herd of blacktail deer will come down the hill almost into the Post limits. The Post is located at a comparatively low altitude, and the snow does not lie so deep there as in the upper Park. Once we had a Chinook, and under the breath of that mysterious wind the snow settled and fled in the most surprising manner. This was in early March. We had purposely postponed our trip till March, as by that time the snow has become less fluffy and more solid, therefore better for snowshoeing. Let no one suppose that March means spring in the Park. The snow envelops everything there till June. While we lay at the Post it snowed almost every day. A drift 12 ft. high lay along the walk in front of the officers' quarters. Around the great springs of the Minerva Terrace the white garment of winter was apparently 6 to 10 ft. high, and in drifts we could only guess how deep.

#### Warnings.

Of course it is hard for the summer tourist to realize the difference between the Park in summer and the Park in winter. In the summer one rides through the Park in comparative ease. In the winter one cannot even walk. No friendly pack horse can lighten one's load, and if he is tired he cannot swing into the saddle or loll upon a wagon seat. Every inch of the way must be traveled on the snowshoes, and when a man's own muscles cease to work he ceases to advance. There is no way of lightening or evading the labor, and emphatically it is every man for himself. These things were pointed out to me by friends. Before I left Chicago one friend almost besought me never to go into the Park in the winter, as he had once been caught by a snowstorm there and hardly got out alive. As I approached the Park these warnings became more frequent and more ominous. At Livingston guides and old-timers shook their heads, and civil engineers advised me not to go in. At Gardiner, as I learned later, bets were freely offered that our party would get no further in than the Swan Lake flats, beyond the Golden Gate. Even at the Post there were not wanting those who said quietly, "I do not envy you the trip." Here, then, one was placed against the first edge of the enterprise, and began to realize something of the quality of the work ahead.

#### The Outfit.

Billy and I had brought in both the Canadian web shoes and the Norwegian skis, also a toboggan. We thought at first of using the web shoes and pulling the toboggan, but Billy later decided very wisely that it was better to stick to the skis, almost universally used in the Rockies, and to leave the toboggan behind, carrying everything on our backs in packs. The wisdom of this arrangement was most obvious later on. The Haynes photographing party started with a toboggan, but abandoned it at the Cañon. They learned that it took the whole party to get the flat-bottomed thing along. It is next to impossible to pull any weight behind the ski, and if one wears webs, and so gets traction power, he can not take the long runs down hill by which so much of the time is made in ski running. All the mountain men seem to unite in condemning the web or Indian shoe for this mountain work. They say the ski is far easier and faster.

For clothing, Billy's advice was followed implicitly. We wore heavy wool underwear, wool trousers, canvas overalls and canvas leggings. The underwear was supplemented by a lighter wool undershirt, over which a blue flannel shirt was worn. A canvas vest came on top of that, but no coat or overcoat was worn. Of course the latter would have been an impossibility, and the coat was replaced by a light canvas "jumper."

"You've got to have canvas to break off the wind," said Billy, "and to shed the snow, and you've got to have plenty of wool underneath to keep you warm. You'll find that you won't want much on while you're traveling, but when you stop you get cold mighty quick."

This I found to be true. Indeed, I discarded my fine heavy wool overshirt, made like a fireman's shirt, on which I had rather prided myself. I found it too warm to wear while shoeing, even in the coldest weather. When I came out from the trip, indeed, I was wearing only one suit of underwear and a light cotton drilling shirt, under my canvas waistcoat and jumper. While on the trail, even these upper garments would be worn open, though often the thermometer was below zero. In shoeing over the mountains one uses every muscle of his body at such intense pitch that he gets all in a glow of heat. To avoid the chilling out when we stopped, I carried in my pocket my elegant fireman's shirt and a heavy sweater, which I slipped on at once when we paused even for a little while.

By Billy's wise advice, we wore wide felt hats of the Western type. These were better than caps, as they kept the snow from getting down the neck. In extremely cold weather we tied up the ears with a large silk handkerchief.

Of course we wore belts, for a belt is warm as a coat. We carried no weapons except a straight-bladed butcher knife apiece, for we were not hunting and needed to trim down every ounce possible in order to succeed in our mission. On our hands we wore soft castor gloves, unless the weather was very sharp, when we slipped on over the gloves heavy calf mittens, fleece lined. In travel, the gloves, mittens and handkerchief, with maybe a strip of burlaps for strings, would be often tucked into the belt when not in use elsewhere, and Billy always wore his tin cup at his belt. When Billy got into full regalia, big camera and all, he made a wild sight, and I often teased him to stop and let me photograph him, though he always objected, and I fairly had to do that by stealth.

#### The Importance of Feet.

The feet are the main thing to be cared for in snow-

shoeing, for they are ground deep in the snow all day long, and in a climate where the thermometer sometimes drops to 45° below zero it is not hard to freeze the feet. The snowshoer keeps his feet carefully clean, washing them in cold water sometimes. He may wear wool socks, common broad shoes, and overshoes, surmounting the whole with canvas leggings—Billy always preferred the buckled leggings, as easier to handle when full of ice and snow—or he may use the heavy "German sock" (a felted wool sock nearly half an inch thick), which is drawn on over the light sock, and then surmounted by an Arctic overshoe. If the German sock is warm, no leggings are required, the trousers being tucked into the sock, which is drawn tight about the calf of the leg by a string. The sock sheds snow very well, and is soft and easy to the foot. Nearly all the shoers about the Post prefer the sock overshoes. Billy insists that the leggin keeps the foot in better order. It is almost impossible to keep the feet dry anywhere, for the snow water will grind through the best Arctic overshoe in a few days. Lieut. Forsythe found that if he wore a light pair of calf shoes inside his German sock he was more comfortable and had better control of his shoes. For myself, I disobeyed Billy's orders, threw away the shoes which had begun to give me a sore heel, and from that time on used the following outfit for my feet, which I found warm and comfortable: First I wore natural wool socks, light, then a pair of Indian moccasins, then a pair of heavy gray army socks, then the Arctic overshoes and leggings, the latter of the army cut, and very good as I found. A sportive dog carried off my buckled leggings at the Post, and lost them in the snow.

Two pairs of colored glasses were taken along by each man, the bows being carefully wound with silk to prevent freezing the face where the steel touched. Without these glasses the glare of the snow would soon render one snow-blind.

A last item in our equipment was a wide canvas patch cemented on the front of our overshoes, where the toe strap of the ski passed over, used to prevent the chafing of the strap on the shoe, which is quite severe. A pair of Arctic shoes lasts only a few days in active shoeing. We each took along an extra pair. We used heavy, double-buckled, high overshoes, not so heavy as the cavalry shoe, but heavier than the ordinary street overshoe.

This was our outfit as to dress, the result of experience and not of theory. I mention it in detail because, though we found it amply comfortable and excellently adapted to the needs of the trip, it seems ridiculously light for work almost Arctic in its nature at times. It should be borne in mind that ours was a walking and not a riding trip. Furs and heavy wools we could not use, because we could not carry them. Schwatka's outfit fell to pieces because it was too heavy. Every ounce was figured on by our party. Yet light as we started we came back lighter yet at the end of the 200 miles, and at the close of our most eventful and most delightful trip.

What we carried and how we carried it, and how we engaged in combat with the fiery untamed ski in the early stages of the trip, will do to speak about the next time.

E. HOUGH.

## Natural History.

### BUFFALO MIGRATIONS.

Editor Forest and Stream:

A writer in FOREST AND STREAM some time ago expressed the conviction that the buffalo were not comprised entirely or nearly so of one "main herd," but consisted of "several large bands, only one of which could be regarded as the main herd." In support of this theory he goes on to state the probable boundaries of their several ranges, and adds, "It is not now supposed that the bison emigrated annually from Manitoba to Mexico, but perhaps the Texas bands ranged as far as the Canadian River, etc., etc."

It is possible that this may be the generally accepted view at the present day, but this was certainly not the belief entertained by those best qualified by experience to speak with authority upon the subject thirty years ago, before the skin-hunter had entered upon his nefarious career, or a rail had been laid west of the Missouri River. I was in the buffalo country as early as '63, and during the four following years I traversed their ranges from southern Texas to the Gallatin River in Montana; and at that date I know that the buffalo could only be found in certain localities at certain seasons. One summer during that period I crossed Texas, its entire breadth from the Gulf to the Staked Plain, and more than half its length from north to south, and never saw nor heard of a buffalo. All the cattlemen and rangers who were constantly hunting cattle and ranging for Indian horse thieves over every portion of the State, declared that they had all gone north. Getting into the Indian Territory in the early fall, we found a few old bulls—never more than three or four in a bunch—unmistakably stragglers like those in the wake of an army. I do not believe there was at that time a single buffalo in the State of Texas that was able to get out of it, and only a few outcasts here and there in the Territory, as we crossed it at a point well supplied with grass and water, and at a distance from all the Indian settlements.

A brief mention of these facts was made by me in an article you published, headed "A Stampede in a Storm."

Texas was, geographically speaking, an ideal buffalo country, but the buffalo is decidedly an epicure, and its grasses were to his taste far inferior to those of the north. The great herd crossed the Platte twice annually, going north in the spring and south late in the fall, but it never tarried there; and of the thousands of immigrants which passed along on both sides of the river at that early date bound for Denver, Salt Lake and California, not one-half of them met with a single buffalo. The Republican Fork and the Smoky Hill River were, however, favorite winter ranges and preferred by them to any portion of Texas, for the quality of the grass on those rivers was better than it was either further south as along the Platte. It will perhaps be remembered that while the Indians readily made treaties permitting travel by wagons and later by rail up the Platte, they fought both propositions bitterly on the Smoky Hill.

But the home par excellence of the buffalo, the land where he was at rest and away from which he was never

contented to stay, was the great valleys of the Yellowstone and the upper Missouri. Here the sweet nutritious buffalo grass, deprived of which he was never happy, grew in greatest abundance; down every mountain side of that favored land tumbled crystal streams of most refreshing coolness, where he could quench his thirst and stand immersed for hours in the heat of the day, for although able to endure with impunity a climate of arctic rigor, he suffered greatly from heat and insects. Here was his elysium, the land of his birth; and it was only when the deeply drifted snows of winter deprived him of his sustenance that he reluctantly turned his face toward the retreating sun; and as many another wanderer who, having once cut loose from the charmed circle of home, finds no tie to bind his wayward feet, so the buffalo drifted southward, even to the land of the Aztec.

But he did not stay there. He never forgot that he was but a visitor in a strange land; and when the great white winding sheet of winter rolled away before the soft breezes of early spring, and the tender grass springing into renewed life began to tint the long swells of the prairie, then did he gather together his countless cohorts and sweep northward in a mighty host to the sources of those great rivers that flow both eastward and westward to the sea.

These migrations were at that time as clearly defined and as well understood as are those of the wild geese; and the old frontiersmen always knew about where the herd was at any particular time, although large sections of the range were then overrun by hostile Indians who never hesitated to exterminate any party not sufficiently formidable to make the success of an attack problematical.

I can readily understand that after the restless march of civilization had thrown its railways across their pathway and the skin-hunter had made their lives but a constant series of alarms, the buffalo's habits may have become somewhat modified. The preservation of life is the strongest instinct with all animated creation, and every other impulse or habit, when put to the test, will become subservient to that; so it is very probable that there existed for a time quite large herds on each side of those trans-continental thoroughfares which had given up about everything except the instinct of self-preservation. It is true there were small bands that remained permanently in the Colorado parks, but they were regarded—no doubt erroneously—by the mountaineers as a distinct race, and were the only ones that received the proper name of bison, and were said to be much smaller than the plain buffalo. Then there was still another class called the "timber buffalo" that was said to be not only larger but much more formidable than either of the others, whose habitat was in the great forests on both sides of the line in the vicinity of Fort Benton; but neither of these were sufficiently numerous to cut any figure in this discussion. FORKED DEER.

#### MILD AND TOUCHY RATTTLERS.

THE last two rattlers had been mild-mannered; one of them had witnessed my approach in such a dozy state that although I stepped within a foot or two of the head of one without perceiving him, until I had passed and my boy further in the rear had called my attention to him and to my narrow escape from stepping directly on him, yet he continued to lay perfectly still, coiled with his head resting on the coil, without the faintest flutter of his rattles, until he finally started to slowly crawl away. Then a well directed blow from a stick closed his career. Not long afterward the second one lay close by the trail in the same quiet state and did not move at all; and when hit over the head with a stick did not even uncoil. So I was hardly prepared, when strolling among the scrub looking for timber brought ashore by the gale not far back from the beach, to hear a sudden warning *w-h-i-r-r*, which, once heard, can never be mistaken; and I came to a very sudden standstill until I could locate the direction of the sound, which is sometimes more difficult than might be thought. A moment later I saw the snake with head and tail erect, not more than 5 ft. away, coiled and half hidden under a bunch of palmetto scrub, his body moving with sinuous motion, and his whole attitude one of defiance. I suppose that my walking about in his neighborhood had thoroughly waked him up, and he did not propose to permit my nearer approach without giving me fair warning of what I might expect if I came any closer. He rattled none too soon, for another step, as I was walking directly toward him, would have brought me within reach of his straightened coil. As I had no stick long enough to make it safe to approach him, I threw a cocoanut and some pieces of wood at him just to keep him excited and on his guard until I should come back, for they usually watch for some time something that has disturbed them; but when I returned he had disappeared.

The colored people's saying, "Never hunt a rattler," is sound advice; that is, when you hear the whirr of the rattle don't look for him if you don't see him, but back right away from your standing place, for he is in your very immediate proximity. Not long ago the little 2-year-old daughter of a neighbor was noticed by her mother walking toward something moving toward a corner of the house; and to the mother's horror the moving object proved to be a rattler in the act of crawling under the house; yet although the child was close upon it, it did not turn to attack but kept on crawling away until dispatched.

A man was bringing up some stuff for me on a wheelbarrow from the river; and on his return his barrow wheel passed over a big one near the tail as he lay stretched across the trail, most likely in the torpor following a hearty meal of rabbit, for he made no sign of being disturbed.

A friend was in his field of pineapples, and stooping to clear away the dead leaves from about a scrub palmetto, felt something cold and crawling beneath his hand; and was startled to see the head of a rattler, suddenly disturbed, appear ready for battle. It is needless to say there was a quick retreat to a safer distance. He imagines he can feel those cold scales yet when he thinks of it. A man not far from him leaning over the fence on tip toe to see something on the other side, felt something crawling from under his feet; and found he had been standing on a rattler, who was trying to crawl away without making any attempt to strike.

I take it that the fascination about these reptiles lies largely in our consciousness of their deadliness, for looking at one coiled and apparently asleep, you are yet entirely

conscious of the fact that death, grim, certain and terrible, lies within those coils; yet it is greatly to his credit that this terrible weapon, this original hypodermic needle, carrying the very summons of death, is only used in self-defense, or when he deems at least himself in danger of attack. I used to doubt the stories told of their spitting or throwing their venom when too far distant to strike, but I have learned of several well attested cases of the venom being thrown some distance.

A large and valuable horse belonging to Mr. Murry, of Oak Hill, was bitten last winter and died in a few hours. He stepped on or close to a snake while his rider was hunting deer. W.

ATLANTIC, Fla.

#### THE SUICIDE OF A SERPENT.

ARE venomous serpents susceptible to their own poison? In other words, what would be the result if one of them should happen to bite himself—would it kill him? Indeed, it would.

I remember seeing that very thing happen once, when I was in the northern part of Wyoming, north of the Rattlesnake range of mountains. We had been making a survey for a wagon road from Rawlins, a town on the Union Pacific Railroad, northward to Fort McKinney, and had finished the work and were returning, and had reached the place I have described. The region seemed to be wholly given over to the occupancy of prairie dogs, burrowing owls and rattlesnakes. I never saw so many snakes anywhere except in the swamps of Louisiana during an overflow. You could see them crawling about in all directions, and they were constantly springing their rattles in the grass under foot, and frightening our horses, for you know a horse fears these creatures quite as much as a man does. In riding along I happened to see a particularly large rattler, sunning himself on a spot of bare ground, and tried to ride up near enough to strike him with my quirt. But my horse was afraid, and I could not make him approach the snake. I did not blame him very much either, for the old *Crotalus* threw himself into a coil, raised his head, sounded his rattle and prepared to assume the offensive as soon as he saw us. Finding that I could not reach him with my short quirt, I rode over to one of the wagons, and got from the driver his long four-in-hand whip, and with this I returned to the snake. I found him about where I had left him, and when he saw me he tried to run away. They are sluggish creatures, however, and can not go very fast.

I had a fancy to tease him a little, and I swung the whip so that the end of the lash in falling would tap him

THE SUICIDE OF A RATTLESNAKE.  
Drawing by Capt. D. C. Kingman.

gently on the nose. As soon as he felt it, he snapped back like a watch spring into a coil, sounded his war note, and turned his head quickly from side to side to discover his enemy, his forked tongue darting incessantly from his mouth. I was some 20 or 30 ft. away, keeping perfectly quiet, and he did not appear to notice me at all. I fancy their range of vision must be very short. After a few minutes, he lowered his ugly head to the ground and prepared to glide away in another direction. I let him get fairly started, and then tapped him as before, and again he coiled to strike. This was repeated a number of times. The snake always started away in a new direction, only to meet that uncomfortable and exasperating little tap. After each stroke he would prepare to fight and would look in vain for his assailant; and with each encounter his anger seemed to increase.

At last, having tried unsuccessfully every avenue of escape, he became beside himself with rage. His rattle buzzed incessantly. He raised his head nearly half his length above the ground, and swayed from side to side. His eyes glittered like jewels, and his forked tongue flashed from his mouth like miniature lightning. His head became broad and flat, and his whole body seemed to swell with venom. Suddenly, in an access of fury, he turned his head, and with the full force of a swinging blow of his neck, like the down stroke of a sabre, he drove his fangs into his own body. He kept his hold and did not withdraw his fangs. His body writhed and twisted for an instant, and his muscles contracted violently once or twice. Then his head sank down, the fire faded from his eyes, his coils relaxed, and he was dead.

I was astonished. I did not think it was possible that the poison could be so instantly effective in a creature of such sluggish circulation.

There can be no mistake about it, he meant to kill himself, and he did it, too. Of the last I have the most satisfactory proof, for I picked him up and examined him carefully from one end to the other. There was not a mark (save the bite) or a bruise on him. The light strokes that he had received from the whip were not enough to hurt him, still less to kill him, yet he was dead; for I put him in my saddlebag and carried him to camp, and then skinned him, and I am sure he could not play possum through all that.

Yes, he bit himself with malice aforethought, knowing perfectly well what the effect would be; and his act can only be regarded as the suicide of a serpent.

CAPT. DAN C. KINGMAN, U. S. A.

#### The English Sparrow Eats Grubs.

ITHACA, N. Y.—The English sparrow has a mission here despite the verdict of its detractors. A farmer tells me that in breaking up a piece of sod ground this spring he

noticed innumerable English sparrows carrying large white grubs, so common to sod land, away to their nesting quarters, presumably to feed their young. The sturdy fellows would often take two large grubs at a trip, and the number of worms removed by the sparrows during the plowing of the field would have been sufficient, my friend assures me, to have destroyed an entire planting of corn. M. CHILL.

#### Lynxes and Their Names.

APPARENTLY there exists considerable confusion regarding the various forms of the genus *Lynx* of North America. The prevailing impression that a wildcat is something quite different from a lynx is a mistake and has given rise to a great deal of needless controversy. Commercially speaking *Lynx canadensis* is the lynx, though scientifically all forms of the genus *Lynx* are lynxes. In New York State the common wildcat (*Lynx rufus*) is found in the same territory with *Lynx canadensis*, the latter there known as lynx, the former as wildcat. In the coast mountains of California we find the ranchmen generally separate the adult cat from the younger individuals, calling the former (which usually possess decided ear tufts and lengthened hair about the cheeks) lynx, while the less developed individuals are known as wildcats. In this opinion they are as firm as the Rock of Gibraltar. In the Rocky Mountains, from Arizona at least north to Montana, perhaps still further north, ranges the plateau cat (*Lynx baileyi*). In this form the fur is soft and quite long, approaching in character *Lynx canadensis*. It stands about midway in general appearance between *Lynx rufus* and *Lynx canadensis*, and is frequently spoken of commercially as lynx.

It is surprising how the wildcats vary in pelage, and so far as I have been able to make out this is not determined by age or sex and not nearly so much by locality as many suppose. Of course the fur is thicker, longer and softer from the more northern individuals, but of color we have a great variety right here in the Santa Cruz Mountains. Judging from appearances the domestic cat of these mountains frequently crosses with *Lynx rufus maculatus*. Still it is not to be supposed that our domestic cat is a descendant from the so-called North American wildcat, the ancestor of pussy being in all probability the European wildcat, which is very similar in general form, not excepting the long tail.

GEORGE B. BADGER.

[In the central Rocky Mountains *L. rufus* or *L. baileyi* is commonly called bob cat, and *L. canadensis*, lynx.]

#### Birds in the Storm.

ITHACA, N. Y.—One of the features of the storm which has held sway throughout this region for the past week was a terrific wind that prevailed last Sunday, the 20th. It wrought disaster to the song birds, especially to the young birds still in the nest and unable to fly. Reports have come to me during the week of eggs destroyed and young birds killed and drowned in such alarming numbers as to make the misfortune of our feathered friends one of serious import. A friend of mine found an upturned robin's nest late in the afternoon of the 20th, partly submerged in the water. Three young robins were found under the nest, and by craning their slim, downy necks to the utmost, had managed to keep their heads above water. The nest was carefully removed to higher ground and the chilled, water-soaked birds, partly wrapped in a dry cloth, were deposited therein. The next morning the mother bird, with an air of matronly dignity, sat covering the nest and its precious occupants. I have no doubt that very many acts of kindness in behalf of the birds were performed on that eventful Sunday afternoon.

M. C. HILL.

#### Woodcock Killed by Telegraph Wires.

CUPIO, Ky., May 28.—Through this little valley the Postal Telegraph line runs. About two months ago a neighbor of mine brought me a bird and asked me what it was. It was a woodcock. He explained that he had seen it fly against the wires and kill itself. Last Friday evening I was walking down the same line and found another killed in the same way. It seems these birds are all killed about sundown. I do not see or hear of other birds being killed in this way.

I am told there will be a large amount of fish put in Kentucky waters this year. We have a good supply of quail here, but in the hunting season they go to the hills that are covered with timber and bushes, and it is a difficult matter to bring them to bag. R. B.

#### Woodchuck in Trees.

HAINES FALLS, N. Y., May 30.—I note article from W. W. P., Springfield, Vt., in yours of June 2, entitled "A Woodchuck up a Tree." I was born and spent my boyhood here in the Catskill Mountains, and with my "woodchuck dog" have caught many a woodchuck "up a tree," but those so caught were found only in timber and were perfectly black in color. I have examined them carefully and find no structural difference from the gray ones, except that usually they are smaller, and I have seen them in no other locality. While out trout fishing yesterday my beagles treed one in a sapling about twenty feet high and not over two inches in diameter, and having no branches for fifteen feet from the ground. I have never seen the gray one climb a tree. JOHN W. RUSK.

#### A Large Eagle.

NEWPORT, Vt., May 25.—"Hal" Wells, of this place, recently caught an eagle in a steel fox trap which measured 7 ft. 2 in. from tip to tip of wings. It was a female of what is known as a "bald eagle," and although some rather rough handling was necessary to get it into a cage it was uninjured. Davis & Robitelle have had it on exhibition in their window, where it has attracted no little attention. ROB.

#### "Old Sam" on "Forest and Stream."

FOREST AND STREAM is in the top notch of its clan. In cleanness, clearness of conception, force and fearlessness of expression, earnest devotion to its mission, breadth of ideas, freedom from crankism, purity and diversity of correspondence, and in scientific investigation and ceaseless enterprise it covers the entire ground. The pulse beat of its pages is steady as the pendulum stroke of time, and to many an active and retired sportsman it is the mirror of events that form the brightest, most exciting and happiest hours of his life. May its light never cease to shine. SAMUEL R. SMITH.

## Camp-Fire Glickerings.

"That reminds me."

### A Hustle for a Trout.

WE were "chubbing." Had willows for rods and fresh meat for lures. But though we cast in many pools our baskets were empty. The noon was mild but two hours later the air was zeroic. Boreas's needles, keen and searching, were setting our teeth to chattering, and we had all had about enough of it. We were all, as a last attempt, casting in the deep pool below the dam. I had just clambered over the log-chute and cast my lure near where Nephew was fishing when off went my lure, down bent my pole to the very surface of the stream and I gave a lurch to throw the voracious chubby over my head. My frail willow pole bent under the weight and as it came to the surface it seemed like an eel, so lengthly was it. The fish was lifted in air but its weight broke the hook's fastening and I saw it was one of the first trout I had ever caught from a brook. It fell just at the water's edge and I, frantic at the thought of its loss, sat down on it, or made the attempt. Such a scramble as I had with that slippery, wiry, elastic, floundering trout. My legs, coat-tails, hands, knees, were all brought into commotion, so Nephew and Niece aver. I was too busy to take any note of attitudes. But I actually so confused and embarrassed that fish with my affectionate attentions that it kindly jumped out on dry land. And those young people stood there roaring with laughter. Said it was better than a circus. Said the fish could easily have escaped but it wanted to force me to an involuntary bath in that iciest of waters for yanking off its jaw in trying to throw it over my head. That evening's walk to camp of a mile and a half, my lower anatomy incased in ice, with the wind howling and whistling about in a derisive way, wasn't as balmy as I could wish, but we had a trout that made a fair supper for three. CAREY.

### A Dicker with P. Z.

It happened twenty-five years ago and yet the affair is as indelibly stamped on my mind as if it only happened yesterday, and here is the story as I told it at our camp-fire last fall: The tall dark pines were overhead, the white tents beside the river glittered in the firelight, while high over all floated the silvery moon round and full, reminding one of Bret Harte's lines:

"Above the pines the moon was slowly drifting,  
The river sang below,  
The tall Sierras far beyond uplifting  
Their minarets of snow."

I give real names and places because some most interested in the story joined the silent majority long ago, while others are old men to-day. We were boys together in those days, for Bill Weeks and I attended school together when compelled to and hunted the same woods and fished the same streams whenever opportunity offered.

Among the villagers was a man named P. Z. Romain, who kept a store to keep him out of mischief, he said, because he could well afford to live on what he had previously accumulated. "P. Z.," as every one called him, nicknamed Bill and me "the Siamese twins," because we were always together, and that name still sticks to us among the old school chums of a quarter of a century ago. One of P. Z.'s delights was to stand at his front gate of a summer's evening, smoking a long church-warden. A full florid face closely shaven and a goodly-sized corporation marked him as a man who lived well.

Highholders were plentiful down in the fields close to Cooke's bush, and so the Siamese twins started out to shoot them, for they made excellent pies, and if we plucked and cleaned our game our parents with great consideration always cooked and helped us eat them. We had poor luck that afternoon, for we only shot four—two apiece.

As the shadows lengthened in the hazy summer evening Bill and I separated, each taking our quota of the day's game. Mine I tied together with a feather through the bills (the lower mandible) and hung them on the ramrod of my old single-barreled shotgun. Then I proudly marched down the principal street of the village. As I passed P. Z.'s he was standing at the gate smoking as usual. P. Z. never took much notice of me but on this occasion he was all smiles. "Hello, Willie," said he, "where did you get the woodcock?"

Now be it understood that I did not say they were woodcock in as many words, but when he called them such I did not deceive him, and as the lawyers would say to-day I was acting a lie if not telling one. "Down by Cook's bush," I replied, and kept on walking.

"Hold on, Willie," said P. Z., and Willie "held on." "I'll give you a quarter for them," said P. Z.

It was all Willie could do to keep from laughing, and yet he managed to control himself as he replied: "No thanks, we'll eat 'em," and Willie made as if to go on.

"Hold on, Will."

"No thanks, Mr. Romain, if they are worth that to you they are to our folks."

"Willie, I'll give you half a dollar."

Here was a great temptation. Thirteen cents was a fortune for either Bill or me in those days. We expended it about like this: Five cents bought 2oz. of powder. Another five transferred 1/4 lb. of shot from old Mr. Parker's tin shop to our pouches, while the remaining three cents bought gun caps. But here was four times that amount and the temptation was great, in fact the twenty-five cents would have been accepted, in default of anything better. "All right, Mr. Romain," I replied, "take them," and P. Z. transferred a bright half dollar to one of the Siamese twins.

Later on Lige Weller, the village blacksmith, and the best con hunter in the county, was passing when another dialogue occurred.

"Good evening, Lige."  
"Good evening, P. Z."  
"I've got a couple of beautiful woodcock, Lige."  
"Didn't think there were any yet."

"Oh, yes, I'll let them hang for a day or two; keep 'em till Sunday and have 'em for dinner. I'll show them to you." Then P. Z. went to the house and came back with the two birds.

"Shoot 'em yourself?" queried the blacksmith, with a twinkle in his eye.

"No, bought 'em."

"Who from?"

"Willie Fox."

And then Lige went into a fit of laughter that made him almost as red in the face as P. Z. was. At last Lige found his speech. "Bought 'em from Willie, did you, one of the Siamese twins?"

Yes."

"How much?"

"Half a dollar."

And then there was another roar from Lige and P. Z., who by this began to think something was wrong, got even redder in the face than usual, if such were possible.

"They're not woodcock," said Lige. "Why, you old fool, they're highholders and the fields are full of 'em. Did Willie tell you they were woodcock?"

"Don't know as he did," was the reply, "but I called 'em woodcock and he didn't say they weren't and I gave him half a dollar that was half a dollar."

"Well, you're sold," said Lige, and at once Lige proceeded to tell his cronies of the joke Billy Fox played on P. Z. Of course Billy kept out of the way of P. Z. for a few days, but from fear that legal proceedings might be instituted to secure the return of the fifty cents he spent it without delay with old Mr. Parker. A few days later P. Z. and Willie met, when P. Z. said: "Here, Willie, is ten cents for you, and when you shoot woodcock that Lige Weller says are so, I'll pay you well for them."

### In a Salmon Berry Swamp.

While I was on a camping trip on the Lewis River in this State, a young man knocked at my cabin door and wanted a night's lodging as the weather was very bad without. Of course I took him in and gave him a hot supper, after which he commenced yarn telling. One of his collection of fish stories I considered A1, coming as it did from an ignorant country lad. He told me that he had been on the Washougal River with an old logger, who had a salmon berry swamp on his place, which extended along the river and at that season was full of berries. For some reason it was necessary for him to cross the patch one evening, and said he: "All on a sudden I hear the greatest racket in the bushes so I took a few steps side'ards, and so help me over the fence, if thar wasn't a thousand er mebbe more, salmon, what had been out a-pickin' berries, jest a skeddaddlin' fur the water."

TOM PEPPERS.

VANCOUVER BARRACKS, WASH.

## Game Bag and Gun.

### SHARPTAILS ON THE BIG HORN RIVER.

ONE day a friend of mine and myself, started up the Big Horn River (Montana), hunting sharptail grouse. As it had rained heavily the night before, we thought our chances good for a big bag, because on a wet morning the scent clings to the grass and greatly helps your dog to find the birds.

Having crossed the pontoon, we were riding along a dry slough when *whirr, whirr, whirr*, the grouse were getting up on all sides. I had not been watching the dog, and when I looked around to see what he had been doing, I found that he was on a dead point, so we dismounted, and I motioned the dog to flush the remaining birds. Two got up singly and I knocked them both down with a right and left double. My companion was kept from shooting by having a shell stick in his gun. We then followed up the covey and found them in a sage-brush flat. I dismounted, flushed the birds and gave them both barrels, but scored a clean miss. We got no more of that covey.

A half a mile up the river we came to a dry slough with here and there a water hole. Around one of these holes we found a large covey of grouse, that had come down from the brush to drink. As they did not see us, we went back to a tree and tied our horses, so as to be free in action. The dog was sent ahead, and he at once pointed to a piece of brush and at that moment a grouse rose from it, but I stopped him in his flight. The big covey rose all at once, Mr. L. got one, but my remaining cartridge missed fire.

Being near the river we went over to it. Just as we came in sight of the opposite bank, I saw a large bunch of teal ducks swimming and playing off a point that projected into the river. Motioning my companion to go back, we tied up our horses and proceeded to sneak up on the ducks on foot or rather on our stomachs. When we reached a bullberry bush which grew on the bank, we both fired, Mr. L. fired one and I fired two. By the time the smoke cleared away we saw that seven ducks had stayed with us, but we were only able to get five, because the swift current swept the other two down into deep water.

We were beginning to get worked up to the proper pitch by this time, and worked with a will. About a mile further on the dog flushed a covey of grouse out of which I got one.

The next birds that I killed were two sage hens. The first one got up on my left and I killed it. The second rose on my right and a load of chilled No. 6's brought it down. In the mean time Mr. L. was looking after a third bird, which he killed at 95 yds. (paced off). The birds were becoming very plenty. While I was looking in another direction, I was startled by hearing Mr. L.'s gun go off beside me, and looking around saw a fine grouse lying dead on the ground. The bird had been watching us as we rode under the tree upon which it was perched, but did not seem to realize its danger until it was too late.

We were commencing to get hungry after our hard work, and agreed to go down to the river to eat lunch. We had not gone 300 yds. when the largest covey that I ever saw rose. I shot two on the wing from my horse, and dismounting shot one more. That fell in the brush and neither the dog nor myself could find it. When the birds rose I kept my eye on a couple and marked them down, at once went over to where they pitched and killed both. There I saw something moving along in a depression in the ground. It proved to be a grouse, but when it rose I missed it with both barrels. Seeing that it was useless to proceed further on foot, I joined Mr. L. and we rode to the river. Our lunch tasted very good after such hard work, I can assure you.

Then we started up the river. Under a large cottonwood we spied a sagecock, which Mr. L. dispatched without further ceremony. I think that it was the father of

all sage hens, for it was the largest that I ever saw, being as large as a hen turkey.

We kept on up the river until we came to a dense growth of willows, and just on the opposite bank we saw a large flock of shoveler ducks. After tying our horses we crawled up to a place agreed upon, and let the ducks have three loads of No. 6. The result was that we had three ducks.

It being 4 P. M. we turned homeward. On our way Mr. L. killed and my gun brought two more birds to the bag. Our grand total of game was 27 birds and 3 catfish.

Thus ended my last hunt on the Big Horn. H. M. B.

### ON IOWA MARSHES.

In the early part of November, 1893, as is my usual custom, I set out for the Northern marshes in quest of ducks. Shells were loaded, hip boots, guns, coats, dogs, and all the necessary articles were gathered together, and with two companions I took the train for Jolley, in the southern part of Pocahontas county, Ia. We found a small hotel, poorly kept, but roughing it always seemed to me to be just what we wanted on a trip like this. We had no difficulty in finding some one who was willing to get up at 4 o'clock the next morning and take us out to the marshes, some two miles distant.

I was always the first one to wake in the morning, and as usual I was awake long before there was any sign of day.

Breakfast over, our wagon was waiting at the door. After driving a few miles in the frosty air, we drew up to a small barn and put up our team, and then proceeded to the long grass and high weeds. Day was breaking and there were signs of ducks, we were getting cold, and there was a stack of hay there and we built a fire out of the slough grass that was placed upon the hay for a cover. Off to the northwest, we could see a good many ducks lighting without very much ceremony, and we concluded to change our location and go over there. We found a very large marsh or what had been a lake in times gone by. The marsh covered thousands of acres, and in the center was a large grove of trees called Pond Grove. We secured boats and tried to get out in the reeds and rushes, but on account of the scarcity of water had a very hard time of it. There was six to eight inches of water on top of a very thin substance of rotted rushes, and other decomposed matter, which had fallen there from year to year and filled up until it was several feet deep, and a most treacherous foundation, should one from any cause upset his boat, or in any other way get into it.

After paddling for some time I got a location, and covered my boat and awaited developments. Soon after I had become still I heard the report of the guns of my companions, and I knew full well what it meant. After waiting some time, along came four mallards, and the result was that two of them were gathered up and laid tenderly in the boat. I again covered myself with dead grass and was quiet. It seemed that the other boys had the best location, judging from the number of times they were shooting. Every now and then I could hear the boom of their guns, and a duck would double up all in a heap and go down under the skillful marksmanship of my companions. To me there was only one prettier sight, and that was when I did the same thing. Here come three mallards. Lie low. They are going to drop in close. I wait in breathless silence. On they come, their wings begin to curve and they are close enough to shoot; but I know they are going to drop in, and why not let them do so, and perhaps I can get all three of them? They strike the water with that ever pleasant splash, but separate, and one is within twenty feet of me, another fifty or sixty yards, and the other one is too far to try to get. I shoot at the one farthest away, as it sits on the water, but it is too far to stop it, or I could not hit it. The other rises as the report of the gun sounds, only to fall a very dead duck.

All quiet again except the continuous report of my companions' guns, and soon along comes a flock of small ducks, at quite a distance. I shoot, and only one falls. I wait, and wait, and after a long time a flock of about 20 or more comes along low down, and I wait again. Their wings are dipped, and down they go within 30 yds. of me. Now is the time for me to make my bag, as it is getting dusk, and I am behind the other boys in numbers, I know; so I just rake them with my No. 5 shot as they sit, and then again as they rise; reload and finish two with broken wings, and then prepare to pick up my result. Five is all I got. This makes me eight mallards and one small duck. Bringing my ducks to the wagon, I look for my companions, and they are still down by the shore of the marsh, trying to get a few shots at the stragglers that are flying after night. I go down there. "How many ducks?" "There they are in a pile by the boat." I go and count them; and the two have 21 mallards. I have 8. Twenty-nine mallards and one small one are all the ducks we want. We are satisfied. An after-night ride, and we are again at the hotel, tired and very hungry. In the morning we took the train for home, and felt that we had had a very good day's shoot. I hope that I will be pardoned by the boys for shooting into the flock sitting on the water. W. S. DAY,

IOWA, 1894.

### The "Dagoes" in Louisiana.

BURNSIDE, La., May 29.—*Editor Forest and Stream:* You have got the right idea about stopping the sale of game. It is the only thing that will save our game. But we would never get any game laws enforced in this section of the country. You could never get evidence enough to convict a man. So our present laws do not amount to a row of pins. The "Dagoes" kill a lot of quail at this season of the year. All of the "Dagoes" have guns; there is no law to prohibit them from carrying their guns about with them, and many a poor quail is murdered while dusting in the sandy roads, by these miserable "Dagoes." The quail are quite tame, you know, at this season of the year. As I write these lines I hear a quail whistling; I have heard him for about two weeks now, but I fear some pot-hunting "Dago" will kill him, before the summer has passed.

It is the same way with deer. They are killed out of season. I heard of two men killing twenty squirrels the other day. Think of killing any sort of animal at this season, when all have young ones. I try to keep my men from hunting even wild cats at this season, and they are considered more or less of a pest, for they kill geese and poultry. W. P. M., JR.

## CHICAGO AND THE WEST.

[From a Staff Correspondent.]

## Horicon Wins.

CHICAGO, Ill., June 1.—A private letter to Mr. Percy Stone, from the attorney of the Horicon clubs, has the following good news:

"BEAVER DAM, Wis., May 28.—Percy F. Stone, Esq., Chicago, Ill.—Dear Sir: The Supreme Court last Friday reversed the case of the State of Wisconsin vs. Klieforth and Cummings, and the case of the State vs. you by agreement of the court and District Attorney will follow the same decision. I suppose that this decision disposes of the cases; I have not yet seen the opinion of the court, but suppose it holds that the rule of daylight given by Judge Sloan has been declared not the law. When I get the opinion will send a copy to you. Yours, J. J. DICK."

It will be remembered that the County Judge, Sloan, and the Waupun local jury of trespass sympathizers found against the club men. The reversal of this decision by the Supreme Court shows that justice is not dead in Wisconsin. Deputy Klieforth, of the club's protective force, has the following inserted in the local paper:

To the Editor of the Mayville News:

Some time ago your paper and nearly all the other county papers contained an article reflecting upon myself, Percy Stone and William Cummings in reference to our acts as protectors of game, and particularly in reference to the Horicon Shooting Club, in which you said that we had been convicted of assault and battery for the illegal taking away of Fred Lamb's gun while he was shooting on the Horicon Marsh. The case was appealed to the Supreme Court and on May 25 their decision therein was rendered by which the judgment against us was reversed. This decision practically disposed of the pretended claims of all parties who claimed to have the right to shoot on the grounds of the club, and especially as to their right to shoot game anywhere before sunrise. The Horicon Shooting Club intends to prosecute all parties who have heretofore or shall hereafter violate the game laws of the State, or who shall be found trespassing on the club grounds. WM. KLEIFORTH, Deputy Warden.

## Will Have a Hanging Bee.

Mr. E. M. Hungerford, of Billings, Montana, shows what I call true hospitality in his invitation below. I have not been at a hanging bee for a good while, and this sort of tempts me. Mr. Hungerford says: "Everything is quiet here with us as when you was here. Weather is good for the breeding of both geese and ducks. Come out this way this fall and we'll give you the greatest variety of sport you ever found in one locality. We'll even promise a special hanging bee (not with yourself as the subject) or another Coxey riot for your edification. Of course these would be simply side issues and would in no way interfere with the legitimate sport—ducks, grouse, wolf-chases, etc., *ad lib*. Our mutual friend, Mr. Losekamp, is still on deck and would send his respects did he know I was writing."

## Got! Another Invitation.

Dr. W. D. Taylor, of Brownsville, Tenn., who is in the city on a short business visit, hunted up the FOREST AND STREAM Western office, as I am very glad to say, and though I had never been so fortunate as to meet him before, he very nearly got my solemn promise to come to Brownsville next summer and shoot quail with him. If I didn't have to work once in a while I could have a lot of fun. Dr. Taylor says the birds are doing well in Tennessee. But now, have I ever exaggerated the quality of the Southern men's hospitality? This gentleman, who had never met me at all, came all the way and looked me up, just because he thought, from what he had read in the "Dixie Land" articles, I had enjoyed the quail shooting of the South. What Northern city man ever looks anybody up and tries to do him a kindness? We don't know how to live here.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

## FLORIDA TWENTY YEARS AGO.

OMAHA, Nebraska.—FOREST AND STREAM is a paper that from long reading has become one of the great pleasures of the week, and when a Sunday passes without it I feel lost. Ever since 1876, when as a boy I hunted and fished in Florida, with little thought of game laws I fear, I have read it. In that year a thoughtful friend in the North sent it to me, and from that day to this I have only missed it when so situated that I could not find a copy on sale. How eagerly its arrival was looked forward to in those early days; we received our mail only once a week, for we lived ten miles from the nearest post-office.

Every one hunted in our neighborhood, and I think throughout the State, and I suspect that many of our present day readers would not hesitate to class us as pot-hunters, and we were. It was hunt or eat salt meat, and any one who has tried dry salt meat as a steady diet will not blame us. A deer meant a change and we were not slow to avail ourselves of every chance we had to get one. How well I remember the time-worn exclamation that arose from every one, "Meat in the pot," every time the report of a gun was heard, or the look of disgust on the face of fat old mam Cicely when she poked her head out of the kitchen door and saw us boys return empty handed.

We used muzzleloaders in those days and I still prize my old gun, a 14-gauge Manton that had seen hard service long before it reached my youthful hands. But how it did shoot, and many are the deer and wild turkeys it brought to our table. In the winter season we had fun with the wild ducks and had to work hard to retrieve them. The lakes and ponds swarmed with alligators and the native dogs could not be induced to venture in, nor indeed would they retrieve on dry land for that matter; bird dogs were almost unknown with us, though every plantation boasted its pack of hounds, and pointers and setters were deemed a curiosity and little esteemed. The only one I ever had as a boy met with an untimely end—too much alligator. He would go in swimming and that always was unhealthy for dogs in our country.

In those days Florida was a paradise for hunters. Deer, turkeys and quail were to be met with at every turn, ducks covered the lakes and bayous all winter long, and bears, panthers, wildcats and wolves haunted the hammock lands and sandhills; and so it might have remained until to-day had not the sportsmen found it out. We natives were no doubt pot-hunters of the first water, but we used what we killed and only killed what we could use. The fame of our game went abroad, and soon the State was overrun with so-called "gentlemen sportsmen," who shot only for pleasure and left what they killed to rot where it fell. It makes me sore to this day when I

think of the butchery that was perpetrated in the name of sport.

Sportsmen! Nothing of the kind. Murderers of the worst kind, who should have been landed in jail. I well remember one fellow, an Englishman, who came all trigged out in the latest fashion, and with a valet. He hunted in our neighborhood for a week or more—until we stopped him. We found four dead deer lying in the woods where he had left them, and then my brother and I took the law into our own hands, mounted our horses, called together all the dogs on the place—some twenty or more—and ran Mr. Sportsman with the hounds. I don't know how badly he was scared, but this I do know, there were no more dead deer found.

W. R. H.

## PENNSYLVANIA LAW.

PENNSYLVANIA STATE SPORTSMAN'S ASSOCIATION.—ALTOONA, Pa., June 3.—*Editor Forest and Stream*: The sale of game, the question of a State game warden, the transportation of game out of the State, and the problem of a uniform game law for Pennsylvania that will as far as possible meet the wishes of all sections of this vast commonwealth, are some of the nuts that the Pennsylvania State Sportsman's Association is now trying to crack. It asks through your columns that the sportsmen of the State will help it in this matter by offering suggestions in regard to the above points. The Association has reprinted the bill reported favorably to the last House of Representatives at Harrisburg, and has sent copies of the same to all the organizations which are members of the State Association, with a request that suggestions be offered for the consideration of the legislative committee of the Association. By means of these suggestions it is hoped that a bill can be framed which will represent the views of the majority.

As the law now stands it is permissible for a man to go into the woods with his gun and dog any time after July 4. He is going for woodcock, of course! As a matter of fact, we don't hunt woodcock at all after the first three or four weeks of the open season, the birds get scattered and are hard to find. During those three or four weeks the birds are in their prime and I know of no better sport than a morning's hunt during July. In the fall we get no flight shooting to speak of; as a rule we get none at all, the birds passing by us altogether. The birds that have bred here slip off on the first sign of frost and don't return until March, when they commence housekeeping at once. What we want here is a month of summer woodcock shooting as recommended in the bill referred to above, which provides that woodcock shall be lawfully killed between July 4 and Aug. 4. The date set in the bill for the resumption of the open season, Oct. 15, is altogether too late for this section and, I take it, for the main portion of Pennsylvania.

From letters I have received on the subject it seems as if it was the general wish not to shorten the seasons, but by the aid of a law that will prohibit the sale of game and the transportation of the same out of the State, as well as the appointment of a State game warden to enforce the law that may be found best suited to the State.

If any clubs or individuals desire copies of the bills mentioned above, I will send them the same promptly. At the same time, any suggestions intended for the legislative committee of the State Association can be sent to me and will be laid before that committee at its next session.

EDWARD BANKS, Sec'y.

## Game Notes from the Roseau Country.

PELAN, Minn., May 25.—*Editor Forest and Stream*: I have just returned from a long hunting trip in the Muskeg country, south and east of here, principally in search of bear, but failed to find any number of them. I made a circuit of about 200 miles, covering a region in which I have always heretofore found plenty of bear, but they are scarce this spring. We got but one, and that a young one. I killed a yearling bull moose for camp meat, and saw a large cow, heavy in calf, but did not kill her. I think she was the tallest moose I ever saw. I was out two weeks and was out of grub for three days, except some fat bear meat, which I did not relish as a steady diet. The half-breed whom I took with me deserted me in the midst of the Muskegs, and left me with my team to get out as best I could. Of course I knew the country thoroughly, and came out all right, but it made rather heavy work for me, handling the team and the baggage alone, and doing all my own cooking and camp work.

I am arranging for a trip into Manitoba, leaving here about June 1, to catch moose calves. The Ellerton brothers are going with me. We shall take a team, two milch cows, and a full supply of provisions. Shall be gone two to four weeks and hope to bring home several moose and caribou calves. Will report results later.

BURTON HARRIS.

## Going North.

ROBERT D. PERRY, of Braintree, Mass., and Dr. Wm. E. Reeve, of Patchogue, L. I., are the first FOREST AND STREAM readers to take advantage of the opportunity afforded sportsmen by Dr. Cook's Arctic Expedition, to secure Arctic game. Dr. Reeve has just returned from Virginia, where he has spent several months hunting for deer, and expects to hunt Polar bears and walrus for the summer. Mr. Perry was one of Dr. Cook's companions in the schooner yacht Zetta last summer, cruising along the Greenland shores. He is thoroughly fascinated with the bleak Arctic shores, the glaciers, the icebergs, the strange forms of life, and longs again to return to the "Wild Arctic Wastes." The time is not long distant when men will go to the North Pole in search of game.

## A Sample of Tennessee Shooting.

CLARKSVILLE, Tenn., May 26.—Thank you for your kind invitation on front page of this week's paper: "Report your luck with rod and gun." Large bags of game here are a rarity, but I will give you the total of four days' shooting during Jack snipe season. I would leave home at 8 o'clock A. M., returning at 12:30 P. M., never going over three miles, so only actually hunting three hours each. In that time I bagged forty-one jack snipe, nine gray snipe, ten plover, three ducks, seven rail (small), two king rail, one squirrel, one hawk and one coon. I had unusual luck one day in getting into a lot of English snipe. The Clarksville Gun Club has not had a meeting this year yet and if they do you may hear again from me.

SLIPPERY.

## Quail Packing.

NEW YORK, June 1.—Having seen Mr. H. L. Burdick's article in last week's FOREST AND STREAM, entitled "Quail do Pack," and there seeming to be some question whether they do or not; let me say, with Mr. Burdick, that quail do pack, especially in the Southwest, New Mexico and Texas. A year ago I lived on a ranch in Mora county, New Mexico, where the blue quail were very thick. At no time do I remember having seen single birds, always from ten to forty in a bunch. When shot at, they would naturally scatter, but in a little while would be in one bunch again. Not being hunted much, they were quite tame and nearly every ranch had a semi-domesticated bunch, that lived near the buildings almost like chickens. Not having had much experience with Eastern quail, I can say very little about them; but hope to hear from some Eastern fellow-sportsmen if the quail bunch or not in the Eastern States.

C. W.

## Currituck Quail Shooting.

THE president of the Narrows Island Club has made arrangements with a number of farmers of Currituck county, whose lands adjoin the club's property, by which the quail shooting on their farms shall be reserved for members of the club. It is intended to supply these farmers with buckwheat which they may sow in their fields after they have gathered their crops, so as to afford abundant food for the birds, which are already numerous. The recently passed law forbidding the shooting of wild-fowl for two days in the week tends to induce sportsmen visiting Currituck county to pay more attention to upland shooting than has heretofore been the case. The grounds of the Narrows Island Club includes a considerable area of admirable quail country as well as extensive snipe marshes, on which, first and last, a great many birds are killed.

## Baltimore County Game.

BALTIMORE, Md., June 1.—Our new game law (applying to Baltimore county only) protects partridge, rabbit, pheasant, gray squirrel and woodcock until the game seasons of 1895. This law is radical. A close season of nearly eighteen months for quail, but, sad to say, woodcock, a migratory bird, is also in the list. As for squirrels and rabbits, I have no use for them except in the tree or on the lawn. In the pot the rabbit looks too much like the family cat, and like her they too are protected. There is also a new clause, and this will interest our friends, for while non-residents must pay a license of \$10 per annum for the privilege, yet if they get our consent they can shoot over our lands for nothing.

ASA B. GARDNER, JR.

## She Has a True Aim.

MANY of the ladies of Jackson's Hole, Wyo., are known to be good shots and to have killed various sorts of small game, but last winter Mrs. R. L. McDermott broke the record by going out alone and unaided and killing a big, fat cow elk, and she made a shot that any hunter could be proud of, as the ball went directly through the heart of the animal. The gun, a .45-90 Winchester, she had never fired before, as her favorite gun had always been a .22cal. Colt's repeater. One would never select Mrs. McDermott as the woman with the nerve to tackle a bunch of elk, as she is a handsome and refined little blonde lady with an entire absence of any suspicion of masculinity in her make-up.—*Correspondence Cheyenne (Wyo.) Leader*.

## Game in Iowa.

ROCKWELL, Iowa, May 31.—We are having an ideal spring for game; prairie chickens are thick, although they could not be found last fall. I have seen more quail this spring than ever before in this vicinity.

W. L. H.

Dr. Cook's Arctic Expedition. A few sportsmen can join it. To "Greenland's icy mountains." To within 800 miles of the North Pole. Hunting polar bear, seal, walrus and reindeer.—*Adv.*

## Sea and River Fishing.

## TARPON AND TURTLES.

OSPREY, Manatee County, Fla.—Last year we had excellent sport with our tarpon in the bays near my winter home on Little Sarasota, all through April. This year, however, that incorrigible coquette, the *Megalops*, has given us poor sport. In fact, from all that can be heard there is good evidence that very few tarpon have been in the bays up to the present date, and the few that have been inside have given us very mediocre sport. The "Grand Ecailles," as some of the semi-French natives call them, have been, in this region, at least, "off their wittles," and when they seize the mullet they nibble rather than bite, and walk off with it in place of running off the coil as we like to see it unwind.

About the mouth of the passes in the open Gulf plenty of our frisky friends may be seen, not singly, but in assemblages numbering from a half-dozen up to a half-hundred. But in the case of these gatherings, as in the case of the Coxey contingents, their ways are dark. They bask lazily along the surface of the warm water and swim about in a dreamy way. Now they are in a body and later on they assemble in a sort of a circle and swim around slowly as if playing circus.

While indulging in these antics they pay no attention to any bait which may be tossed even within a few inches of their broad mouths. Some days ago while fishing for black groupers over the rocks which form the northern boundary of Little Sarasota Pass I noticed such a gathering of tarpon. Pulling in my anchor, a few strokes of an oar soon brought my light boat to the group. The grand fish paid no attention to the approach of their enemy—man—so I was enabled to follow them about leisurely for over a half hour and study their movements at pleasure. During this entire period they never left the surface, but were in sight all the time. At short intervals they exposed their heads and grand eyes, then the dorsal fin and the feather next the tail were exposed. They also rolled over at times, showing the silvery gleam of their large scales. There movements were slow and lazy beyond expression.

The boat was paddled up so near to them that it would

have been an easy matter to bury my grains into the back of one of the beauties—but to what profit? Those who have brought the tarpon to gaff know well enough what he can do when he gets down to business. So I allowed them to roll and circle at pleasure, and looked with renewed wonder at their burnished sides and gem-like, translucent backs and admired again and again their great eyes. A fine morsel of cut mullet was cast into the midst of the school time and again without any result other than to cause a slight lunge when the bait came too near the eye of one of the beauties.

I tried to count the "heads," but found it quite as difficult to count noses among moving tarpon as among young chickens. My count was as low as forty-two on one occasion and as high as forty-eight another time.

This is "full season" for turning turtles, as the first of these salt water hens generally come out on the beach with the May moon. Turtle beef is not only rather tough but has a strong flavor if the fat is not very carefully eliminated from the lean. But the meat makes a superb broth which may be "canned" and left for future reference and which may form the basis of soups good enough to satisfy the demands of even a rigid gourmet. These loggerheads leave their native element at night and climb the sandy beach, and after digging a suitable hole with one of their front flippers they deposit from 75 to 150 eggs. These eggs are excellent and more digestible than hen eggs and are consequently sought for eagerly by man and beast. As a natural result of this war against the unhatched innocents the days of the sea turtle are numbered. We all like turtle egg turnovers and gems for breakfast, but those of us who are more human than the coons and possums generally leave at least a score of eggs "for luck" in each nest which we discover.

The natives come down to the Gulf from their inland homes these moonlight nights, and often camp on the "key" near the shore, remaining for several days. When they catch an old hen loggerhead on the beach they "turn" her; in this condition the turtle is entirely helpless and may be left until morning, when she is butchered and the cracker can return to his home with a fine stock of meat and plenty of eggs. I had the good fortune to turn two turtles last week and got 148 eggs from the nest of the larger of the two. The other hen started back to the Gulf without making any nest and it took a brisk run to head her off, but we "got there" all the same, and when we killed her the next day we got eighty more eggs to add to our stock.

May in Florida is about as warm as July on the Jersey coast and the thermometer sometimes marks 90° Fah. in the shade, but we have our breezes from the water to temper the heat, and, after all, go North more for a change of scene than for a change of climate. NONE SUCH.

## WE WENT FISHING.

SUTTON, Que.—I have had it in mind for a long time to write you about a little fishing excursion that a party of five of us had the pleasure of participating in in the spring of '93. We had been planning and talking it over all the winter and early part of the spring, and at last fixed upon a day to try our prowess. At that time trout do not take a fly very much in the mountain streams, and to be perfectly frank none of our party were past masters in the art of fly-casting, although later on we had fairly good luck fly-fishing in the more open streams.

Just as the sun was showing his round and smiling face above the brow of Old Sutton Mountain, we drove into the pretty little village of Knowlton, a favorite summer resort on the picturesque shore of Brome Lake, a sheet of water noted for its bass and pickerel fishing. We bore off to the right and drove up into the mountains of Bolton, to a little pond known in the vicinity as Coon's Pond, a fine trout haunt, and owned by the Hon. J. B. Baker, who very kindly allows it to be fished by the public. As we rounded a turn in the road its whole surface lay before us, smooth as glass, except for here and there a ripple caused by the morning breeze, and from which the presiding genius of the place, one Mr. Coons, for whom the pond was named, was taking some very fair-sized brook trout with a brown-hackle and alder pole, and as he sat in his boat whipping the ripples on either side of him, his white hair and bent figure sharply outlined against the dark foliage that surrounds the water, he appeared the perfect type of an ancient fisherman. We resolved to have the solitary boat he was fishing from if our persuasion would induce him to abandon it in our favor. He could not withstand our efforts, the boat was procured, our rods put together, and Parsons and Horas started out to locate and of course capture the very father of all the finny tribes, while the rest of us were content to try our luck and skill from logs and headlands around the shore.

But luck was against us; the wind went down, the water became smooth and transparent, and the fish would not bite. So we hitched our team and drove back down the mountain and got some very fair fishing in one of the outlets of the pond which we fished to the old Magog road, where we put up our horses and ate our lunch under the shade trees of an adjoining farm house. Our luggage packed, we took the old stage road through the Bolton Pass, one of the finest drives Brome county is so justly celebrated for, and our next stop was made at Salley's or Grass Pond, at a little stream flowing from this pond along the base of Bald Mountain, down through a very wilderness of alders.

I was fishing a pool two or three rods down the stream in the edge of the thicket, when I heard my companion—a man of mild and unassuming manners—using loud and angry words in a pool just behind me, and thinking he had come in contact with an angry land owner, I went back to see what the difficulty was, and found him fairly wild over the peculiar antics of an *Sin* trout, which, owing to the brush, could not be hooked secure enough to land, but would dangle a second just out of the water and then drop back, not hurt enough to prevent him from biting again. We had a good catch on this part of the stream and soon struck the road again, where one of the boys had left the team, and, it being now after sunset, we drove to the Bolton Springs House and put up for the night, where we had some of our fish for supper.

After breakfast we found a sportsman who was staying in the vicinity waiting to see us. He reported having fished the Missisquoi River, and had caught a number of trout weighing from 1 to 2½ lbs. We decided to try it; but we failed to get anything like a satisfactory result. We worked our way gradually toward home, fishing a couple of other brooks on our journey, and arrived home

highly pleased with our outing, ready to pick up with renewed vigor the thread of business, feeling we had spent two days upon the mountain streams of Brome that would never be forgotten, but would be lived over and over again in fancy and with scarcely less pleasure. We had taken something like 40 lbs. of brook trout, none of which were over 1½ lb. in weight, but the very finest of all fish for table use.

Since then our party has been broken up, two of the boys are in Colorado, and have during the past season caught salmon from the Fraser River in British Columbia and trout from the mountain streams of Colorado; but they have assured me more than once that never have they had two more pleasant days than the ones I have taken the liberty of describing to my fellow anglers of FOREST AND STREAM.

WEST.

## ANGLING NOTES.

Frank Buckland.

A CORRESPONDENT desires to know if the book upon angling, "by Frank Buckland, of the London *Field*," is a standard work to-day; when Mr. Buckland died, and if he was a recognized authority upon angling.

I think the correspondent has confused the identity and work of two different persons. Francis Trevelyan Buckland was born Dec. 17, 1826, and died Dec. 19, 1880. He was one of the founders of *Land and Water*, and its fishing and natural history editor up to the time of his death. He was inspector of salmon fisheries for England and Wales, but, so far as I know, never wrote a book upon angling.

Mr. Buckland was a prolific writer upon the fisheries, fishculture and natural history, and was the author of several books, but never ranked as a recognized angling authority.

Mr. Francis Francis was the angling editor of the London *Field*, and he did write "A Book on Angling," for that is its title, which has passed through six or seven editions, and is a standard English work to-day, and probably will be for many days to come, except in that branch of the art known as dry fly fishing, which may said to have been developed by Mr. Frederic M. Halford since Mr. Francis' death. Mr. Francis Francis was one of the great anglers of Great Britain, and consequently a recognized authority upon matters pertaining to angling, and the author of several books on the subject other than the one here given by title.

## Fishing in Bay of Quinte.

When I learned that the Canadian authorities proposed to prevent American fishermen from fishing in Bay of Quinte, in Canada, I was at a loss for words to express my regret at this action, for in Bay of Quinte I have had some of the best black bass fishing of all my experience in many waters, and in Hay Bay, a part of Bay of Quinte, is to be found some of the best mascolange fishing, all of which I fully described in FOREST AND STREAM some years ago.

Mr. E. T. D. Chambers sends me word, however, that the case is not as bad as at first reported. It seems that the Department of Marine and Fisheries, at Ottawa, has under consideration a plan that will prevent American citizens from fishing in Bay of Quinte and Hay Bay on a commercial basis, while still permitting legitimate summer visitors and anglers to fish with rod and line as a source of sport. So far from being disappointed at this action, American anglers may wish that the Department of Marine and Fisheries might extend their jurisdiction over the border and regulate the fishing in some American waters on the same basis.

## Mohican Rod and Gun Club.

At the May meeting of the Mohican Rod and Gun Club, of Glens Falls, N. Y., action was taken to incorporate the organization, and then it was resolved to offer a series of rewards for evidences leading to the conviction of violators of the fish laws. The governing board of the club has fixed upon a reward of \$25 for evidence of violations of Sec. 102, which prohibits the use of unlawful devices in taking fish, \$25 for evidence of the violation of Sec. 106, which provides that trout under 6 in. in length shall not be taken or possessed, and \$25 for evidence of violations of Sec. 114, which prohibits the taking of salmon under 18 in. in length.

The laws are just and reasonable, as well as necessary for the preservation of the fish mentioned in the sections, and the club will put forth its best efforts to enforce them. Many brook trout spawn before they are 6 in. long, and ripe eggs have been taken from trout that were only 4 in. long, and if all trout are allowed to spawn once before they are subject to legal capture the brooks will not become utterly depopulated. I am morally certain that a great many trout under 6 in. are caught and secretly sold to hotel keepers, but the moral certainty must be made a legal certainty.

It is equally certain that the trout streams are netted for the same purpose. On the first day of the open season this year a hotel exhibited 6 lbs. of brook trout taken from a near-by stream, and on that day two good anglers were unable to catch more than a single trout in the same stream, using hook and line. They both told me that they saw a number of trout and they were as wild as hawks. Those who profess to believe that minnow nets may be used in trout streams to take bait fish will be taught the contrary, for the law is plain on this subject.

The region in which the club operates contains the streams used as nurseries for young salmon planted to stock the Hudson River. Quite naturally the streams selected for this purpose are trout streams, and so far as I had the selection, other things being equal, I selected streams that were posted, but even posted streams are fished and the salmon parr are ravenous little beggars and will take fly or worm baited hook with all the dash of their elders. The baby salmon will not grow to 18 in. in length in the trout brooks before they go to sea, therefore it is illegal to catch them at any time in the trout streams where they have been planted, and they must be protected until they go to sea. Furthermore, with the building of fishways in the Hudson the adult salmon will return to spawn in waters where the club operates and the spawning fish will become its especial charge.

The different laws will be made plain to all who can read by posters and notices in local newspapers, and the difference between salmon parr or smolts and brook trout will be made equally plain, and the posters will be displayed along the streams, at schoolhouses and other meeting places, after which the law will be enforced if evidence

can be obtained that it is violated. If it is plain that the law is violated and a reward of \$25 is not sufficient to check it, the club will give \$100. Good citizens will respect the laws; others must be made to do so, and whatever the cost, the club proposes to do all that a lot of earnest men can do to make the trout streams a safe nursery for young salmon and the headwaters of the Hudson a haven for the adult salmon, once they arrive, where they may spawn unmolested.

## With a Hatchery Superintendent.

For a number of years the Lake George Association, Gen. Robert Lenox Banks president, has planted in the lake annually 500,000 lake trout fry procured from the State, and now the lake is a shining example of what may be accomplished by restocking with artificially reared fish. This year the trout fry came from the Adirondack hatchery near Upper Saranac Lake, although the eggs were taken in Lake Michigan, and when the last shipment came Superintendent John G. Roberts came with them, and telegraphed me to meet him, which I did, and went to the lake with him.

The trout fry, about 135,000 in 28 cans, were a very fine lot of strong, healthy fish, with scarcely any dead ones after a journey of ten hours, and the question arose in my mind: Are lake trout fry better for being hatched in the colder water of the Adirondack hatchery, where they are hatched in 120 days and conform to the time required in the waters of our Northern lakes, than they are when hatched in the warmer spring water of another hatchery where they require but eighty days to hatch? Certainly I have not seen a more thrifty lot of trout, with fewer cripples, than these trout which were 120 days in hatching.

On another occasion I had something to say about the condition of trout fry received at Lake George, and a hatchery employee criticised my article and said that he had handled a great many fry and "had yet to find any dead fry in any cans that were not put in the cans in that condition." This is so absurd that it scarcely required comment. My first practical lessons in trout hatching were taken in a hatchery over twenty-two years ago, and from that time to this there has been no way discovered of making strong fry out of those born weaklings, and with the best of care some few fry will die in the cans, as doubtless they would have died had they remained in the troughs. I have often had men look into cans of fry and say there were no dead ones, while I knew there were plenty of them.

After the fry were delivered at Lake George I had an opportunity to sit down and talk with Mr. Roberts. He told me that he planted 5,000 landlocked salmon fry in Lake Brandon (Little Clear Pond, as it was once known), on the hatchery reservation, a pond of 325 acres, and in 1890 and '91 planted 5,000 more fry—2,500 each year. Now the pond is well stocked with salmon, so that in drawing a net for spawning trout he would get a dozen salmon in each haul, fish weighing from 2½ to 4 lbs. each. This was of interest in view of the fact that Lake George is to be stocked with landlocked salmon where the food is largely frost fish, and the salmon food in Lake Brandon is also frost fish—round whitefish. It has been held that to stock any water with salmon successfully, smelt must be provided for them to feed upon, but I am banking on the belief that round whitefish will prove to be as good as smelt, and it is pleasant to have this view of it confirmed in so practical a manner.

Fishculture furnishes some startling surprises and Mr. Roberts provides an example. About twelve or fifteen years ago Mirror Lake in the Adirondacks was stocked with small-mouthed black bass; it contained brook trout but not lake trout, and eight or nine years ago lake trout were planted. Now the lake trout have eaten the black bass until the bass fishing is nearly destroyed. The trout are frequently taken with the bass inside of them. In Schreon Lake a lake trout was caught that had in its stomach a pike (the fish generally called pickerel in New York) of 2½ lbs.

A year or two ago I noted the capture of lake trout in Upper Saranac Lake that contained pike, and yet at that very time there was a movement on foot to introduce black bass in some of the Adirondack lakes into which pike had found their way, that the bass might destroy the pike instead of the lake trout. I opposed this and had the assistance of FOREST AND STREAM in so doing, urging that it would be far better to net out the pike than to put in the black bass. Mr. Fuller of Meacham Lake is doing this successfully to-day, and the law still stands making it illegal, with a penalty of \$500, to plant other than species of the salmon family in Adirondack waters.

Mr. Roberts told me of a brook trout caught this spring in Horseshoe Pond near Saranac Lake by a Mr. Hunter, that weighed 5½ lbs. and measured 2½ in. in length. Wesley Wood, a well known Saranac guide, was with Mr. Hunter, who, I believe, lives in New York city.

I think it is not generally known that an effort is being made to restock Lake Champlain with lake trout. I say restock it, for I have the evidence of a trustworthy living witness that Lake Champlain once contained an abundance of lake trout, though why they should have disappeared so entirely I cannot learn. I know there are plenty of people who say that the lake never had the lake trout, but I am satisfied that they are in error. Mr. Roberts planted 250,000 lake trout fry in Champlain in 1891, and 500,000 in 1892.

In speaking of the habits of different fish that he had handled, Mr. Roberts tells me that the only fish of his raising that he cannot carry in an open vessel, are landlocked salmon. Fingering trout of all kinds he can carry in a bucket without a cover, but under like conditions the little landlocked salmon will jump out to the last one.

## A Youthful Champion.

The boys are having their innings in these days in catching large fish. The latest candidate for champion honors is Raymond Gleason, 12 years old, who caught a trout of 1 lb. 11 oz. in Glendon Brook, near Glens Falls, a stream in which the salmon fry for stocking the Hudson River have been planted since 1884. Young Gleason broke rod, line and hook, but saved the fish, to the astonishment of his father when he viewed his wrecked tackle.

A. N. CHENEY.

An eel died upon being taken out of a well at Groton, Conn., the other day, where it is reputed to have lived for fifty years. According to the story it was placed in the well half a century ago by C. O. Harris, where it had remained ever since.

## AMERICAN ANGLERS IN CANADA.

Editor Forest and Stream:

The first arrivals here of American salmon fishermen on their way to their preserves are expected this week, particularly those that fish the Restigouche and other south shore streams. Lieut.-Gov. Chapleau, of Quebec, will fish Mr. Henry Hogan's river, the St. Anne des Monts. North shore fishermen will start next week and the week after. Messrs. Amos Little and friends from Philadelphia will again fish the Moisie, and the next trip of the steamship Otter along the north shore is sure to be taken advantage of by a number of American sportsmen. E. C. Fitch, president of the Waltham Watch Co., is expected here in a few days on his way to the Romaine. His namesake, Edson Fitch, of Quebec, accompanied by his friend John D. Gilmour, leave about June 9 for the Trinity.

Most of the members of the large party of trout fishermen from Meriden, Conn., and New York, whose names were given in my last letter, returned on Friday from the club house of the Metabetchouan Fish and Game Club, to which they belong, at Kiskisink. Both in the lake's outlet and also in the rapids above its inlet they had splendid sport. But they all came home and left their tails behind them. Not their own "tails," nor their fish tales, but the tails of their fish—tails and fish as well. They were all elegantly packed up in moss and ice, some in wooden packing cases, others in specially made tin fish-boxes, ready to be exhibited to admiring friends on their return home, as evidence and trophies of their prowess with fly-rod and line. And they were such a lot as any party of gentlemen and anglers might well feel proud of. But unfortunately they were all left behind by the train, upon the platform of the Kiskisink station.

Quite a number of distinguished American anglers went up to their various preserves a few days ago, including Dr. G. L. Porter and David F. Read and Miss Read of Bridgeport, Conn., and several members of the Nomantum Club, all of whom are from New Haven, and are now upon their club waters near Lake Bouchette. Among the latter are Messrs. H. Brown, president of the club; A. W. Hooper, vice-president of the club; Chas. E. Graham, S. E. Spencer, Minot E. Chatfield, Fred. W. Ryder, ex-United States Consul at Quebec and manager of the *Evening Leader*, of New Haven. Four other gentlemen who arrived here from the States by the same train are now fishing the same preserve. This party consists of Mr. George E. Hart, Mr. W. Durand, Newark, N. J.; Irving L. Atwood, of Waterbury, and M. M. Drake, of Torrington, Conn. Knowing that they were anxious to kill ouananiche as well as trout, and that the early spring fishing for the fresh water salmon must then be nearing an end, I urged them to continue on to the Ouiaichouan pool before attempting to seduce *fontinalis*, which was certain to wait for them, and am glad to hear that they had capital sport there, as also had Messrs. John T. Ross, John D. Gilmour and F. Holloway of Quebec. Exactly as anticipated, the ouananiche have now left the Ouiaichouan for the season and are reported in the Discharge, where the fishing that usually commenced there from June 12 to 15 is certain to be at its height by the 1st to 5th of that month. The streams in our north country are already down to their summer level, and the trout of the fountain is rising freely in nearly all of the lakes. Lake Edward, as usual at this season of the year, is yielding very large speckled red trout (*Salvelinus*) to bait-fishermen. One angler took 170 fine trout last week in two days fishing in Lake Quaquakamis, some of which weighed up to 4 and 5 lbs. each. Marvelous catches are reported also from the Laurentide and Stadacona lakes.

E. T. D. CHAMBERS.

QUEBEC, May 29.

## IN DEFENSE OF "RODSTER."

Editor Forest and Stream:

What is really the matter with that word "rodster" I have occasionally used in my North Shore letters, and which has has set "Tray, Blanche and Sweetheart" snapping at my heels?

It comes, I learn, from "way back," almost springing from the period when Dame Juliana Berners and Sir Izaak Walton wrote so instructively and charmingly of the gentle art. It is frequently used and figures in many old English works on the meditative art. I have seen it in *FOREST AND STREAM* long before I ever wrote a line for it, and have run across it in other papers and magazines that make a specialty of outdoor sports.

Last year some writer under the *nom de plume* of "Hoosier" sprang into the field, armed *cap-a-pie*, and hurled javelin after javelin at me with dire intent because I had given expression to the word. Now comes Brother Young in your last issue and files his demur for the same cause. He, however, is so polite and gentle—ever the mark of the gentlemanly sportsman—that I sincerely regret he is so much tattered and torn in running into the word.

I really can't understand why at this late date there are objections to its use, as I considered it a fixed vocable. Although it is not poetic it is pithy, and in addition a very convenient word with which to ring the changes in writing of the art contemplative.

Fearing some of your readers as well as your complainants may think there is no tangible existence for the word in dispute, I give below the definition, which I have taken from the Century Dictionary:

"Rodster, one who uses a fishing rod; a rod-fisher; an angler."

In connection with the definition in the same dictionary is the following extract taken from the *Daily Telegraph* of Sept. 2, 1883: "It is the intention of a number of our local rodsters to leave the city for different streams."

What more need be said unless I give a few similar words, such as song-ster, young-ster, drug-ster, pun-ster, mal-ster, deem-ster, game-ster, lap-ster, spin-ster, huck-ster, road-ster, team-ster, and so on *ad infinitum*.

ALEX. STARBUCK.

CINCINNATI, O., May 25.

Editor Forest and Stream:

Some years ago I had occasion to put in a word in defense of the word "rodster." An English cousin stigmatized it as slang; and now, through *FOREST AND STREAM*, Brother E. S. Young feels that Brother Starbuck has left him as limp as a line after the trout has escaped. Brother Starbuck can take care of himself, and neatly, no doubt. I wish to enter a plea for the rodster.

I cannot enlighten Brother Young touching the birth of the term, not being an adept in verbal toecology, but I hold it to be any man's right, or woman's, to coin a word. There is no law against it, and when one considers the liberties sometimes taken with Mother English, one should not be censured for adding to the vocabulary when the addition is not offensive, or violates no known rule of lexicology. That a man should be believed in his calling is a very old axiom. Noah doubtless was an excellent lexicographer, but it does not follow that he was versed in the art of angling, nor that he can lay paternal claim to all the words in the language.

"Doggy," for instance, is a not uncommon word, and yet I do not find it between the lids of authority. "Daub" is another term, unknown to Webster in the edition of 1884, and yet I presume that any coal miner who makes his mark could throw light upon it, though the servant girl might fail. "Dawlings" is not a very mellifluous term, it is not in the dictionary, yet I have known many a miner to complain when the vein "pinched" on him. "Dean," for instance, may have another signification than that of an ecclesiastical dignitary, or the head of anything; it may signify the tail, and yet be accepted.

Will Brother Young give us the derivation of "rodster," something that rides on the water and is ridden on the land? Is "rodster" not quite as silvery in sound? "Road agent" is not to be found in the dictionary, but is adopted, nevertheless, as a supplement. He suggests that "rodman" or "rodwoman" would be more acceptable. While a surveyor might accept the one or the other, were he a bachelor and she young and attractive, yet Webster has failed to recognize either. For myself I appreciate the terms from away back, having been born and raised in a hardwood country. Raised! I should say! I was not only raised but I frequently raised the neighborhood, and having been the recipient of deserved distinction in my youth, I necessarily retain a reverence for the rodman and the rodwoman. But you see Brother Young is condemned out of his own mouth, unless he can prove that Cain stood in no need of flagellation, because he must find the root in the beginning, otherwise "rodster" is as sweet a word as "rodman."

"Sir, here is newly come to court, Rodster; believe me, an absolute gentleman, full of most excellent differences, of very soft society, and great showing; indeed, to speak feelingly of him, he is the card or calender of gentry; for you shall find in him the continent of what part a gentleman would see."

LEWIS B. FRANCE.

## ON THE NORTH SHORE OF LAKE SUPERIOR.

(Continued from Page 470.)

OUR predictions relative to the appearance of the storm god were not realized when we arose in the morning, but there was an east wind blowing that prevented us from making the trip to Sand River which was on our programme for that day's sport.

Concluding to take advantage of the disappointment we remained in our quarters the entire morning, devoting the time to a general clean up of camp, airing of blankets, beds, etc., and in gathering balsam for the interior of our tents. The half-breeds in the meantime did the entire laundrying, and to add to the sanitary condition of affairs we all took a bath in the cold and pure waters of the grand old lake, and then donned some clean woollens, as the immaculate linen is not in it when it comes to an outing in these wild regions, it being entirely too dudish and uncomfortable.

After dinner, the wind being favorable and the weather at its best, with the sun in flame of rose and the sky a fairland in crimson, we concluded to sail to the Lizard Islands, some four miles distant. It was really a holiday to us, and as we left our quarters for the distant isles felt, with Tennyson's voyager, that—

"We left behind the painted buoy  
That tosses at the harbor mouth;  
And madly danced our hearts with joy,  
As fast we fled to the south.  
How fresh was every sight and sound  
On open main or winding shore!  
We knew the merry world was round,  
And we might sail for evermore."

Our boat cut through the enamored caress of the waves like a knife through satin, and as the pearly froth rolled from her sides it went dancing in silver bubbles with a radiant joy till they lost their sparkle from the submergence of the billows.

Ned was full of talk and of song, and as he leaned against one of the creaking masts with the bright sunlight beautifying his bronzed features and his snow white hair falling o'er his broad shoulders, while taking in the sapphire sea of clouds which lazily floated in upper air, sang a charming little gem from the German of Heine, entitled the "Lovely Fishermaiden." It thus runs with lute-like ripple:

"My lovely fishermaiden,  
Come steer your boat to land;  
And sit you down beside me,  
We'll coo here hand in hand.

"Recline upon my bosom,  
And have no fear of me;  
With me there is less danger  
Than on the raging sea.

"My heart is like the ocean,  
Has storm, and flood, and tide;  
And in its depths unfathomed  
Full many a pearl doth hide.

This was beautifully rendered by the sweet-voiced and silver-haired troubadour, his pure, strong tenor notes ringing out o'er the tinkling waves in a flood of delicious melody. The half-breeds were perfectly enraptured over the lovely song, and this time Kenosh literally meant what he said, "No flee on him."

The breeze, which had been gentle at the start, now began to show more vigor before we reached the islands, making the sails and cordage hum and the water roll merrily from the bow. After passing the first island we had to take a tack to reach the other, and wishing to make it on one stretch, took a "long leg" of about a mile and a half, which brought us to a small pier on the west side. In making this long tack we passed over a reef fully a mile wide which, in many places, was not over three feet deep.

After tying the boat at the pier, we all went ashore and

roamed around the island which, for the past two years, has been an abandoned fishing station, but which we ascertained from Peter was to be used again next year. The waters were simply having a three years' rest in hopes they would again produce a bountiful harvest. The rude shanties were still standing, but in a very dilapidated condition. The game on the islands consists principally of rabbits, and these have multiplied so rapidly during the abandonment that in a short walk of about half a mile along a narrow footpath we saw over twenty, and if we had desired could have loaded the boat with them in a very short time. No one seems to care for them except the Indians, and they can always secure enough on the main shore. The islands lay low in the water, are well wooded and are devoid of all picturesque effect other than as mere oases in the great waste of water.

Tiring of our explorations and the big fat rabbits, which seemed to be always on the jump, we sought the boat, and, hoisting sails, were once more cleaving through the waves that were beginning to freely toss the silvery snow-drifts. The evening breeze had not only puffed them up with proud disdain, but enriched them with a gleam like a diamond's sparkle. Right merrily the bounding billows danced and tinkled to the sweet song of the sea:

"—ever a jovial comrade,  
Who laughs wherever he goes;  
Whose merriment shines in the dimpling lines  
That wrinkle his pale repose;  
He lays himself down at the feet of the sun,  
And shakes all over with glee;  
And the broad-backed billows fall faint on the shore,  
In the mirth of the mighty sea."

A short distance from the island, on the south side, we strike another reef of considerable magnitude, and on reaching its outer edge it looked so temptingly trouty that we made a few casts with our lures, but nothing came to investigate them. Again the sails are up and drawn tight, and this time it is a rapid run for the camp, with the snowy frostwork tumbling from the bow in fan-shape rolls. While gaily bowling along, Kenosh told us of the grounding of the steamer China one foggy night last fall, on the reef near Maimaise Point. He was fishing then, near where she struck, and shortly after her grounding the hoarse winds were howling and the vexed sea violently turbulent, sending the white foam against the rocky shore with a mournful sound. Her engines were puffing away for dear life, and her alarm whistle, which was constantly sounding, could be heard for miles as it was caught up and carried along by the tempestuous winds. Not only was the steamer in great danger of entire loss, but the lives of the passengers and crew were at stake. The captain, a thorough seaman, was equal to the emergency, and having some thirty-five hundred barrels and sacks of flour aboard, ordered it all overboard. Away it went over the leeward side in a hurry, stretching itself along the shore for miles. When it neared land the huge billows would lift barrel after barrel, and where the rocks obtruded dash them against the solid walls with savage fury. Many of them burst and their contents lined the shore for miles, giving it an appearance as if it had just been visited by a heavy snow fall.

When the gray dawn came it disclosed the fortunate escape of the steamer, as well as a sea with the tossing barr-lins in every direction. The alarm at night had aroused many of the Indians at the point, and when the precious freight was seen at the mercy of the waves they gathered along the coast, many of them going up to their arm pits in the cold water to drag out barrel after barrel as it came within reach. The news of the rich booty floating around was carried to Bachewauung Bay, and then another swarthy salvage corps was on hand with their sailboats. One Indian saved four hundred barrels, another one hundred, while many secured from ten to twenty. All that could of the Indian wreckers concealed their booty in the dense woods, while others were content to allow it to remain where they had dragged it ashore. One sailboat took fifteen barrels of the flour down to Bachewauung Bay, and leaving it unguarded went back for a second load, which, on obtaining, returned with it to find their first load had been stolen. Undaunted and eager for more spoils, they returned for a third load, leaving a single guard over their last cargo. This, however, shared the same fate as the first, as it was taken despite the guard, who had been adroitly enticed away. The last load, however, they concluded to stand guard over themselves, and this they saved. Kenosh said that he secured fifteen barrels, and on taking it to the "Soo" came near being swamped when near Gros Cap Island, as the boat was almost buried on her lee side in a smother of foam and flying spume. He was using the same boat we had and stated it was overloaded for such a heavy sea as then prevailed, but the flour was so stowed as to enable them to dump it very quickly.

The China, on arriving at the "Soo," sent the steam tug Annie Clarke with the necessary papers to secure all that had been recovered by the wreckers. The 400-barrel lot was first seized, the Indian only getting a salvage of some \$40; and then the 100-barrel lot was taken and the remainder picked up in small lots. In all, about 1,500 barrels were recovered in a slightly damaged condition. Some 500 or 600 barrels, which were secreted by the Indian wreckers, were never found, and the remainder was a total loss. The flour was a nourishing booty for Mr. Lo, and as they have a law unto themselves it was in this case put in practice and it gave them an abundance of flour during the fall and winter.

Two Indians, with twenty barrels of the wrecked flour in their boat, were overhauled by the Annie Clarke and a demand made for the booty, but they defiantly refused to surrender it, declaring they would hold it at all hazards. The captain, humanely inclined and not wishing to force matters to a bitter struggle for the small prize, concluded to let them retain their hard-earned spoils.

Kenosh said it was a clear case of bulldozing on the part of the Indians, and that they would have come off their high perch very suddenly if they saw they were in for a fight.

"Indian no fool," he said, "he no want kill white man." Peter, who could talk English without the "pigeon-toed" twist, said in reply:

"I would not have given up the flour."

"What you do, then?"

"I shoot, that's all."

"You carry pistol?"

"No."

"How you shoot, then?"

"Well, I hit 'em with an oar."

"White man stand around with hands in his pocket? Bah, you crazy!"

"If I am crazy, you are a fool!"

At this exasperating rejoinder the hot blood flushed in Kenosh's face, and rising up he showed indication of climbing over both Ned and me to get at the irascible Peter with his huge fists. Peter, at this warlike demonstration, took an extra grip on the rudder handle, as if he intended withdrawing it to use as a cudgel of defense. Seeing it about time to interfere, I good-naturedly said, "Boys, you are both wrong and both right, and are making fools of yourselves. Stop your silly quarrel, or we will be compelled to put you both overboard."

This bit of pleasantries somewhat quieted him, but Kenosh, as he took his seat, had anything but a pleasant face, while Peter remained in the sulks quite a while.

Nearing the shore, Ned suggested as we had caught no trout that day that we try for a few to the west of the camp. Cheerfully assenting, the boat was at once headed for the fishing grounds, where we soon arrived, and began whipping the water in a very industrious manner. Ned got the first response and the first fish, and I soon followed with number two, both being about two pounds each. Coming to a choice place, an ideal home for a trout, Ned aroused an old patriarch, but failed to connect with him. He tried again and again, but could not draw him to the surface. When he had given up in despair of coaxing him from his creviced haunt, I tried my hand as a persuader and was rewarded with a baby trout, which I indignantly tossed back to the icy water. I wanted no such representative of the scarlet tribe after having seen Ned's ponderous trout break water. He said it was a case of extremes and that he would have been extremely glad to have secured his end of it.

After going a mile further we succeeded in getting two more, scoring evenly. The last one that Ned captured was much handsomer than any trout we had yet captured. I did think some of the others were matchless in their tinted robes, but in gazing at this one I fervently exclaimed *perfectio*.

The dark brown ribbon on this beauty's back faded into flames of a bright and delicate vermilion, which in its turn blended into orange and silver and lustrous opaline hues, while the mottling was in periodic dashes like glories of gleaming iridescence, the whole forming a rare composition in colors and tints infinitely lovely, really a masterpiece of celestial painting from the sapphired fount of purling brook "rolling in orient pearl and sands of gold." Ned said its tints were lovelier than those on a baby's heel or a butterfly's wing, and of course as I could add nothing further to this perfected painting I humbly capitulated to his masterly comparison. It was more than I had expected from him in this line, but then when one is always dallying with feathers of varied hues, from the bird of paradise to the tiny "hummer" in hopes of achieving his ideal of a perfect fly, the wonder ceases. He was evidently not color-blind, but simply stood alone as an original, and in that rôle a Rubens or a Raphael could not have given him a point that he would have accepted when deep in the architecture of a fly.

As the shades of evening were now falling we reeled up and gave the word for a rapid advance to camp. The sails were hoisted and with a beam wind then prevailing we went plunging, turning rainbows to the windward sun, and snow storms to the leeward, with a radiant dazzle in our wake.

On our way we passed two canoes, each having a family and a large one at that. One of them contained a wee bit of a papoose strapped to its cradle, and as we neared it asked the mother to hold it aloft. She smilingly complied, and as the sunlight played around its bronzed and serene face we gave it three rousing cheers which threw them all into hearty peals of laughter, with a few barks from the accompanying dogs. Indian mothers are devotedly attached to their children, although they may possess no attraction for the pale face. They prepare in their wooden cradles such an exquisitely soft and well arranged bed that it is plain they must have thought attentively on the subject.

The principal factor in this infant's house is a flat board. For this purpose poplar wood is selected; in the first place, because it is light, and secondly, because it does not crack and splinter. On this board a small frame of thin peeled wood is fastened, much after the shape of the child's body, and stands up from the board like the sides of a violin from the sounding board. It is fastened on with bats, because the Indians never use nails, screws or glue. The cavity is filled and stuffed with very soft substances for the reception of the child. In this bed the little beings nestle up to the armpits; so far they are wrapped up tightly with bandages and coverings, but the head and arms are free. At a convenient distance above the head is a stiff circle of wood, also fastened to the cradle with bats. It serves as a protection to the head, and if the cradle happens to fall over it rests on this arch. In fact, you may roll over an Indian *tekinagan*—so the cradle is called in Indian—as much as you please, but the child cannot be injured.

There is a special name for every part, however small, of the cradle; thus, for instance, the bow over the head is called *agwin-gueon*. It also serves as a receptacle for all the playthings and presents, which hang down from it and are within reach of the infant's hands. One can understand a rattle or bells, but what is an infant to do with carefully worked little moccasins hanging down over its nose; or a miniature imitation of a bow and arrows; or a wooden ring, over which leathern thongs are drawn; or a round piece of caribou leather, from which small pieces of stags' horn are suspended? But I suspect that all these things are placed there more for a good omen than as playthings; the moccasins, that the boy may be a good runner; the bow, arrows and bones, that he may become a famous hunter; that strange ring, with network of leather, I am told is good against illness.

The squaws at times display extraordinary luxury in the gaily embroidered coverlid which they throw over the whole cradle. I saw one woman use as a covering a wide sky-blue cloth, on which glistened at least a couple of pounds of pearl beads. She told me she had paid \$10 for it, a sum of no insignificance to the mother. The *apikan* or band, on which the mother carries the infant and cradle, is also often richly ornamented.

While we were within hearing of this voyaging party our boys chatted in Chippewa with them quite a while. They stated that they were going to Agawa to await the arrival of the paymaster, who, early in July, comes along

with his pension money for each Indian, who is entitled to an amount according to the size of his family. As high as twenty or thirty families gather at this point, and when they are all together, dogs included, it is really a motley collection. The dogs generally outnumber, as they are indispensable to them on their hunting trips during the fall and winter.

We were not long in reaching camp, for the boat skimmed o'er the water as swiftly as a swallow on wing, or, to be more literal, nearly so. Our *chef*, on landing, soon had us a very nourishing meal, two of the trout we had just taken forming part of the repast.

I noticed when the boys were taking their meal, after we had finished, that they were in a highly animated conversation, and soon their voices became so loud and earnest that it developed they were renewing the quarrel they had in the boat. As Ned advised letting them fight it out, we did so, much to our amusement, although it looked, in the vicious way they used their knives and forks on their food, that they would soon serve as scalping knives and spears. Both were as defiant as aroused Spartans, and it only required one blow to see the gore freely flow. We stood ready to interfere should it come to battle, but with the ending of the meal the quarrel also ended, and dove-like peace once more spread its gentle wings o'er the entire camp.

The evening was not a promising one, for the western horizon displayed a dark drapery of clouds that was ominous for the approaching morn. As night spread her sullen wings to shade the earth, the lonely character of our surroundings was doubly apparent. Even the heavens in solemn silence slept, no shifting clouds, nor sailing moon, nor twinkling stars. The woods were as quiet as if deserted, and one almost felt as if he had been transported to the early ages when the mosses and ferns had just begun to cover the primeval rock and the animals as yet ventured timidly forth into the new world. We retired that night somewhat depressed, but with a hope that the new day would be ushered in from the east with gleaming radiance.

[TO BE CONTINUED.]

## CHICAGO AND THE WEST.

[From a Staff Correspondent.]

They Broke the Law.

CHICAGO, Ill., June 1.—Some Chicago man, who hasn't got sand enough to sign his name, sends me a marked copy of FOREST AND STREAM, announcing catches of fish taken against the law of Wisconsin. Just for once I am going to break the honorable rule of journalism which refuses to notice anonymous letters and quote the substance of this, because the data have already been published in FOREST AND STREAM. The paragraphs referred to follow:

REY: OLDS, VIA WOODRUFF, Wis., May 15.—Mr. G. Henry High, of Chicago, caught in Trout Lake, May 14, 12 landlocked salmon averaging 3 to 6 lbs. May 15, caught 5 muskallonge weighing from 5 to 20 lbs. May 16.—Mr. J. Frank Lawrence, of Chicago, caught to-day, 8 muskallonge and a 9 lbs. bass; muskallonge weighed from 5 to 12 lbs. Mr. Robinson, of Savanna, Ill., caught to-day 24 muskallonge weighing from 4 to 12 lbs. Mr. Joseph Downey, of Chicago, caught to-day 24 salmon trout, one weighing 16 lbs.

JOHN B. MANN.

THREE LAKES, Wis., May 14.—Joe Swedesky and the writer caught last week 44 pike, largest 29 lbs.; 29 bass, one 4 lbs.; 17 pickerel, one 14 lbs.; 2 muskallonge, one 24 lbs. The prospects look good, the water is low, and the season is much earlier than usual.

F. R. FRENCH.

The writer says: "The marked paragraphs explain themselves. Why not call the attention of the 'sportsmen' to the fact that the fishing laws of Wisconsin prohibit pike or bass fishing before the first of June? Mr. French says 'The season is much earlier than usual,' but the criminal laws of the State are probably not governed by the weather, and the game warden of the district, it would seem, has a cinch in prosecuting and convicting these hogs."

I have personally almighty little respect or sympathy for the fisherman who will own up to killing 514 fish in one week. I know these great catches have been made in these magnificent Wisconsin waters, and it seems they can still be made by the industrious. But how long can it last? The railroads and the hotel men should discourage such work.

### Destruction on the Mississippi.

Mr. L. N. Converse, of Dubuque, Iowa, writes me concerning the depredations of the market-fishers along the Mississippi River, as follows:

"You have not the least idea the extent the seining is carried on in this vicinity or from the State line down to Muscatine. The Illinois Fish Warden, Chas. H. Blow, has done good work in Jo Davies county, Ill., and if the Fish Warden of Wisconsin would do the same along the shore of Grant county, Wis., it would do more good for fish protection. I wish you would stir up the Wisconsin officials. Whatever the FOREST AND STREAM says does good."

"If you ever take a try down the Mississippi, you will find the fish pirate on top and a state of affairs that will surprise you. The conditions of fish protection as you found them on Fox and Kankakee and other rivers near you, which you wrote up, are not a patch to what you would find them above Lansing, Ia., and this place."

Fortunately one can report the most satisfactory results of the work of the active Chicago warden, Mr. Blow, assisted by State Warden Albert Lenk. I am told that these men have secured over seventy convictions of netters and seiners. On May 29 alone, Mr. Blow destroyed fifty-two nets. On the same day he made four arrests and got three convictions. When he gets around to second offenses he is going to insist on the limit, \$200, and not be satisfied with the usual \$10 and costs. On May 17 he and Warden Lenk convicted four illegal fishers, at Hanover, Ill. At Savanna, Ill., the week before, they made eleven prosecutions. On May 21 they caught four fishers in the very act of using their nets. Since then they have landed four more that I know of, and, praise Heaven, they are whooping it up all along the line, and more power to them. Now, if Iowa will get a law (it has none) and every stream running in the Mississippi is bare of fish to-day, because the nets cut them off from going up—witness the once famous Skunk River, now absolutely depopulated, and if the Wisconsin warden will shake things up one-half, one-third, one-tenth as well as Messrs. Blow and Lenk have been doing for the Illinois shore, it won't be long till the fishing is good again in these fruitful waters. The few have been robbing the many, and with the same old fatuous American indifference we have been

letting the robbery go on unhindered. It is time to call a halt on this. Messrs. Blow and Lenk have called it. All honor to them and their record-breaking work, and full credit, too, to the men who have assisted them.

### Tarpon.

My young Texas friend, Johnnie Bludworth, writes me May 26 from Rockport, that the tarpon prospect for the season is very good. "Two tarpon have been taken that I know of, and maybe more, over at the Pass. They are very thick in there now, and I wish you could come down and go after one."

### In Wisconsin.

Fishing is good in Wisconsin. Gogebic opens June 1 and will be prime soon. The mascalonge waters are about at their best now for the spring season. From my old grounds at Phantom Lake I hear of one string of bass and pickerel, 12 fish, weighing 84 lbs., and a number of large pickerel. Late heavy rains have hurt the trout fishing in the streams. At Hudson the Willow River trout preserve, belonging to H. J. Drake, of St. Paul, overflowed; 70,000 yearlings and 50,000 fry were lost. A local hatchery lost 300,000 fry and 20,000 yearlings.

### In the North Woods.

Messrs. W. P. Mussey, T. Benton Leiter, William and J. Haskell, Frank Gray and George Holden, all of Chicago, all left last night for a two or three weeks' trip after large, long lunge fishes and a few bass and salmon trout in the Wisconsin North Woods. They will go to Plum Lake for the most of their fishing. Any fish weighing less than 50 lbs. will be contemptuously returned to the water, I am assured. Anyhow, this party will have a large time, certainly.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

## MORE ABOUT THE WHITEFISH.

DETROIT, May 31.—Editor *Forest and Stream*: Your notes on the Lake Miltona whitefish and the other species of the genus *Coregonus*, will interest every person who has had the pleasure of reading them and the thousands who have made the acquaintance of this splendid fish. There are some points, however, in which the observations of some of your correspondents, and the reports quoted in your article differ from the experience and observation of fishermen who have taken the fish in the lakes which make of the State of Michigan two peninsulas. You say, "It might be supposed that the second group, to which belongs the lake herring, the Miltona whitefish, the long-jaw and several others, would take the hook rather than the common whitefish if any of them could be captured in that way; but, singularly enough most of the reports of taking whitefish on a hook relate to the small-mouth form—the common lake whitefish." This is not the experience along the waters of any of the Great Lakes. "On the contrary," as Sam Weiler would say—"quite the reverse," as was stated in my letter from Alpena, published in the current issue of FOREST AND STREAM. There is no doubt in my mind that these conflicting reports are due to the errors of anglers who have taken the alleged whitefish in misnaming the fish they caught—it is a common one, and perhaps natural enough under the circumstances. The illustration of the Miltona whitefish is a very lifelike picture of a long-jaw, and in this case a very fair picture, except as to the formation of mouth, of the lake whitefish of Michigan.

The ciscos of the Wisconsin and Minnesota lakes are not to be compared to the whitefish of the Great Lakes, in their size or flavor, or richness of flesh. The quotation from Mr. Van Cleave, that "the whitefish of the lake region referred to are taken altogether in nets," and that they "run from 14 lbs. to as high as 6 lbs.," is true of the Michigan whitefish except as to maximum weight. I have seen whitefish taken from pound nets that weighed from 5 to 14 lbs., and indeed rare specimens that reached 27 lbs. Your readers will perhaps remember that I sent (in 1888, I think) FOREST AND STREAM a note on the capture at Monroe, Mich., in the nets of Duclo & Co., a whitefish which pulled the scales at the figures just quoted.

The long-jaw whitefish, in the opinion of fishermen who are thoroughly familiar with the two groups, is the only one which takes the hook and it is the only one having a mouth that would hold the hook when caught.

KEUKA.

### The Trout of the Gunnison.

SALIDA, Colo., May 29.—Our trout fishing season opens June 1 and we are making preparations for a great season. The snow is about out of the mountains, and the fly-fishing will begin about 15 days earlier than usual. The best waters in our State for trout are in Gunnison county, of which Gunnison City is the county seat. The Gunnison River and its tributaries are the only streams which are easily reached, and never fail to give the lover of rod and reel a day of enjoyment from June until November. The Gunnison is a stream of pure crystal, with an average width of 100 ft., and is a paradise for the fly-caster. The trout average about 1 lb. in weight, although there have been trout of 7 lbs. weight caught within a few miles of Gunnison City, and Messrs. Skinner & Herrick, of the La Veta Hotel, have two mounted specimens of over 7 lbs. each, which were caught last season, and trout of 2 to 8 lbs. are plentiful. At Kezar post office, 12 miles west of Gunnison City, can be found as fine waters as can be wished for, and Mr. A. Pomel, the genial postmaster, and his sons, take pleasure in entertaining all who may stop off or call to take the trains. Mr. Pomel is one of the old timers who settled in the Gunnison Valley "when Pike's Peak was a hole in the ground," as the saying is, and while he has not made a business of catering to sportsmen in the past, he says that he is going to see that all who stop off there this season are treated just about right, and that his rates will be \$1.50 per day. Within 12 or 15 miles of his house black-tail deer, elk, antelope and grouse can be seen from July until January, and for the benefit of any Eastern sportsmen who may come to Colorado this season, I take pleasure in recommending Gunnison and its hospitable people. I have lived in Colorado 15 years, and have failed to find a section which beats Gunnison for trout fishing and hunting.

PIKE'S PEAK.

A 27 lbs. halibut was caught at Monterey, Cal., recently in rather a novel manner. A fisherman was unloading his catch at the wharf when the halibut swam up alongside the boat, and the man seized his spear and with a dexterous thrust secured the prize.—*Evening Post*.

## NEWS FROM THE FISHING WATERS.

HUNTER, N. Y., May 26.—With this I send you a photo of our first day's fishing, April 16. I say "our," for I caught only two of them; the rest were taken by a friend. I just stepped out for a few minutes' fun after I had closed my school for the day and captured the one that local fishermen have all been after for the past year or two. My first one taken was 12½ in. in length, weight about 4 lbs.; the second 18 in. in length, weight exactly 2½ lbs. Taken within a pistol shot of the Roggen Hotel, in Tannersville. Doubtless you remember the place—Howard's dam. They were our regular brook trout. In fact, just in this vicinity, the Californias are rarely taken, though the streams have been stocked with them.

The fishing is only fair this spring. Too many fishermen are anxious to excel in numbers, so no matter what the size, they never put a fish back.

Partridges have wintered well, and as we have a county law protecting them until Oct. 1, there will be sport this fall. J. K.

CAMPBELLTON, N. B., May 26.—Salmon have arrived, also three or four anglers. I have only heard of some six or eight clean fish yet. Next week I expect there will be a good run with the spring tides. Nets getting few fish, owing to strong east winds; but are ready to receive them on arrival. Kelts very plenty; water in tip top condition and lumber all down to booms. JOHN MOWAT.

REYNOLDS, Trout Lake, Wis.—Mr. Clark, Mr. Downey and Mr. Leach, all of Chicago, caught in one day's fishing fifty-five muskallonge, five bass and six pike. Muskallonge weighing from 5 to 20 lbs. Fish were caught in the Gresham lakes, three miles from Trout Lake. JOHN B. MANN.

NEVERSINK, FALLSBURGH, Sullivan County, N. Y.—On May 19, Mr. S. L. Rodas, of Brooklyn, and Mr. James Curk and Mr. B. T. Bush, of New York city, caught 132 fine trout out of the Neversink; and on May 22, Stephen Sprague and George Sarles, of New York, caught two large baskets of fine trout.

LEBANON, N. H., June 1.—The outlook for fishing for trout in brooks and streams around here is very poor. May 1 I took a trip of eight days through the eastern part of Grafton county, and where two years ago I would catch from 50 to 100, I would get from 10 to 25; and a third or more of them would have to be thrown back, being (some of them a good deal) under size. I know of two crack fishermen who drove 40 miles one day and returned with seven trout; so I was not so much surprised when "Von W." said that a friend of his caught only one trout in that beautiful brook in which I think I caught on May 31, 1891, 85. There are, I think, few men that like to fish (for trout alone) as well as I do; but I wish that they would pass a law, and enforce it, of \$5 fine for every trout caught in any brook or stream south of the White Mountains for three years, and see then if we could have some decent fishing once more. MASCOMY.

MINOCQUA, Wis., June 2.—James Lane, John Lewis and E. T. Hubbell, of Illinois, caught 10 muskallonge each, weighing from 8 to 15 lbs. L. WEIRHAR.

SANDUSKY, May 31.—The steamer Visitor, recently seized for alleged violation of Canadian marine laws, has been appraised at \$8,000 at Amherstburg, and will be released under bond, returning to Put-in-Bay pending the hearing of the case. The Leroy Brooks will probably be released within a day or two in the same way.

ROPEVILLE, Texas, May 29.—Our fishermen are making some big catches this spring of tarpon, junefish, jackfish and all other kinds. F. R.

LAKE WINOLA, Scranton, Pa., June 1.—In Lake Winola (Wyoming county, Pa.) the bass are spawning about two weeks earlier than usual and apparently in unusual numbers. They ordinarily leave the beds about July 1. There is talk that the Lake Winola Association will this year extend the close season until June 15. CAPOUSE.

On Saturday, May 26, the writer caught a speckled brook trout in Frank Lake, Adirondack Preserve Association, weighing 8 lbs. 10 oz., trolling with flies. This trout took a large red-bellied fly. He had been out of water at least two hours when weighed. A. P. A.

CANADENSIS, Pa., June 4.—Owing to frequent and heavy rains the streams have all been at a high stage for two weeks, improving the fishing on the smaller, but raising the larger streams to a degree hardly permitting either wading or fishing. One of the most successful parties at Price's Spruce Cabin this season came there from Troy, Pa., and I am informed caught over 400 trout in four days, the first of last week. My own fishing was confined to a part of one day in the Broadhead Creek, which was about a foot above its average stage, and almost impassable. With the stream in such a condition I was surprised to take a dozen fair fish with the fly. From now on if the present prospect of fair weather is fulfilled the fishing should be good. T. H. G.

## A Remora Caught by Hand.

In one of your recent numbers you describe the remora, which has a way of fastening on to other fishes, sharks, turtles, etc. But did you know that they occasionally fasten on to boats? On my trip around to New York with Mr. John F. Small in the Exile recently, while off Chatham bars, I happened to look over the stern of the boat and saw about 2 ft. of a fish's tail sticking out beyond it, waving gently about. I made a grab for him, but he slipped through. I grabbed for him a second time and missed, but the third time I got him and threw him into the standing room. He immediately fastened on to the floor. I put him in a bucket half full of water, out of which he soon jumped. I put him in again, but he was such a trouble to us that finally I threw him overboard, and he went on his way rejoicing. He was about 3 ft. long and had four or five small holes or openings on each side of his neck. His body was a kind of brown or gray, mottled. CLIFTON W. A. BARTLETT.

## Baby Trout and Grouse in Spring.

LEBANON, N. H., June 1.—I returned last week from a carriage drive of some 150 miles through the southwestern part of Vermont. I fished in several towns among the Green Mountains, Jamaica, Winhal, Stratton, etc., and I was very much disappointed, for I had had such glowing accounts and had also received such beautiful letters from my friends living there. One day by putting in a full day's work I did foot sixty, and put back 25 per cent. of them, and if the fish warden had been at my elbow I don't know but what I should have kindly consented to have relinquished another 25 per cent. rather than to have had any difference of opinion about it. All down that way laughed at the idea of a trout being put back; if he had the spots large enough to see he was all right. That is what is making the trouble with the trout fishing. I stayed over night once where I saw four fine ruffed grouse tails arranged on the sitting room walls. I knew that the man had lived there only a short time so I asked him where he got them. "Oh," he said, "I killed them since I moved here." "But are you not afraid of the game warden?" His reply was, "No one sees my game after I once get it." And that is the way that a sportsman "gets left" who is willing to live up to the law. Baby trout are caught before they have hardly got their eyes open and grouse are killed when they are nesting. I begin to think that there is no show for the game except in the private preserves, and I have always despised them. But nail that plank in the platform—No game to be sold. MASCOMY.

## An Albino Trout.

DINGMAN'S, Pike Co., Pa.—Editor Forest and Stream: While fishing for trout on May 2 I caught an albino trout, if it be not a variety of that fish. Mr. E. T. Hoffman has recently stocked the upper waters of Dingman's Creek, and it has occurred to me that the fish might be a new variety; and yet I know nothing of a white trout.

I was "poking around" among the sticks and alders, when to my astonishment I caught sight of a white fish—hooked. It was not over 5 in. long, and as I saw it white as it came up I said, "This is a shiner or a silverfish." But I thought, "I have never seen, in my experience of many years, anything but chubs and occasionally a small pickerel." However, as the line swung into my hands I was surprised to see a white fish, and as I extended the palm I said, "No scales here; and the form of a trout is perfect." I looked closely as it lay on my hand. It was white, with outlines of the mottlings of the back. I could not see the red spots, while the yellow ones seemed whiter, if possible, than the spots of the sides. Of course the fins and tail were even clearer and whiter than the body. Of course I released the fish as soon as I could. It was gasping for water, and I saw it must perish soon. It was a vigorous one for so small a fish, and it dove down lively enough among the submerged alders. Maybe it will be found again. A. H. G.

[We believe that we have recorded a similar case before.]

## Fishing Among the Thousand Islands.

THE New York Central & Hudson River Railroad has sent us a copy of a convenient, comprehensive and well arranged pamphlet descriptive of "Fishing Among the Thousand Islands." It is No. 15 of the "Four Track Series" of handbooks for travelers, coming from the Passenger Department of that road. The author is James Churchward, "an expert fisherman, whose experience of over ten years in pursuit of his favorite sport in the waters of the St. Lawrence, has amply qualified him to advise and direct in all matters pertaining to that subject."

The pages are embellished with characteristic illustrations, and all the best fishing grounds of the St. Lawrence River are correctly located by charts printed in colors, so that they cannot be missed. Everything about tackle is also minutely described and illustrated. A copy of the book will be sent free, post-paid, on receipt of five 2 cent stamps, by George H. Daniels, G. P. A., Grand Central Station, New York.

## Whipping the Stillwater.

THEY tell a piscatorial joke on our friend John D. Losekamp, the famous clothing merchant of Billings and Red Lodge. A few weeks ago Mr. Losekamp and his friend Col. Hough, editor of the FOREST AND STREAM, were enjoying an outing and whipping the Stillwater River for trout. The merchant was having good luck and pulling out trout by the wholesale and had about 100 of the pretty finny tribe captured, and the heart of Col. Hough was on the ground in despair. Pretty soon the journalist succeeded in pulling out a 4 lbs. trout and it changed his sour visage into rapturous smiles. Mr. Losekamp requested of his guest that they move on up the stream. Col. Hough indignantly refused to move, and informed his benefactor that he had all the fish he wanted and "was no Montana hog."—Red Lodge (Mont.) New Idea.

## Trout Near Baltimore.

BALTIMORE, Md.—The new trout law relating only to Baltimore county protects the fish from July 1 to March 1, and makes the lawful size 6 in. We might almost say we had no trout, but happily there are a few. The gentlemen of Green Spring Valley have stocked many of their streams and we of the Tenth District have always done all in our power to preserve this sport. Nevertheless streams in which our fathers caught forty or fifty in an afternoon are now without a fish, due principally to the mills and partly to dynamite. Where suitable streams have been stocked with 5,000 trout, when the fish left the cans they were forever lost. ASA B. GARDINER, JR.

## Fishing Camp and Warship.

BOSTON, Mass., May 28.—Two years ago Admiral Sir John Hopkins, of Her Majesty's warship Blake, was entertained at the summer home and fishing camp at Gaspe, P. Q., of John Fottler, Jr., of this city, ex-president of the Massachusetts Fish and Game Protective Association. To-day the Admiral returned the compliment by entertaining Mr. Fottler, wife and daughter at private dinner aboard the Blake. The Admiral is a thorough sportsman and enjoys discussing camp life fully as much as going into the subject of 6 in. rapid firing guns. It is a great pleasure to meet such a man. He expects to spend a week fishing on the St. John River this season. B.

## Butterfield and Mill-Site Lakes.

ITHACA, N. Y., May 31.—Well down in the summer of 1893 an advertisement of the Dollinger House, at Redwood, met my eye, and I determined to pay a visit to the locality. Although the weather was very unpropitious, myself and friend found excellent accommodations at the hotel, the headquarters of fishermen, and good sport in Butterfield and Mill-Site lakes, which are scarce a half mile apart and in the immediate vicinity of the house. Mill-Site Lake is about one mile long and perhaps an average of one-half mile wide. In this lake peculiar salmon trout, often of large size, are caught in abundance, differing from all others I have ever seen in having a tail much resembling a mackerel, instead of the square or rounded tail generally found. They are good biters and game to the last. Black bass of the small-mouth variety are plentiful in the same lake. Butterfield Lake is near five miles long, broken up with islands and deep bays, perhaps an average of less than a half mile wide. Here are caught bass of large and small-mouth variety, glass-eyed pike, pickerel, immense schools of large perch, with an occasional catfish to furnish variety. Self and friend expect to visit Redwood and fish the twin lakes for a couple of weeks following the 11th of June and then again late in September. Will note for FOREST AND STREAM the success we may meet. J. H. S.

## "Kingfisher" and the Bull.

"The old Black Bull  
Came down off the mountain,  
Long time ago."

"Old Sam," in FOREST AND STREAM of May 26, has covered himself with glory as a purely imaginative writer of "bull stories;" and as a vigorous drawer of ye long bow I make my obeisance to him and take a back seat, figuratively speaking. Did I not know Sammy so well, I would lay his outburst to an overdose of "O (old) F (ashioned) (Copper)," but in this case I am fain to think it may be charged to the "water" of the famous blue grass region in which he lives, which, it is said, exerts a peculiar, and at times bewildering influence on the imagination, notably in the relation of bull and fish stories. Not to give Sam's powers in this line too abrupt a backset, it is only necessary to call attention to one of his many flights of fancy in the tale of the bull, to cast a shadow of doubt on the accuracy of the other main "pivots" of the narrative, and that is that I was never known to be guilty of wearing a coat when on a trout-tramp. But the story is so well told (on a side of the fact that Sam was 200 yds. away and not "in" at a single act or scene of the performance), and so laughable withal, that I forgive him—for his many other good qualities—and only hope that the "old daisy" may be with us again in camp this summer to "jine" me in some more "bull" episodes and other pleasanties that have cemented friendships in the "camps of the Kingfishers" that will abide till we make our last cast.

And now, to reel up, I wish to add my mite in praise of my old friend and comrade, "Kelpie," and thank old Sam and the editor at the same time for their good words for him. I heartily indorse it all, it is good to know and have as a friend.

The picture of him in FOREST AND STREAM is a most excellent one, albeit a trifle more "rotund in feature, maybe, than he usually shows in camp. JEEMS MACKEREL.

CINCINNATI, O., May 27.

## Fishculture and Fish Protection.

## Pound Fishing as Seen by a Pound Fisherman.

Editor Forest and Stream:

It was with much interest that I read the proceedings of the Coast Fishery Conference, and with much regret that the sportsman fisherman and net fisherman cannot meet, and work for the good of each and the community in general. I am a net fisherman. I set pounds and believe in netting. But I do not believe in the inhuman practice resorted to by most pound and trap fishermen, and think it time that not only the sportsman, but the community demand a change; and that at once a change that will prohibit the use of netting so fine as to destroy more fish than are saved for market. The fine netting has almost destroyed fishing in the salt ponds and bays; and where a few years ago one could enjoy good fishing with hook and line for tautog and white perch, to-day he would find nothing. Then with a small seine it was not unusual to take from ten to twenty barrels at a single haul; now one might get as many fish instead of barrels.

With striped bass fishing it is the same. The bays and salt ponds were full of them, and large quantities were taken with gill-nets, while shore seines were used outside; and it was a paying business when bass sold at from 5 cents to 7 cents per pound. To-day one could not pay expenses with bass at 25 cents to 35 cents per pound. Scup were taken in almost any desired quantities with shore seines, and paid well at one to two dollars a barrel, with thousands of loads for manure at 25 cents per load. To-day with the same seine one could not pay board—even fish-camp board.

Yet they tell us that fish are governed by natural laws, and that the free use of the most improved nets and pounds has no effect upon the supply of fish; that there is no scarcity; that fish are as plenty as ever. Why is it that scup pounds are set out wider and wider, until some are 2,500 to 3,000 ft. wide, when a few years ago scup ran in countless numbers almost in the surf? If there are as many fish now as then, why do the pounds take less now than the shore seines could then, while now the shore seines get nothing?

We read in the Fish Conference report that there is no waste of food fish taken from pounds. I have seen thousands of barrels taken, but never saw anything of that kind. How are the fish handled? I will write regarding the fishing in this vicinity, where large quantities of netting are used and a large amount of fish taken, and ask, have the community and the sportsmen a right to say anything?

In March the setting of small pounds begins for smelts, alewives and flatfish. Then begins the destruction in a very small way. Small unsalable fish are put on the land. A little later fish get cheaper, and flatfish, which sold for 5 to 8 cents per pound in the winter are now put with the small smelts, tomcod and flatfish for manure. By April 25 a large amount of alewives, together with tons of small tautog, which now run, are thrown up. Scup pounds are now put at work and when scup come large and small are bailed on to the boat and they start for a shipping point, and thousands of barrels of small scup are killed and when sorted and barreled are thrown overboard, put on land or into pomace. Usually, take the season through, more small fish are wasted than salable ones are saved. After the run of scup the pounds are taken up, but many summer pounds are set, and the slaughter goes on.

But we have not come to the worst, which is fall pounding, in bays, rivers and salt ponds. Then the destruction is beyond belief by one who never saw it. These pounds are put in by the hundred. They are usually of fine netting, and give fish but a small chance to escape. The netting being fine for eels, is fine enough to take almost everything, and hundreds of barrels a day of tautog, white perch, bluefish and flatfish, too small for the market, are put on the land for manure. I have seen tons in a heap, of fish from the size of one's finger to salable size. Every one can see it and should see it next fall, only take the trouble, if fine netting is allowed. It would surprise you to see two or three barrels of fish put on the land to every barrel shipped—fish that if allowed to grow one or two years would be good salable fish.

I trust every lover of fish and fishing will look into the matter and see pounds hauled. Next summer when at the

shore, ask the old residents what scup, bass, tautog and perch fishing was before pounds were set so extensively. Ask them if pounds are destroyers of fish to any extent. They will tell you that the bay, river and pond fishing is past, while the ocean fish are no longer plenty to pay even expenses of seining, as was practiced a few years ago at a good profit. They will tell you that fine netting and plenty of it has made fishing what it is. These people will tell the truth, as they have no financial interest in the use of netting.

You will find the destruction of fish wherever you find pounds, and to say that fish are as plenty as ever, even in the ocean, is to say something that not one in twenty believes.

Scup pounds are perhaps the least destructive of any pounds, as the netting is larger and the smallest fish go, so that the ones destroyed are but little too small to save. The run of scup is short, and as soon as the run is over the pounds are taken up.

There are pound fishermen who sort the fish and allow all small ones to go, but they are very few. Why should fish continue as plenty as ever when fishermen have so little regard for them and stand ready to destroy every small fish because it is not salable? I heard often fishermen say that to let them go would be simply to handle them again, and that did not pay; besides they made good manure. The trouble is the same with fishermen as with others; they wish to get everything that pays, and use fine netting to allow nothing to escape. And until such netting is prohibited fish will continue to grow scarce. It is for the interest of fishermen, net manufacturers and fish dealers, as well as the community, that we have a change, especially in the pound used in bay, river and inland waters. While it would be a loss to fishermen for a year or so, it would be a gain in the end, as the extra amount of salable fish taken would soon compensate for the loss at first. There would be something left to grow.

A thorough investigation into pound, trap, and purse seine fishing would mean a change in many ways and a blessing to the community. As before stated, I believe in the free use of netting, only have it of a size that allows the small fish to go.

FISHERMAN.

#### Outlines in the Susquehanna.

BALTIMORE, Md., May 30.—*Editor Forest and Stream:* The good tone of FOREST AND STREAM in the way of the protection of fish and game, will recommend it to all true sportsmen, and we, in Maryland, are heartily in accord with you with respect to the abolition of the sale of game, birds and fish in our markets. You find that there is so large a number of your people engaged in the killing and sale of game birds and fish, that it is a very difficult matter to get legislation prohibiting it. We are laboring under the same trouble, and unless we have concurrent administration of the laws in Virginia, Maryland and Pennsylvania, we are powerless for the protection of our birds and fish. While on the Susquehanna River in Pennsylvania fish baskets are prohibited by law, in Maryland such fish pots are not prohibited. In Pennsylvania, bass and pike-perch (wall-eyed pike) are to be caught by rod, hook and line. What do I see every day in the Susquehanna River? Lines stretched from 200 to 300 ft., and right in the faces of the fish wardens, whose duty it is to destroy such lines and arrest such offenders. Take from Harrisburg to York Haven on the Susquehanna River, and you will find an outline for every half mile. Yet the State officers appointed to see that the law is obeyed and to prosecute offenders against the law, do not do anything. I know whereof I speak, and you can quote me as good authority for the statements if question is made. I do think that there is less regard paid by people on the Susquehanna River, Sunbury to Safe Harbor, than exists in the most extreme outposts of the Rocky Mountain territory. The supineness of the wardens is accountable for this state of affairs, and as I said before you can quote me as authority and I will prove my statements.

Y.

#### Norway's Exhibit at the World's Fair.

THE undersigned, late judges of awards of the Fisheries Department, World's Columbian Exposition, Chicago, realizing the great excellence and comprehensiveness of the exhibit of Norway, and regretting the exigencies which arose to compel the withdrawal from competition, desire to express our appreciation of the labors of Dr. S. A. Buch, Fish Commissioner of Norway, in the preparation and installation of the exhibit, and to the committee at Bergen for the participation by Norway in the World's Columbian Exposition, for the great energy and devotion it has displayed in making the exhibit interesting and complete.

We feel that it is a duty we owe to a nation so renowned for the fisheries that it should receive some fitting and reciprocal recognition for its friendly interest in crossing an ocean and traversing a thousand miles of land to participate in an international fisheries display.

We therefore declare it to be our opinion that the exhibit of Norway was so great and comprehensive a representation of the fishery methods, apparatus and products of that country as to elicit the most profound admiration of all interested in the subject of fisheries, and that the preparation and installation thereof is deserving of special mention, and is a great credit to Dr. Buch, the committee of Bergen and to Norway as a country.

L. Z. JONCAS, Chairman; D. W. HALL, Secretary; N. O. CRAM, Portland, Maine; W. R. CAPEHART, Ayova, N. C.; C. P. SNYDER, Charleston, W. Va.; WILLIAM L. MAX, Omaha; Nebraska; J. A. HENSHALL, Cincinnati, Ohio; ANDREW WEBER, Chicago, Ill.; W. P. SEAL, Philadelphia, Pa.

#### Sunday Shad Netters.

NEWBURG, June 4.—Last Friday one of Game Protector Kidd's suits against the shad fishermen of Sing Sing was tried in Circuit Court at White Plains before Judge Brown of this city. This was the only case tried that day and was considered a test case. The defendant, Peter Smith, Jr., was found guilty of taking shad from the Hudson River in a net on Sunday, and was fined \$100 and costs. During the trial an effort was made to show that the nets used were set for bass, and that they were not Smith's, yet he received pay for one-half of the shad caught, he shipping the fish and receiving the checks. Testimony was given, however, to show that Peter Smith, Jr., really owned the nets. There are several more of these suits against Sing Sing men, but as the term of court ended that day no more will be tried for at least two months. It is said that Smith will appeal to the General Term from the decision of the court and jury. The case was tried for Protector Kidd by Russel Hadley of this place and J. F. Brennan of Yonkers.

Protector Kidd has commenced a suit against Leonard McCloud for netting fish in Greenwood Lake. The suit will be tried in the Supreme Court this month at Goshen, this county. The last FOREST AND STREAM contains an article that looks bad for McCloud.

NEWBURGH.

#### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals.

For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

## The Kennel.

### FIXTURES.

#### DOG SHOWS.

Sept. 4 to 7.—Des Moines Kennel Club, at Des Moines, Iowa. M. Bruce, Sec'y.  
Sept. 10 to 14.—Toronto Industrial Exhibition Association, at Toronto. C. A. Stone, Sec'y.  
Sept. 18 to 21.—Rhode Island State Fair Association, at Cranston, R. I. W. W. Dexter, Sec'y.

#### FIELD TRIALS.

Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallaugher, Winnipeg, Sec'y.  
Nov. 6.—United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.  
Nov. 6.—International Field Trials, at Chatham, Ont. W. B. Wells, Sec'y.  
Nov. 23.—Eastern Field Trials Club, at Newton, N. C. W. A. Coster, Saratoga, N. Y., Sec'y.  
Nov. 23.—Philadelphia Kennel Club, at Newton, N. C. Dr. G. D. B. Darby, Philadelphia, Pa., Sec'y.

#### English Setter Sires.

BY P. H. BRYSON.

THE selection of sires depends largely upon what kind of dog you want to breed; whether a shooting dog to put in the hands of the average trainer, to train to kill birds over, or the high strung nervous dog to put in the hands of the expert trainer, that will retain the natural dash and vim of the dog, and get him under control so he will handle game well and can be handled himself.

The characteristics of the three noted sires, Gladstone, Count Noble and Roderigo, will be first noticed.

The Gladstone blood combined with the Druid-Ruby produces level-headed game finders that are no trouble to train, and make the best shooting dogs of any coming under my observation. They are free from crankiness and cannot be spoiled by a novice. They are high-headed constant hunters; but, as a rule, they have not the speed, snap or dash from the start, of some other crosses I will mention. The Gladstone blood seems potent to breed on, or nicks well with almost any other blood.

Count Noble crossed on the Gladstone blood produces wonderful quick, snappy dogs with splendid noses, great speed and nervous force that should be, as a rule, in the hands of expert handlers, in order to have them handle their game well, and at the same time retain their great snap, speed, range and other natural qualities.

These dogs are easily ruined, and have so much nervous force that they must be handled judiciously. If you cut their natural qualities, they are liable to pester, false point and make a poor exhibition in the hands of the average trainer.

Some of Count Noble's get that have not the Gladstone blood in them are dogs of so much nervous force that they are not reliable starters in field trials. I could name some that work perfectly in private, repeat their heats in private with perfect satisfaction, that will run one, sometimes two, heats in public that cannot be beaten and then get so nervous when run longer that they lose control over themselves and cut their own throats.

The popular opinion of such dogs is that they are fools. Such is not the case. Were they fools they would not repeat their heats at all times in private satisfactorily. They would be fools in private as well as in public. I have seen them in the trials become so nervous they would have a nervous chill, tremble, look wild and convey the impression that they had no sense. They simply had so much nervous force they could not control it on occasions of undue excitement.

If the bitches with these qualities were bred to the level-headed best sons of the Gladstone—Sue cross, or their sons, they should produce high class field trial dogs. They simply need a balance wheel to breed on.

Roderigo has produced many great field trial winners. I have often heard it said that they never do anything after they leave Mr. Avent's hands; a compliment to Mr. Avent, though not intended as such. If Mr. Avent understands so well how to control the strong nervous force of the Roderigo dogs, and run them to the front in the best company, he certainly should be regarded as superior to his brother handlers. The sons of Roderigo have all the nervous force you can get under control and, as shown by the records, more than the average handler can utilize to advantage.

These dogs have not proved the successes in the stud we had a right to expect from their high breeding and frequent winnings. They are so frequently bred to their kind, the continual breeding of two closely related nervous animals intensifies their nervousness until a point is reached that this extreme nervousness cannot be gotten under control by even expert handlers, hence others, not experts, cannot be expected to do anything with them, and the result is they are condemned. They cannot be used as shooting dogs, nor successfully handled as field trial dogs.

As a rule, according to the records, small nervous dogs, although possessing great field trial merit themselves, have not proven the success as sires that the larger and in some instances less successful dogs have done; and it appears to those who have studied the matter that size as well as breeding enters into the selection of a sire, as the following will show: Gladstone was a dog that would weigh 50 lbs., in hunting condition; Count Noble more; Roderigo about 45 lbs.; Gath's Mark over 50 lbs.; Gath 45 lbs.; Gladstone's Boy 60 lbs.; Count Wind'em was a large dog; King Noble a large dog; Llewellyn's Dan was one of the largest setters in England; Gath's Hope over 55 lbs.; Vanguard 50 lbs.; Paul Gladstone furnishing the exception, about 40 lbs. Paul Gladstone, though not so small as many that ran successfully in the last Derbies, is entitled to rank as a successful sire, not in the number of winners to his credit, but in the quality of the few that won. Paul Bo and Ollie S., his get, take high rank as field trial dogs. It must not be supposed that the sire is the only factor in breeding; do not overlook the dam. In my next article I will discuss the dams of English setters.

#### The Beaufort's Prince Case.

ONE of the most peculiar cases of mistaken identity has just been partially settled in a Boston court. It will be remembered that at the Boston show Dr. Lougest's well known mastiff, Beaufort's Prince, was attacked by Mr. Martin Fallon, of Bridgewater, Mass., the latter maintaining that it was a dog called Carlo which he had lost in 1893. Mr. Fallon gave a bond of \$500 conditional upon the dog's return, and here the case rested until the courts should decide the dog's identity. The fact that the dog was so well known in the kennel world made the case a most interesting one and only proves once more how easily a person not particularly well up in dogs may be mistaken in their identity. Beaufort's Prince, we may remark, is a dog not easily forgotten, as he has certain peculiarities of formation that to any one familiar with dogs become fixed in the memory.

After several postponements the case finally came for trial before Judge Forsythe in the Municipal Court of the City of Boston, on May 25. Hosea Kingman and James E. Leach appeared for the plaintiff and Henry E. Ruggles, of Franklin, and Charles H. Innes, of Boston, for Dr. Lougest.

Mr. Fallon testified that his dog, named Carlo, was stolen some time about Thanksgiving in 1893, and that he received the dog from his son, who is now dead. Eight witnesses from his town also testified most positively that the dog Carlo, owned by Mr. Fallon, was the dog in controversy. They all

testified to his demonstrations of affection upon seeing his master, and the fact that he recognized a colt and a baby with whom he had grown up.

Dr. Lougest put in the deposition of Mr. Winchell, of Fairhaven, who swore that he raised the dog, a litter brother to Black Prince, and that he sold him to Mr. Fraleigh sometime in November, 1890. He testified that he saw the dog in question at the New York show in 1893 and 1894.

The deposition of Mr. Fraleigh was also read. Mr. Fraleigh is the secretary of the United States Life Insurance Co., of New York, and substantiated Mr. Winchell's statement, and said that he had sold him to Mr. Mead, of Lake Waccabuc, N. Y.

Mr. Mead, who is secretary of the American Mastiff Club, came on from New York to the trial, and positively identified the dog as the one which he received from Mr. Fraleigh, which had not been out of his possession from August, 1893, until he delivered him to Dr. Lougest in February, 1894.

Mr. G. W. Glazier, of Salem, Mass., also swore to peculiarities of gait, back and ear, which he had never seen in any other dog, and that he, too, had seen him at the Westminster Kennel Club show in 1893 and 1894.

C. Walter Lougest, Dr. Lougest himself, and his kennel man, Simon Jeffs, also testified to the same effect.

The case lasted until Monday, the 28th. All the witnesses for the defense swore that one of the distinctive peculiarities of the dog by which they knew him was the fact that the dog's testicles had never come down from birth. Fallon's witnesses had previously testified that the testicles of Carlo when lost were the same as any dog's. So in order to make out a case the plaintiff had to show that his dog had been castrated since he was stolen in November, '93.

Dr. H. Clay Glover was summoned from New York and said he had examined the dog at various shows in 1892, and in the ante-room a few minutes before the trial. He thought that the testicles had never come down, but were still in the abdomen of the dog, that there would be a scar in case of castration, and that he found none. Dr. Stewart testified to the same effect.

Drs. Blake, Blodgett and Stickney, of Harvard University, for the plaintiff testified that they had given the dog an examination and found a slight scar on the scrotum, and could feel the stump of where the testicles had been, and were hence of the opinion that the dog had been castrated.

After argument, the court said, "I will not go over the testimony. The plaintiff is a much mistaken man; although the mistake is undoubtedly honest."

The case is one of the most unique and peculiar ever tried in Massachusetts. On the one side was the testimony of eight witnesses, all of whom believed what they testified to; on the other was the testimony of experts in this particular breed, who had seen the dog very infrequently. The judge, being somewhat of a horseman, understood this, perhaps, much better than an ordinary jury. Of course, there can be no doubt as to the identity of the dog, and it is probable that a case like this has seldom arisen before.

The plaintiff appealed from the decision to the Superior Court, where there will be a trial by jury sometime, but probably not within a year. He is very determined in the matter, as the dog, which he thinks this one to be, was given to him by a dead son, and is ready to spend all the money he has to win the case.

As his expert testimony cost him \$150, it will be readily seen that he is in earnest and that the suit promises to be an expensive one.

Mr. Charles H. Inness further informs us that under the laws of Massachusetts the plaintiff in a case of replevin, having given a bond in double the value of the goods keeps such goods until the matter is finally decided.

#### Another Cocker Question.

ANOTHER spaniel controversy has just been ventilated, but this one, unlike the fanciers' controversy in our kennel papers, has at last been settled. Dr. Battey when living in West Twenty-seventh, New York, lost his cocker spaniel about a year ago and could get no trace of the dog. About a month since he removed to Thirty-fourth street and recently visiting the former street was surprised to meet his dog, who gave every evidence of affection. The doctor laid claim to the dog, but this was disputed by John Streep, who called the dog and asserted he had raised him. When Prince was a puppy Dr. Battey had removed a cancer from his month and he showed Streep the scar, but the latter refused to accept this as evidence. Dr. Battey summoned Mr. Streep before the police court, but the case was thrown out because Dr. Battey would not make a criminal charge and therefore the judge could not decide as to the ownership of the dog. Dr. Battey then brought an action in the civil court and some fifty or sixty witnesses were examined, one or two being brought from Pittsburgh, Pa., to testify. The trial lasted three days and was finally brought to a close last week, but Justice Martin reserved his decision until last Saturday, giving the dog to Dr. Battey. It seems the dog was given to Dr. Battey by Prof. Cromwell nearly three years ago and he raised him. When a professional man will give up valuable time and spend money in the recovery of his pet it goes far to offset the opinion of those misguided mortals who can see no use in a dog, anyway.

#### That "Mossback Robber" Rule.

*Editor Forest and Stream:*

I notice in your last issue Mr. P. T. Madison informs the public of the U. S. Field Trials Club's having eliminated from its rules that one (which he pleases to call) "old mossback robber," of prohibiting bitches in heat from running in field trials. I fail to comprehend the reason and good judgment in this action, and think the U. S. F. T. Club owe an explanation through the press to all intending competitors as to how the judges will handle their dogs to bring about a fair decision if a case in point should come before them.

For instance, supposing one of the two best dogs in a stake is a bitch in heat and the other a dog who has been used a good deal at stud. Under Rule 9 these two dogs must run together and in Rule 14 it is stated, "An opponent's dog must not be interfered with or excited." Every handler will agree with me that the majority of dogs would follow and worry after that bitch in heat in preference to hunting. I can plainly see many other complications too numerous to mention here, and with it never ending kicking, so write this that owners and my brother handlers may know how our dogs would be judged in such a case. C. E. BUCKLE.

CHARLOTTESVILLE, Va., May 28.

At the annual meeting of the Pacific Kennel Club the following officers were elected: E. W. Briggs, President; E. H. Wakeman, First Vice-President; F. S. Butler, Second Vice-President; H. W. Orcar, Secretary, and C. A. Haight, Treasurer. It is the intention of the officers to hold a dog show next spring when there will be no Mid-Winter Fair to interfere with the attendance.

The entries by breeds at the Oakland (Cal.) dog show up to May 23, the date of closing, are as follows: Mastiffs 4, St. Bernards 19, great Danes 6, American foxhounds 9, English foxhounds 1, greyhounds 9, Newfoundlands 6, Chesapeake Bay, Irish water spaniels 3, field spaniels 5, cocker spaniels 20, Japanese spaniels 3, pugs 3, pointers 30, English setters 14, Irish setters 15, Gordon setters 6, collies 11, Italian greyhounds 2, dachshunds 1, poodles 1, bulldogs 1, bull-terriers 5, black and tan terriers 2, toys 1, fox-terriers 21, miscellaneous 2, total, 192. It is expected that the late mails will bring a few more. The show opened May 30 in Mills Tabernacle and Mr. A. C. Waddell was to judge all classes.

### Flaps from the Beaver's Tail.

TORONTO, Canada.—Mr. L. A. Klein of Black Lake, Que., a dachshund enthusiast, and who now has a brace of imported dogs of this breed in his kennel, is getting out a new dog and also a brace of Danes from Germany. Spratts will likely have the looking after of them.

Mr. E. M. Williams, the owner of that grand Skye terrier champion Old Burgundy, has lately arrived from England on a visit and is at present in Manitoba. Mr. Williams brought three Skyes over with him—Buccaneer, a well known winner, and two brood bitches, both winners, and one supposed to be in pup to Burgundy. Buccaneer, from his photo, seems to be a good one, low set with beautiful prick ears.

My British Columbia correspondent sends me several news items from which I gather that the doggy population in that Province goes on increasing. Mr. J. B. Carmichael of Victoria has bought a brace of collies, dog and bitch, by champion Christopher out of imported Wellesbourne Mabel, by champion Edgbaston Fox out of Edgbaston Bess. Both are sable and white and the pick of the litter. They were bred by Mr. A. Bertling, Athens, Ga., and it may be interesting to note that the charges from there to Victoria were \$46 on the two dogs.

Mr. Harvey Wright, of the same city, has a weakness for toys, and his latest addition is a brace of Italian greyhounds. The bitch Lorna is by the well known Byron (A. 25,265), out of Tena (A. 13,817), while the dog is a full brother of Byron's.

Mr. Watson's recent purchase, the English setter bitch Lady Howard, has whelped a nice litter of eight, three dogs, to Brighton Rod, a dog of the best breeding. Another recent litter of the same breed is that of Addie Gladstone, thirteen, of which nine are living. They are by Hickory Rod. As my correspondent says, "these litters, if raised, should place Victoria English setters in the front rank on this coast."

Beverwyck Rasp and Beverwyck Wasp are the latest at the Kingston Kennels, Mr. C. H. Corbett's. I did not know he was addicted that way. Wasp is by B. Punster out of Princess, and Rasp by B. Rasper out of B. Becky; so it will be seen that both are of the bluest of the blue blooded.

Earl of Carrick, a sable and white son of Scotland's Star and Lass of Arden, has been sold to Mr. F. W. C. Whyte of Anaconda, Mont., by his breeder, Mr. John A. Turner, of Calgary, N. W. T.

The following from Mr. Hedley Chapman, the breeder of the St. Bernard Princess Florence, who is now in British Columbia, will be of value: "I noticed you recommended plucks for dogs' food. If not presuming too much, I would like to say this is a very bad food for full grown dogs. After a morning run, a light breakfast is good, such as dog biscuits (better dry, if they will eat them so); and then in the evening bullocks' or sheep heads boiled and mixed with stale bread that has been soaked in water during the day, then squeezed out dry as possible. This, with meat cut up and well mixed together, is a good feed for dogs."

Writing of distemper he says: "The best thing for any person rearing puppies or keeping dogs not over the distemper, is to always keep a box of Rackham's distemper pills in the house. Give when distemper first sets in. I have never known them fail. Thad Lady Ida (dam of Princess Florence) with seven pups down at same time, and lost none."

Anything referring to Princess Florence, especially when written by her breeder, is interesting, and on such a subject as comparative weights, Mr. Chapman says: "I have referred to my stud book and find that when seven months old Princess Florence weighed 138lbs. In rearing, I used to weigh her every week, and I find she put on the greatest weight between 3½ and 6½ months. H. B. DONOVAN."

### Field Dogs—Their Present and Future.

Editor Forest and Stream:

The remarks of your thoroughly posted and always entertaining correspondent, B. Waters, in FOREST AND STREAM of May 19, have the ring of the true metal ninety-nine-one-hundredth fine. They form the keynote to the situation and clarionlike should sound forth to the vast army of American sportsmen the vital needs of the hour, and let us hope will prove to be the beginning of a speedy death to any movement which shall in the future detract a single iota from the practical education and field qualities of our sporting dogs. Setters and pointers are preëminently the practical outdoor companions for the sportsman, and any dividing line between the qualifications necessary to succeed in private shooting or in public trials can only be defined at the expense of many valuable qualities which make the possession of a thoroughly intelligent and well-educated shooting dog a thing of beauty and a joy forever. It is from such well-informed men of practical ideas as Mr. Waters that the rank and file of American sportsmen should look for live signs of the times, and when a sage of his acknowledged worth flings to the breeze a danger signal, it is time for the laymen to heed the warning ere it is too late. Few sportsmen would think it advisable or worth their while to take a dog in the field who could simply outfoot any canine rival. Bird sense, nose, staunchness, retrieving and perfect obedience are far more requisite to a successful hunting trip, and should invariably be credited at their proper value. If the sportsman is to out out all the work, why take the dog? In localities other than the great breeding grounds of the South and West, especially is it essential that a field trial and a shooting dog should be identical, for the conditions are such as to make the possession of two sets of dogs—one to look at and the other to work—decidedly foolish.

If notions foreign to the conditions which we find in localities more or less distant from the natural game centers are to be imported, confine them, I pray, to portions of the country where they will be appreciated, but do not inflict such disaster in localities where the success of a day's hunt depends solely upon the intelligence and training of one's canine companion and the pleasure of the day requires that the dog should be thoroughly able to perform its duty without the artificial assistance which seems to be so necessary to its existence in modern field trials. From this modern work here in New England, or for even advertising it, may we be delivered. The talk about mole diggers, plug-shooting dogs, meat hunters and the like, is not admissible, for there are no practical sportsmen but would prefer one of these much maligned canines as a companion in a day's hunt to the much lauded, high class—save the mark—field trial winners whose nose rarely keeps pace with their speed. Stop one moment and tell me where we are going to get our shooting dogs if all should breed from the field trial dog, for many are so bred now that it is impossible to train them without breaking them down entirely, and that is the reason why they had to drop retrieving. They would not stand fine training and retain their cheerfulness and dash. What does any practical sportsman want of such a dog? Let us have the dog that is of some use by all means. Let us have the dog that can, unaided by voice or whistle, quarter his ground, work out covers or open, instantly scent the game bird, approach cautiously and stand at a safe distance—a joyous picture for artist or sportsman—until, "the flush," then

the shot, and when ordered to fetch, deliver the prize into the sportsman's hand, a fitting final to a glorious piece of work. Aye, let us have this dog for our companion at home or afield. Let his past deeds speak for him out of season and his daily work tell its own beautiful story. Let this kind of a dog shine in public as well as in private. Hide not his great light under a bushel; let it illumine the canine atmosphere until a dog of well nigh perfect attainments is universally required, and as a shooting dog wins the money in public competition. No more of the dog that has simply style, range and speed. Give us the canine mechanic that has thoroughly learned his trade for private or public shooting. Given such a dog we must be happy. E. K. SPERRY.

NEW HAVEN, Conn.

### Eastern Field Trial Club's Derby Entries.

The entries for the Derby closed May 15, with 32 English setters and 6 pointers. All whelped in 1893.

#### ENGLISH SETTERS.

JOYFUL—W. B. Meares, Jr.'s orange and white dog (Dion C.—Natalie), April.  
GLADNESS—W. B. Meares, Jr.'s black and white bitch (Dion C.—Natalie), April.  
BLENDON DOG—Tway & Levering's black and white bitch (Chula Light—Dot Noble), May.  
LADY MILDRED—Blue Ridge Kennels' black, white and tan bitch (Antonio—Ruby's Girl), May.  
TITCH BEGG—Blue Ridge Kennels' black, white and tan dog (Antonio—Ruby's Girl), May.  
NELLIE FOX—Blue Ridge Kennels' black, white and tan bitch (Antonio—Can Can), February.  
GENEVIEVE S.—Blue Ridge Kennels' black, white and tan bitch (Antonio—Countess Rush), May.  
TONY BOY—Blue Ridge Kennels' black, white and tan dog (Antonio—Laundress), January.  
DIOMED—F. R. Hitchcock's black, white and tan dog (Count Gladstone—Tory Della), March.  
DELL—F. R. Hitchcock's black, white and tan bitch (Count Gladstone—Tory Della), March.  
DOTLET—F. R. Hitchcock's black, white and tan bitch (Count Gladstone—Tory Della), March.  
BELLE—F. R. Hitchcock's black, white and tan bitch (Count Gladstone—Tory Antoinette), May.  
LUNA—F. R. Hitchcock's black, white and tan bitch (Roi d'Or—Tory Diamond), May.  
LAURA—F. R. Hitchcock's black, white and tan bitch (Roi d'Or—Tory Diamond), May.  
DASHING NOVICE II.—Manchester Kennel Co.'s black and white bitch (Gladstone's Boy—Queen Novice), March.  
RUBY'S PEARL—Manchester Kennel Co.'s black, white and tan bitch (Antonio—Ruby's Girl II.), August.  
RILEY NOBLE—L. D. Hargrave's lemon and white dog (Antonio—Buena Vista), April.  
ANTOVISTA—H. H. Hargrave's lemon and white bitch (Antonio—Buena Vista), April.  
LORRAINE—P. Lorillard, Jr.'s black, white and tan bitch (Eugene T.—Lora), July.  
EUGENIE—P. Lorillard, Jr.'s black, white and tan bitch (Eugene T.—Delle), April.  
ADVERSITY—P. Lorillard, Jr.'s black, white and tan bitch (Eugene T.—Delle), April.  
PALOMA—P. Lorillard, Jr.'s black, white and tan bitch (Eugene T.—Lora), February.  
ZERALDA—P. Lorillard, Jr.'s black, white and tan bitch (Eugene T.—Lora), February.  
SHAD—P. Lorillard, Jr.'s black, white and tan dog (Eugene T.—Lora), February.  
MARK BELTON—H. G. Sinnett's black, white and tan dog (Edgemark—Nellie Belton), May.  
DIXIE'S FLAG—Norvin T. Harris's black, white and tan dog (Wun Lung—White Wings), February.  
ARMINELL—J. H. Winslow's black and white bitch (Duke of Buckingham—Belle), May.  
PRINCESS EULALIE—J. H. Winslow's black, white and tan bitch (Rowdy Rod—Belle of Kentucky), February.  
CYNOSTHE—Avent & Thayer Kennels' black, white and tan bitch (Roderigo—Norah II.), May.  
CLEMENTINA—Avent & Thayer Kennels' black, white and tan bitch (Roderigo—Norah II.), May.  
COLUMBINE—Avent & Thayer Kennels' black, white and tan bitch (Roderigo—Norah II.), May.  
ROMANCE—Avent & Thayer Kennels' black, white and tan bitch (Roderigo—Norah II.), May.

#### POINTERS.

TIPPO—Charlottesville F. T. Kennels' liver and white dog (Rip Rap—Monterey), March.  
DELHI—Charlottesville F. T. Kennels' liver and white dog (Rip Rap—Queen II.), April.  
SHAH—Charlottesville F. T. Kennels' liver and white bitch (Rip Rap—Dolly), May.  
SEPOY—Charlottesville F. T. Kennels' liver and white dog (Hob Nob—Diana), April.  
KIT'S LAD—D. G. Rowland's liver and white bitch (Lad of Rush—Devonshire Jill), August.  
HEMPSTEAD DON—Hempstead Farm Kennels' white and liver dog (Sandford Druid—Merryls), June 15.

### Has Any One Lost a Gordon?

Editor Forest and Stream:

If any of FOREST AND STREAM's readers in Boston know of any one having lost a Gordon setter, I shall be pleased to correspond with him regarding a dog that, in my opinion, was stolen in Boston. The present possessor cannot afford to own such an animal; he says he paid \$15 for him, but such dogs as this one cannot be had for that money. HENRY HOUSTON.

DOVER, N. H., May 31.

### DOG CHAT.

At a special meeting of the New England Kennel Club, held May 18, it was voted to have the club rooms open to the public throughout the entire year, and have somebody in attendance who could answer questions, keep a record of breeders, and supply general or specific information on doggy matters. The object of this is to make the club not only a bench show club but also a bureau of information, where not only club members can get news but the public can receive such information as they desire. It is hoped that this will place the club on a broader basis and do more for the dog in New England than as it now exists. In view of the above action, the Board of Governors take pleasure in inviting those interested in the dog to call when in Boston at the club rooms, 125 Tremont street, and avail themselves of the privileges offered. The rooms will be open during the summer months from 10 to 12 A. M. and from 1 to 3:30 P. M. every day except Saturday, on that day the hours will be from 10 A. M. until 1 P. M. This is a commendable move on the part of the club and should tend to increase the interest taken in dogs and dog shows by New England breeders and owners. Exclusive news of such action was given two weeks since in FOREST AND STREAM.

As an instance of the large number of dog shows held in different parts of England at the same time, we notice the reports of no less than thirteen shows held between May 12 and 16, inclusive, in the last issues of the *Stock-Keeper* and *British Fancier*.

In a postscript to a chatty letter, Mr. Bradford S. Turpin tells us of one of those "touches of nature that make the whole world kin." "I meant to have mentioned an incident

of Boston's last big fire that I happened to see. While the fire was at its height I found myself inside the fire lines—just how I got there I don't know. Scores of tenement houses were ablaze, and as I stood watching the scene, I noticed two ragged urchins boosting a third into a first story window, thick with smoke. The little chap disappeared for a moment and then burst through the smoke holding in his arms a big yellow pup more dead than alive. When the three found their pet was still in the land of the living, they threw their hats in the air and gave a cheer that rose above the roar of the fire. Their joy was one bright spot in that terrible scene. They lugged off the pup and made no effort to save anything else."

If you do own a horse or a dog that does not argue that you can knock the life out of it should it not please you—at least not in Perth Amboy, N. J., where President Kitchell of the S. P. C. A. holds sway. Mat Stecker owned a horse; the horse balked and was cruelly beaten by Stecker. Agent Tyrell arrested him and his defense was that he thought he could do as he liked with his own. President Kitchell, who is an active and prominent member of the Spaniel Club, set him right on this score by saying, "No, you can't. You have no right to abuse any animal, even if you own it. We are organized to show you that you cannot." Stecker paid \$10 for his beating. This will probably teach him a little horse sense.

Here is sound advice by a Scottish terrier judge, Mr. J. N. Reynaud, who, in writing his report on these terriers has this to say in the *English Kennel Gazette* in regard to trimming for the show ring: "It might be easier to get up a code on the best way to trim a dog, and so let all men stand on the same level. There were several dogs before me here that I feel sure in the hands of some men would have been very much further up, but they were shown so rough that nearly all their good points were hidden under a mass of dead hair. I would say, let all men prepare their dogs for exhibition to the best of their ability (as they do at present), but come down very sharply on the 'faker,' the man who would out the sinews of a gaily carried tail, dye white marks on the chest and feet, or in any way try and cover up what is a physical defect."

New York sportsmen have always felt the need of more nearby handlers who could train their dogs without taking them South or far from home, so that they could personally satisfy themselves from time to time as to what progress their dogs are making in their education. The Netherwood Farm Kennels, of Plainfield, N. J., seem to have just such a place, and, as their announcement in our business columns suggests, are prepared to train dogs at home or down South. They are now posting their land to keep shooters off the summer woodcock ground. Mr. Tallman has located some young birds, also a covey of ruffed grouse within ten minutes' walk of the kennels. He has also just engaged a thoroughly good trainer, who knows every foot of ground in that section. Mr. Sylvester J. Kiernan, of Elizabeth, N. J., after seeing the place, immediately placed his four English setters with the kennel. Their land extends two and a half miles along the foot of the mountain and nearly all of it is good woodcock ground, and back of the mountain the best partridge ground in that part of the country. With such a well-known trainer as Mr. Tallman at the helm, this establishment should prove of great benefit to sportsmen in the vicinity of New York.

Another case of cruelty to dogs is reported from Babylon, L. I. Mr. W. A. Overton, of New York, resides during the summer at Babylon. He is said to own a number of valuable dogs, among which is a mastiff called Rip, by Bismark. On Thursday last the dog left the house and returned in an hour horribly bruised and cut, one slash down the thigh being several inches long and exposing the bone. Mr. Overton is naturally very angry and offers a reward of \$5 for any information that may lead to the detection of the person who injured the dog. At the same time there are always two sides to a case, and in future Mr. Overton would do well to read the paragraph we penned in "Dog Chat" last week and see that his dogs are kept within bounds.

Letters from "Wrong Party" and H. T. Thurber are deferred this week.

The case of Fallon vs. Lougest, partially settled in favor of Dr. Lougest at the recent trial, particulars of which we publish in another column, is a most interesting one, and the final result will be looked forward to with impatience. Although the decision is in favor of Dr. Lougest, Mr. Fallon has appealed, and the dog, we understand, remains with him until the final settlement. This is peculiarly hard on Dr. Lougest, as, through no fault of his he loses the services of the dog and the opportunity to show him. Should the verdict finally be given in the Doctor's favor, Mr. Fallon will very probably find a suit for damages on his hands.

The question as to whether a cocker spaniel should be elevated is a "weighty" subject with some of our breeders, but we fail to see what good the cocker spaniel fancy is to derive from the controversy that is now raging in another journal where the "rattlers" have full scope. As proof of this it is amusing to notice that in the reexaminative session alluded to neither of the principal combatants owns a spaniel, or shows a dog of that breed. It is a good sign that the real spaniel men are laying low and taking no part in the squabble, which reminds one very much of a stray worm in a hen yard—the worm, &c., the cocker, is soon lost sight of in the ruction that follows.

The secretary of the English Spaniel Club, Mr. John S. Cowell, is evidently preparing to give Mr. Wilmerding a fraternal welcome when he reaches the other side. He writes the papers as follows: "Just a line to give you a whisper from the other side of the 'pond.' Mr. A. Clinton Wilmerding, the president of the American Spaniel Club, who has always held out the olive branch to our club and kept me in touch with the spaniel world in America, sails on the 6th June in the Britannic for England, and hopes to meet most of our principal exhibitors and to inspect many of our kennels. I have arranged to meet him on his arrival in town, and shall communicate with the principal members of our club to see if, in some way, we can mark his visit to this country, and send him back to New York full of good impressions of our English Spaniel Club."

Field trial men fully expected that this year would see an improvement in the number of entries in the Eastern Derby. Instead of that there is a falling off once more. What is the reason? The more popular system of having separate stakes for pointers and setters would seem to be a way out of the difficulty and should be tried in the All-Age Stake. Last year the entries were 36 English setters, 8 pointers and 1 Irish setter.

Mr. F. S. Eaton, of Springfield, Mass., bred his bitch Jean of Beaufort to Mr. E. O. Damon's noted Derby winner Stride-away on May 22.

Mr. W. Stewart Diffenderfer, late secretary of the Maryland Kennel Club, must have a dog of some sort to provide for, and now that he has relieved himself of his St. Bernard's fancy turns to an English setter, and he has just imported a well bred one from Mr. Llewellyn's kennels. This is Count Beaufort, which arrived at Baltimore on the steamer Rossmore last Tuesday morning. This dog is indeed well

Cadet, entered in third class, sprung her hollow mast on the way to the race and was unable to start. The judges were Com. A. W. Torrey and Messrs. T. P. Grant and C. E. Burkmar.

other race is certain to take place. Cash prizes, first, second and third, were also given.

The double celebration of the Pavonia Y. C. included a formal opening of the Atlantic Highlands club house and a race at Jersey City, the latter event attracting but few of the members. Ten yachts started over a course around Liberty Island and Robbins Reef Buoy, but only five finished, the wind being quite fresh. Win or Lose, a new cabin cat owned by F. M. Randall, beat Waterlily and Annie; and in the open cat class Emma K. beat Qui Vive. The day at the Atlantic Highlands was particularly pleasant.

The American Y. C. celebrated the day by a formal hoisting of the colors in the afternoon, followed by a reception in the evening at which a number of the members were present. In the harbor were Golden Rod, Tille, Hirondeelle and Viola.

The Brooklyn Y. C. flew started the flag in the morning, after which a review and inspection of the fleet took place, followed by a sail down the Bay in which Signal, Iroquois, Golden Hope, Vixen, Gracie and other yachts took part.

The Hempstead Bay Y. C. sailed its first race on Memorial Day, the wind being very strong. In first class Henrietta won, with Brooklyn second and Amerique third. In second class Unit won, with Tomboy second and Mystery third. Mr. Colyer, of Freeport, one of Tomboy's crew, was knocked overboard by the boom, and only escaped drowning by the prompt and skillful action of those on board, in maneuvering the yacht and picking her up as she floated. He was unconscious when taken from the water, but soon recovered.

The Jersey City Y. C. opened the season with a review and sail among the yachts being Bessie, Com. Van Horne, Forsythe, Millie, Echo, Eureka, Modesty, Naomi and Eleanor.

The Oceanic Y. C. held a reception at the club house, and the Canarsie Jamaica Bay, Staten Island and other clubs about New York turned out in force for short sails and appropriate ceremonies ashore.

### Brooklyn Y. C. Annual Regatta.

BENSONBURST—NEW YORK BAY.

The first race of the June regatta week, which on account of the tide comes earlier than usual this year, was that of the Brooklyn Y. C. whose club station is at the head of Gravesend Bay. The club has arranged an almost unlimited number of courses between the Narrows and the Scotland Lightship, from which the following were selected for those classes which filled:

OPEN BOATS.

Mainsail.—Class A, 21ft. l.w.l. and under—to stakeboat south of Fort Lafayette, to black bell buoy, West End, and return to starting line; length of course, 9 miles. Class B, over 21ft. to 25ft. l.w.l.—to stakeboat south of Fort Lafayette, to black buoy No. 8, and return to starting line; length of course, 11 miles.

Jib and Mainsail.—Class 1, 21ft. l.w.l. and under—to stakeboat south of Fort Lafayette, to black buoy No. 7, and return to starting line; length of course, 11 miles. Class 2, over 21ft. l.w.l.—to stakeboat south of Fort Lafayette, to white buoy near C No. 5, and return to starting line; length of course, 15 miles.

CABIN YACHTS.

Mainsail.—Class D, 24ft. l.w.l. and under—to Orchard Shoal Light, to red bell buoy, Swash Channel, and return to starting line; length of course, 15 miles. Class E, over 24ft. l.w.l.—to Orchard Shoal Light, to red buoy C No. 4, and return to starting line; length of course, 17 miles.

Sloops, Outters and Yawls.—25ft. class (25ft. l.w.l. and under)—to Orchard Shoal Light, to red bell buoy, Swash Channel, and return to starting line; length of course, 15 miles; 30ft. class (over 25ft. to 30ft. l.w.l.) to Orchard Shoal Light, to red buoy C No. 4, and return to starting line; length of course, 17 miles; 35ft. class (over 30ft. to 36ft. l.w.l.) to Orchard Shoal Light, to red buoy No. 10, and return to starting line; length of course, 19 miles.

Prizes were offered for all classes from the 70ft. schooners downward, but the largest yacht at the line was the 35-footer Tigress. The races ran up to nearly 26, of which 26 crossed the line, a very fair number for the first race of the season. The starters were:

CLASS A, MAINSAIL, 9 MILES.

	Length.	Rating.
Edda D. R. W. Rummell, Brooklyn	21.04	19.01
Nettie, O. M. Schwerdfeffer, Gravesend Bay	18.06	18.03
Paul and Stella, J. A. Riley, Brooklyn	16.08	17.01
Folly, Chas. J. Earl, Brooklyn	16.00	16.04

CLASS B, MAINSAIL, 11 MILES.

Lester, H. M. Furgurson, Gravesend Bay	24.06	Not meas.
----------------------------------------	-------	-----------

CLASS C, CABIN MAINSAIL, 15 MILES.

Tabitha, L. Smith, Brooklyn	21.05	23.03
Win or Lose, F. M. Randall, Pavonia	20.00	23.01
Juniauta, O. F. Larzelere, Brooklyn	22.04	23.02
Kittie, Hazen Morse, New Rochelle	20.00	Not meas.

CLASS D, JIB AND MAINSAIL, 17 MILES.

Mary, W. B. Ellsworth, Rayonne	25.04	Not meas.
Almira, H. W. Hanan, Indian Harbor	25.04	28.07

CLASS E, JIB AND MAINSAIL, 19 MILES.

Exile, F. M. Randall, Atlantic	20.09	25.06
Faustina, R. C. Hopkins, Brooklyn	24.05	25.00
Lizzie, S. O'Brien, Gravesend Bay	20.00	Not meas.

CLASS F, SLOOPS, 17 MILES.

Golden Hope, E. Prentiss, Brooklyn	24.09	29.04
Christine, E. R. Baker, New Jersey	24.06	29.00
Nomad, W. B. Groatage, Brooklyn	23.03	26.07
Adele, C. H. Humphreys, Brooklyn	22.09	24.11
Arrow, H. W. Brett, Gravesend Bay	25.00	24.06
Vida, W. Schumacher, Brooklyn	21.03	23.09

CLASS G, SLOOPS, 19 MILES.

Forsythe, Alex. Roe, Pavonia	23.06	32.06
Mizpah, Chas. Solheim, Brooklyn	26.00	27.06
Millie, C. H. Benson, Pavonia	26.02	Not meas.

CLASS H, SLOOPS, 21 MILES.

Neika, E. H. Converse, Brooklyn	35.10	39.05
Almira, J. A. Constant, Brooklyn	30.10	35.04
Theresa, W. J. J. Atty, Brooklyn	25.00	Not meas.

The racing was so close in a number of classes as to make some exciting racing, notably in the 70ft. cabin cat class, where Mary was pitted against Almira, both well known and successful boats; in the smaller cabin cat class, where Tabitha, a smart Capet of the older type, was matched with two new boats, Kittie and Win or Lose. The new boats are quite similar in general appearance, though Kittie was built by T. R. Webb, of New Rochelle, while Win or Lose was built at Communipaw by F. M. Randall, of the Pavonia Y. C. her owner. They are unlike the ordinary Capet in having a bow which rounds out well over the water, instead of being nearly plumb, the counter is carried out better and is not so wide and deep, while the sheer line is less crook, the foreboard being, if anything, a little greater amidships, and decidedly lower at the bow. Each has a long cabin trapezoid, and the rigging is so arranged that it was impossible to gauge her by the larger boats. The principal boat in the 25ft. sloop class was Golden Hope, built last year, with long fore and after overhangs.

The morning was warm but cloudy, with a fresh breeze about S.W., kicking up the whites in the Narrows and on across to Raritan Bay, where the first leg of the principal courses lay, from the start to the new lighthouse on Old Orchard Shoal. The judges' tug, Henry Hoehn, and the guests' steamer, were at the start by 11 o'clock, but the yachts had not arrived, some working out from the anchorage up the Bay, while new arrivals came down through the Narrows. Special signals had been prepared by the committee in case a postponement should be necessary, but they were not needed or used, the fleet gradually gathered about the judge's boat, and just before 1 P. M. the first signal was given.

The first leg of the wind many started to turn in one or even two reefs, the principal courses being to windward on the first leg. Mary tied in two reefs, one being a very small one, and Almira took in a first reef of ordinary size. The first away was Tigress, sailed by Mr. Edward Fish and making a good start. After she was well clear of the line there came quite a bunch of smaller boats, Win or Lose being the most conspicuous, with a few larger boats, near the rear, and the fleet was fairly well together. Her classmates Kittie and Tabitha were dodging each other for the weather berth some distance from the line and crossed well astern of her. Mary and Almira were also chasing each other, coming for the line together with Almira a little in the lead and Mary on her weather quarter. As they neared the line Mary, for some unknown reason, luffed up and then jibed around, Almira meanwhile continuing over the line. This maneuver cost Mary some seconds, as the hand-cup whistle blew before she could clear the line. Exile and Faustina came for the line in company, Faustina to windward, but as soon as they straightened out Exile slid through the other's lee and out ahead. Faustina tacked and Exile followed, coming out well on the other's weather, and the two went off for their first mark at Fort Lafayette.

The second run away from her two competitors, one of them, Almira, giving up early to the race. Almira and Mary each shook out a reef, Mary regaining the lost ground of the start and crossing Almira's bows when off the lower island. The little Win or Lose was hanging on to them, but got into a bad berth just on Almira's lee quarter, where she was blanketed for a long time. The two big cats

now came on starboard tack for a long beat to the Old Orchard Light, Almira to windward, but astern of Mary. The latter footed fast, but failed to hold on with Almira, she pointing high and holding a good wind, while Mary fell off, finally making a long tack up for the mark. Almira made a couple of short hitches, turning just ahead of her rival. Win or Lose had held the leaders well, and was far ahead of her class. Tigress was first to turn, setting working topsail and standing off for Buoy 10. The times at the turn were: Tigress 1:32:10, Neika 2:06:50, Almira 2:13:00, Mary 2:14:10, Win or Lose 2:15:50, Tabitha 2:20:00.

Running in, Mary failed to catch Almira, but hung close enough to her to break her wind, making a pretty race. At the turn the sky clouded for a time and a few drops of rain fell, but the breeze held, bringing the fleet home in good time. The official times were:

	CLASS A—MAINSAIL.	Finish.	Elapsed.	Corrected.
Edda D.	1 02 24	2 35 10	1 32 46	1 32 46
Nettie	1 03 03	Did not finish.		
Paul and Stella	1 01 14	2 44 25	1 43 11	1 40 08
Folly	1 01 09	Did not finish.		

	CLASS B—MAINSAIL.	Finish.	Elapsed.	Corrected.
Lester	1 00 45	2 50 10	1 49 25	1 49 25

	CLASS D—CABIN MAINSAIL.	Finish.	Elapsed.	Corrected.
Tabitha	1 20 13	3 50 30	3 07 35	3 07 35
Win or Lose	1 20 13	3 50 30	3 07 17	2 59 59

	CLASS E—CABIN, MAINSAIL.	Finish.	Elapsed.	Corrected.
Juniauta	1 22 35	Did not finish.		
Kittie	1 21 45	3 59 31	3 07 36	Not meas.

	CLASS F—JIB AND MAINSAIL.	Finish.	Elapsed.	Corrected.
Almira	1 24 32	3 46 25	2 51 53	Not meas.
Mary	1 25 00	3 47 44	2 53 44	Not meas.

	CLASS G—JIB AND MAINSAIL.	Finish.	Elapsed.	Corrected.
Exile	1 00 35	2 32 30	1 26 24	1 26 24
Faustina	1 00 25	Did not finish.		
Lizzie	1 02 48	3 00 40	1 57 57	Not meas.

	CLASS H—SLOOPS.	Finish.	Elapsed.	Corrected.
Golden Hope	1 25 48	4 07 22	3 14 34	3 14 34
Christine	1 25 50	Did not finish.		
Nomad	1 25 15	Did not finish.		
Adele	1 25 16	Did not finish.		
Arrow	1 25 20	Did not finish.		
Vida	1 25 11	Did not finish.		

	CLASS I—SLOOPS.	Finish.	Elapsed.	Corrected.
Forsythe	1 25 07	4 14 55	3 22 48	3 22 48
Mizpah	1 25 30	Did not finish.		
Millie	1 25 14	Did not finish.		

	CLASS J—SLOOPS.	Finish.	Elapsed.	Corrected.
Neika	1 24 44	3 45 15	3 01 00	3 01 00
Almira	1 23 54	Did not finish.		
Tigress	1 24 52	3 40 10	2 52 18	Not meas.

The winners are: Class A, Edda D.; class B, Lester; class D, Win or Lose; class E, Tigress; class F, Tigress. Golden Hope distanced her class so badly that she gave up, though there was nothing in the weather to turn them back. Almira probably wins from Mary, but neither was measured. In rounding up to the markboat for the Bay Ridge with a reefed sail and an oar over the quarter to repair in time for the morrow's race.

The prizes were: Class A, \$15; B, \$20; D, \$20; E, \$25; class No. 1, \$20; Sloops, outters and yawls—25ft. class, \$30; 30ft., \$35; 35ft., \$30. The regatta committee was Louis Wunder, chairman; Fred W. Bobbett and Frank L. Townsend.

### The Larchmont 21-Footers.

The Larchmont Y. C. has issued the following circular relating to the new 21ft. class. The Seawanhaka Y. C. has also scheduled two races for the boats, and other neighboring clubs are also making dates for them:

"It is the intention of the club to hold a number of races for this class during the season of 1894. For each race the club will give an appropriate record prize to the winning boat, and a like prize to the second boat in each event in which four or more boats start. Com. Seymour L. Husted, Jr., offers a valuable silver cup, which will be awarded at the end of the season to the yacht which has won the greatest number of first prizes. The Larchmont Y. C. offers a similar cup, to be awarded at the end of the season to the yacht which has won the greatest number of points in such races, the points counting as follows:

"The winner in each race shall be credited with four points. The second yacht in each race shall be credited with two points. The third yacht in each race shall be credited with one point. A member of the club also offers individual prizes to the Corinthian crews of the yachts winning the cup presented by the commodore and that offered by the club.

"The winner in each race shall be credited with four points. The second yacht in each race shall be credited with two points. The third yacht in each race shall be credited with one point. A member of the club also offers individual prizes to the Corinthian crews of the yachts winning the cup presented by the commodore and that offered by the club.

"The regatta committee has issued notice that special 21ft. class races will be sailed on July 4, 13, 25, Aug. 4, Sept. 1, 8, 15. Ties, if any, will be sailed on Sept. 22. In addition to prizes already offered, a member of the club offers a valuable cup for the first boat with three wins to her credit.

### Lasca's Voyage.

The runs made by Lasca on her recent passage from New York to Glasgow were as follows:

	Knots.		Knots.
April 22 to noon	79	April 30	200
April 23	85	May 1	185
April 24	80	May 2	175
April 25	177	May 3	255
April 26	235	May 4	215
April 27	203	May 5	231
April 28	160	May 6	250
April 29	225	May 7, morning of	210

Total to Fastnet, 2,906 knots. At the start the wind was light, but from the fourth day on, the yacht had good breezes, varied by a gale on the 30th, which she went through easily. The Yachtsman says of her:

"Her appearance has been a sort of pleasure to the Clyde critics, and one of all of them write in describing her as a splendid looking vessel, which she certainly is. She has a bow with a strong resemblance to that of our own Calluna, except that the graceful sheer of the counter ends in a neat figurehead. Mr. Cary Smith has been particularly successful in his treatment of her about the quarters. Her masts are stepped so as to give her a large mainsail, and altogether she looks like a lady that will be very well able to hold her own when fighting flags are fluttering. Clyde yachtsmen of all kinds and conditions are delighted to see her in their waters, and they are hoping to get many a sample of 'the nettle of her pasture' ere she leaves for home again."

"On Thursday, May 12, Lasca was towed up the river to the dock of Messrs. D. & A. Henderson, at Partick, to be put in racing fettle."

### Valkyrie's Voyage.

The news of Valkyrie's safe arrival off the Irish coast was recorded last week, and on May 31 she arrived at Glasgow. After favorable winds for three or four days, easterly weather was encountered and slow progress was made, the runs being from May 4: 85, 60, 140, 236, 232, 247, 334, 222, 112, 113, 121, 40, 108, 184, 103, 101, 80, 148, 192, 121, 67, 68, 62, 60. The run of May 9, 327 miles, naught, is very good, Lasca's best day run being 255, while the yawl necessarily carried a much smaller rig, besides being 3ft. shorter. The yacht is now fitting out for the Clyde races early in July.

### YACHT NEWS NOTES.

"Kiley's Yachtsman's Guide and Nautical Calendar" for 1894 is even more complete and compact than in previous years, and quite as indispensable for quick and reliable reference either afloat or ashore. Among the many excellent illustrations of yachts and yachtsmen are new and good portraits of Captain Haff and Mr. John M. Sawyer, the well-known sailmaker. One group, entitled "The Prominent Naval Architects of the United States," is chiefly remarkable for the complete omission of the first and oldest of American yacht designers; one looks in vain for the bald head and benign countenance of the designer of Vindex, Comet, Madcap, Whitecap, Intrepid, Mischief, Fortuna, Katrina, Valkyr, Norma, Yampa, Iroquois, Lasca, and Ariel.

The Seawanhaka Corinthian Y. C. is noted for its club book, and that of 1894 is a very handsome volume, bound in a fine canvas, with the club device on the cover, the wheel embossed in gold and the flag in blue and white. The paper and presswork are greatly superior to the usual standard for such publications.

The Fore River Engine Co., of Weymouth, Mass., is building a 21-footer for Boston racing, from the designs of R. M. Wood, the concern's designer. She will be 31ft. over all, 20ft. 8in. l.w.l. and 8ft. beam, a centerboard boat with 235sq ft. in mainsail and jib.

Una, schr., has been sold by J. F. Ackerman to T. J. McCahill, Jr.

The Brooklyn Y. C. has arranged eight squadron regattas for the season, as follows: June 10, to Great Kills; June 24, to Keyport, N. J.; July 8, to Bergen Point, N. J., anchoring off the Shore House; July 21, to Highland Beach, N. J. (start from Gravesend at 3 o'clock P. M., on July 21, and the race to be on July 22, from Highland Beach back to Gravesend); Aug. 5, to Great Kills; Aug. 19, Atlantic Highlands, Pavonia Y. C.; Sept. 9, to Great Kills; Sept. 21, to Keyport, N. J. Prizes in each class will be awarded the boats finishing first on three occasions during the season. The judges will be the president, treasurer and regatta committee.

Mr. N. D. Lawton of the Atlantic Y. C., has had a peculiarly unfortunate experience with naphtha stoves for yachts; it will be remembered that on July 18, 1890, while at anchor in Morris Cove as the flagship of the Atlantic Y. C. on the annual cruise, his handsome 40-footer Chispa was seriously damaged by fire from a naphtha stove, due to the carelessness of a steward. On May 26, during the opening of the Atlantic Y. C., a similar fire broke out in the galley of the 40-footer Moccasin, on the ways at Mumm's yard, and though it was extinguished by Capt. Hanson, and others who went to his aid, the galley and cabin were seriously burned, and the yacht partly flooded with water. The yacht is being altered by the removal of about 1,000 lbs. of lead, the reduction of her deadwood forward and of the rudder, and the remodeling of her sail plan and interior.

Maspeeth, the steam yacht designed and built by the Gas Engine & Power Co. for Chas. H. Meyer, was launched on May 26 at the Pier Dock. She is 84ft. over all, 76ft. l.w.l., 38ft. 6in. beam and 4ft. 6in. draft. She is fitted with a triple-expansion engine, by Reilly & Cowley, and a Roberts Safety Water Tube boiler. The construction of steam yachts is a new departure for the company, made to meet the demand for larger craft than the well known naphtha engines are adapted for.

The formal opening of the Riverside Y. C. house, took place on May 26, the flag being raised in the afternoon, while a reception was held in the evening.

The Douglaston Y. C. went into commission on May 26, a clam roast playing an important part in the ceremonies of the day.

The rebuilt Princess was formally christened Ivanhoe, on May 24. It is stated that the vessel is now new throughout, the old model being preserved, but every timber being taken out and replaced by a new one of the same shape. When Puritan fails to bring the price of her head and sails, and a five year old yacht of the best construction can be had for a song, such work as the rebuilding of Princess and Lancer is past comprehension.

Judge Brown, in the United States District Court, has decided that William J. Riker was entitled to remuneration from the steam boat Elberon, for damages sustained by the former's yacht, Charlotte, which was run into on July 31, 1893. A referee will determine the amount to be paid.

The Southern Y. C. annual regatta has been postponed from May 26 to June 9 on account of a fire at the club station, West End, New Orleans. A large hotel burned, together with a large pier over which was the approach to the yacht club. There will be a reception and awarding of prizes on the following Monday, June 11. This is the second time the regatta has been postponed, once on account of rains to the club house.

At a meeting of the Inter-Lake Yachting Association, held in the Russell Hotel at Detroit on May 24, the date of the annual regatta in Bay was changed from July 17, 18 and 19 to August 7, 8 and 9. The Association is now composed of the following clubs: Sandusky Y. C., West End Y. C., Detroit Y. C., Citizens Yachting Association, of Detroit; Put-in-Bay Y. C., Cleveland Y. C., Toledo Y. C. and Ohio Y. C., of Toledo.

At an adjourned annual meeting of the Mobile Y. C., held May 24, the following officers were elected to serve for the following year: W. M. Marshall, Com., yacht Annie; J. S. Woodhull, Vice-Com., yacht Zephine; F. L. Ward, Sec'y-Treas., yacht Carrie G.

The Boston Globe calls model yachting an "English fad," regardless of the fact that it has been regularly followed in this country for at least twenty-five years, although never as popular as this fad.

Messrs. Coursons & Pratt, the yacht sailmakers of Boston, have issued a special chart of Cohasset Harbor on a large scale, which will be useful to Eastern yachtsmen.

The California Y. C., recently organized by the sailors of small craft about Oakland, Cal., opened its new club house on May 19 with a dinner and reception. The club has arranged a full list of cruises and races for the summer.

The 8-ton sloop yacht Brandt changed custodians yesterday, pursuant to an order of Chief Justice Daly, of the Court of Common Pleas. Formerly the yacht was owned by Wm. J. Cromwell, but he mortgaged her to Lewis J. Conlan for \$1,000 to secure a debt of this amount. Mr. Conlan, who is a clerk in a district court, obtained a judgment for \$250 40 against the yacht owner, and in this suit Judge Hane-man was appointed receiver of Cromwell's chattels, including the yacht. Mr. Conlan, as mortgagee, claimed the craft. O. H. Sanderson was appointed referee and reported in Conlan's favor. A motion to compel the receiver to turn the yacht over to Conlan was argued before Judge Daly, who confirmed the referee's report.—New York Herald.

Messrs. Higgins & Gifford, of Gloucester, Mass., issue a catalogue of various varieties of all varieties of yacht, surf, fishing and rowing boats, as well as sailing and steam yachts. They have some very fast sloops, including Louette, Trudette and Sassacus, but its specialty is in the line of service and fishing boats for salt water, with their fittings.

On May 31 the schooner Sardinian, Halverson, from Hoboken for Rockland, coal laden, was run into by the steamer H. F. Dimock, Capt. Bearse, from Boston for New York, between Faulkner's Island and Little Gull. Her starboard side was stove in, her bowsprit and jibboom broken, and her headgear carried away. She was towed by the Dimock to Lloyd's Neck, L. I., and then transferred to the tug James Roy and towed to New York for repairs. The H. F. Dimock is the boat that sunk W. K. Vanderbilt's steam yacht Alva in Vineland Sound in 1892.

The Conqueror case still drags its weary length through the courts, a monument to the misdirected zeal of J. Sloot Fassett and Wm. W. Bates.

## MODEL YACHTING.

## American Model Y. C. Opening Race.

PROSPECT PARK LAKE.

The opening races of the A. M. Y. C. were not marked by the accustomed enthusiasm as of yore, some of the fastest models, or we might say skippers, being absent, or not inclined to sail over the courses prescribed by the club. It must be admitted that it is an arduous undertaking on waters surrounded, as the present lake is, by high trees and shrubbery, and will always be very unsatisfactory so long as the wind is obstructed by these impediments to steady sailing.

The efforts of twelve of the members in locating a sailing station at Communipaw, near the Jersey City Y. C., is to be highly commended as a step in the right direction, as the open waters present the most desirable course for satisfactory racing, and it is to be hoped that the club as a club will see the importance of taking advantage of it. Those who have thus far located at the new station speak in the highest terms of its facilities.

The races of May 30 were sailed under the old rule, the  $\frac{5}{8}$  rule meeting with a setback by the board or governors deciding that the present models, which were built on an inch scale, were not capable of being adopted to a  $\frac{5}{8}$  inch scale. At the rule was passed at the last meeting it was decided to sail under the old rule, subject to considerations as to legality at the next regular meeting on June 1. Only two classes filled, the schooner class and third class. The fast schooner Ohyesia was among the missing, she being at the Communipaw station for the balance of the season, leaving May, a new schooner, and Dora S., formerly a sloop, to fight it out. Irving B. failing to sail the course.

In the third class Star was also missing, she being at Communipaw. Ampere absent, her owner having resigned from the club, it was left to Marjorie to win from Vesta, Dolphin and Anna. If the owners of the beaten boats were as expert as the owner of Marjorie a different tale would result. Skimoon was conspicuous by her absence as were others of the second class. First heat  $\frac{1}{2}$  mile.

SCHOONERS 45 TO 60 IN.			
Start.	Elapsed.	Corrected	
May, H. Fisher.....	11 29 49	15 13	17 13
Irving B. P. H. Taylor.....	11 29 12	15 13	17 13
Dora S., J. Smith.....	11 20 63	19 12	21 00 1/2

Heat won by May.

SECOND HEAT.			
May.....	11 56 13	15 07	17 07
Dora S.....	11 56 00	21 15	24 59 1/2

Heat and race won by May.

35 TO 42 IN. BOATS—FIRST HEAT.			
Vesta, J. D. Casey.....	1 36 47	18 43	22 23
Dolphin, J. Smith.....	1 37 15	Disqualified.	
Marjorie.....	1 37 55	18 16	20 33

Heat won by Marjorie.

SECOND HEAT.

Vesta.....	2 10 44	18 16	20 46
Dolphin.....	2 10 47	17 43	20 10 1/2
Marjorie.....	2 11 10	16 50	18 35 1/2
Anna.....	2 11 06	16 46	21 01

Marjorie won heat and race. Anna, J. C. Meyer, just arrived in time to sail this heat. The wind was southeast, the course from West Bay to Point of Rocks and return.

The second race in the Minneapolis Model Yacht Racing Association third class was run on May 25, four boats competed. The wind was most provokingly light. Bluebird, owned by Miss F. English, and sailed by Mr. E. F. English, showed fine light wind powers, and ran clean away from the other three, beating them by half the length of the course. Sea Gull, L. Green, won second prize by 1m. from C. Iris's model; Active, W. Hale, giving up after the others had finished.

The steam yacht race of the Philadelphia Model Y. C. on the Schuylkill came off on May 30. There was a large number of spectators and it was a pity that there were not more starters. Only Marion, F. Mitchell, and Paragon, C. E. Dulin, put in an appearance. The water was smooth and the current pretty strong. The start was at 9:10 A. M. from Girard avenue bridge, Paragon taking the lead and steadily increasing her advantage, winning the race in 8m. 30s. Marion was not timed. She does not seem to go so well with her new furnace arrangement. Paragon was undoubtedly wonderfully improved, and will be hard to beat in smooth water.—Philadelphia Times.

A race was sailed on the Annisquam River on May 30, the times being in minutes and seconds:

	Length.	1st heat.	2d heat.	3d heat.
Zephyr, E. H. Buckley.....	30	7 00	7 10	7 05
Judybe, C. E. Cunningham.....	42	7 20	8 40	9 20

## Eastern Division Meet—Calla Shasta.

The Eastern Division Meet of 1894 was held at Calla Shasta, about four miles south of Springfield, and has given to canoeists the first genuine war canoe race. It was as fine a sight as we have ever had an opportunity to witness as a meet. There were five crews entered, of nine men each, and the five boats finished not more than three boat lengths from the first to the last boat. The pace was hot and the interest very much increased. It was won by the Newton crew with the Puritans, of Boston second.

The camp opened officially on Monday, although about fifty of the members came into camp Saturday and Sunday, and by Wednesday morning there were very close to 150 A. C. A. men in camp. Monday and Tuesday were spent in short trips and general lounging about camp with camp fires each evening. Wednesday was given to the racing, but this, except the war canoe race and the unlimited sailing, was unimportant. There were four entries in the latter, and it was won by Butler, all the other canoes upsetting before the finish. Butler also won the Visitors' sailing race, for which a handsome cup was given by the Springfield C. C. There were plenty of handsome prizes, but this did not seem to draw entries as might be expected, and from a canoeist's point of view the number of canoes in camp were very limited.

Nickerson and Rice were on hand, and it was very gratifying to the older members to once more see them at a meet. Among the visitors outside the Division were: Com. Dorland, Ex-Commodore Winne and Wilkin, Vice-Com. Schuyler, L. B. Palmer and Jas. K. Hand, Jr.

Mr. Rockwell (one of the members owning a cottage at Calla Shasta) was very attentive and courteous in his care of the visitors. Vice-Com. Barney was in charge, but the details of arrangements and work in connection with the camp fell upon Purser Knappe, who deserves the thanks of every canoeist present for the earnest efforts made in their behalf.

The Division engaged a small ferryboat to run between Springfield, Long Meadow and Camp, and on Wednesday the people from Springfield came down in large numbers by this boat as well as by carriages, and practically took possession of everything.

Mrs. Lester, the owner of the house near by, who catered for a large majority of those present, reported that she had nearly 300 to dinner on that day.

## A. C. A. Membership.

EASTERN DIVISION: Herbert Lowell Rich, Geo. E. Blackmer, Jas. W. Hubbard, Wm. A. Belock, H. H. Emsworth.

## International Canoeing.

From the Field.

TAKING another view we do not look upon the Bourne End course as a happy place for an international race for the challenge cup, nor do we think the present conditions of the race, which have been altered from three races to one race, at all fitting for so an important event. Any one of many common accidents may happen to our visitor or to our best man during the one race, and there is no appeal to a second and third day's contest. Grounding, touching a buoy, collision, spar breaking and ghastly flukes are among the commonly experienced accidents, and on open lakes, miles wide, whereas Bourne End Reach is about half a mile long by some 80yds. across. The tidal water of Erith, was suggested at the spring meeting, but was not accepted, the plea against it being that modern canoes could not live there in a breeze; however, it would be better to be swamped in fair open water than to be fluked in a ditch, and we place such handicap rather against our American visitor.

In America, the canoe races of the New York Club are sailed on water as open, and often as rough as our Thames Sea Reach, or the Mersey; with strong tides and the heavy swells of frequent passing steamers; and on open lakes, miles wide, whereas Bourne End Reach is about half a mile long by some 80yds. across. The tidal water of Erith, was suggested at the spring meeting, but was not accepted, the plea against it being that modern canoes could not live there in a breeze; however, it would be better to be swamped in fair open water than to be fluked in a ditch, and we place such handicap rather against our American visitor.

But there is a more forcible handicap against us in favor of a challenger from abroad, brought about by the absurdly lax conditions at present ruling competitions for the challenge cup. A week's notice is all that is required from challengers, and in the present case the first intimation of an American challenge comes to us barely three weeks before the race day. We have more than once during the last two years urged upon the Royal C. C. the danger of this state of things, especially in view of the stagnation into which canoe sailing, distinct from canoe yawl sailing, has drifted.

The American FOREST AND STREAM has reproduced our "Notes of the Week" thus: "In view of the fact that an American canoeist will visit England this year to compete for the R. C. C. challenge cup, the following from the Field is of special interest. Field says: 'With the advance of the season, canoe men are becoming aware that, so far as the metropolitan district is concerned, no new canoes are being built, notwithstanding the free hand in designing which has been given by the new rules of classification. It may, of course, be possible that new vessels are being built for the members of the R. C. C. in Scotland, but, unless there are such dark horses ready to bud forth, the club stands in real danger of seeing, for the first time, its £50 challenge cup competed for by visitors, and carried away for a year without any real attempt at defence by the club. Under the new rule of classification, it would be absurd to maintain that the present holder of the cup, the Stella, could except by a fluke, beat new canoes specially built and fitted for racing, fitted with bulb fin-keel and una or sloop rig.'"

Well, here we are, caught in that very position; the real leaders of canoe sailing either gone off into canoe-yawls or without any new craft built to full advantage under the altered rules of measurement, and no time for a defender or defenders to effectively arm themselves for the defence of the cup, or to make a show of competitors worthy of the old Royal C. C. in the defence of one new canoe, which may be ready in time. It is being built in the country, and said to be for a Royal C. C. member, well known in racing, Mr. de Quincey, and we trust this is a fact; but in a matter of international competition it becomes the duty of the club to organize a proper defence, and not to trust merely to private enterprise coming forward.

## Major S. T. Fairtlough.

EVERYONE who was at the Grindstone meets of 1884-5 and 6, knew Major Fairtlough, and everyone who knew him at all well, most of all those of the Kingston Military College who attended the meets under his care, loved him for his many admirable qualities. Since 1886, he has been on foreign service, mostly on the African coast. The following telegram from Kingston to the New York Herald, will be read with sorrow by all of the older A. C. A. men:

This morning (May 20), Mr. S. T. Fairtlough, of the R. C. C., received a cablegram from England, announcing the death of Major Fairtlough, R. A., at Sierra Leone. The intelligence of his death was totally unexpected. When the Major last wrote he was in good spirits, having just gone through a campaign against the Arab slave dealer Fadi Shah near Bathurst. It was a complete success, and the Major was highly commended for his services.

He was for a long time professor of artillery at the Royal Military College, on May 25, Colonel McGill received a letter from Major Fairtlough, in which he stated that the government had pressed upon him the Governorship of Gambia, and that he had accepted the position.

## Rifle Range and Gallery.

## Hartford Rifle Club.

HARTFORD, Conn., June 2.—I inclose you scores made at the annual prize shoot of the Hartford Rifle Club, open to all comers, May 30. German ring target, 200yds, off-hand, three-shot strings, three scores to count. Good light but a very troublesome wind:

S. J. Lyon.....	21 25 23-69	25 23 24-71	25 24 25-72-212
F. K. Rand.....	25 21 23-69	25 23 24-71	25 22 25-72-212
H. M. Pope.....	23 22 25-70	23 23 24-70	23 23 25-71-211
M. Dorrier.....	24 23 30-69	23 24 23-69	23 23 22-70-208
J. M. Fouts.....	22 21 24-67	22 22 23-68	22 22 23-68-205
W. D. Palmer.....	20 23 30-65	23 21 21-66	24 22 23-71-202
Bill Nye.....	22 17 23-62	22 25 16-63	23 25 25-73-198
D. S. Seymour.....	19 23 33-65	18 23 23-64	24 22 22-68-197
L. S. Allen.....	24 30 19-63	14 24 25-63	25 23 22-70-196
C. O. Talbot.....	24 34 14-63	15 23 23-63	25 21 24-70-196
C. O. Whiting.....	21 21 21-63	24 20 20-64	24 18 23-65-192
O. P. Arnold.....	19 24 20-63	19 21 24-63	20 20 25-65-192
W. J. Dunbar.....	10 21 22-62	24 24 25-63	23 23 19-65-190
R. D. Garden.....	24 18 17-59	20 20 20-63	25 20 22-67-189
J. N. Lane.....	21 17 19-57	18 21 23-62	25 21 20-66-185
T. B. Covel.....	21 21 17-59	22 19 20-61	20 24 19-62-182
A. Meridian.....	20 17 16-53	15 23 19-57	21 20 23-64-174
W. H. Seery.....	14 17 22-53	19 20 19-57	21 25 18-60-171

The premium for the best three scores in the morning was won by Pope with 63 70 71. First flag by Dunbar, last flag by Pope, most flags by Lyon with 12, next most by Pope with 7. H. M. Pope, Sec'y.

## Rifle at San Antonio.

THE regular practice shoot of the San Antonio Rifle Club was well attended on the 27th inst. The practice was confined to open sights and some excellent scores were made, as will be seen below, at 200yds, rest, open sights, 10 shots:

E. D. Bach.....	11 7 9 11 7 10 6 7 6 9-84
R. Neumann.....	8 9 12 9 9 11 11 10 9-80
E. Seiffel.....	7 9 9 9 6 7 10 7 9-78
A. Uhl.....	8 11 9 9 7 10 11 9 9-91
Alvis Altmann.....	9 8 11 9 8 9 8 7 8-84
Heye.....	10 7 8 9 8 7 10 8 8-81
Herpel.....	8 7 5 7 8 8 9 8 8-81

At 200yds, off-hand, 10 shots:

R. Neumann.....	7 5 0 5 9 7 5 6 8-62
A. Guenther.....	7 7 8 8 6 10 8 8 7-78
S. Seiffel.....	7 5 8 8 6 10 10 6 9-78
C. Hummel.....	9 8 6 10 7 7 5 5 6 9-72

At 100yds, rest open sights:

J. Marten.....	230-2268	Dietrich.....	225-2189

## Zettler Rifle Club.

TWELVE members of the Zettler Club visited Wissel's Cypress Hills Park on June 3 to participate in the regular bi-monthly shoot. The day was an ideal one for the rifle shooting, a clear light and very little wind giving opportunity for the making of high scores. The best individual score of the day was made by F. C. Ross, who succeeded in making the fine score of 231 points out of a possible 250. Holges was second with 223 and Hansen third with 225. On the bulls-eye target, 4in. center, 3 shots only, Plaisted was first with three and Ross second with two. On the man target Holges was first, Krauss second and Flach third. Scores:

Ross.....	22 23 24 24 24 21 2 2 24 24 25-221
Holges.....	22 23 24 24 24 21 2 2 24 24 24-220
Flach.....	22 25 19 24 25 21 23 23 24 21-223

Man target, 3 shots, possible 60:	
Holges 58, Krauss 57, Flach 56, Engel 55, Ross 52, B. Zettler 52.	

## Chicago and St. Louis.

THE second telegraph match of the series of three, between the Missouri Rifle and Pistol Club, St. Louis and the Pastime Club, of Chicago, took place on the evening of May 23. As in the previous match, the shooting took place in the galleries of the Messrs. Ingersoll and Capt. Schaff, respectively. Following are the scores:

The Pastime Club.		Missouri Rifle and Pistol Club.	
Fred Ingersoll.....	10 10 10 9 10 10 9 9 7-91	Capt Schaff.....	9 9 7 10 9 10 10 10 8-93
T. J. Storr.....	9 9 10 8 8 8 10 10 10-91	R. W. Staley.....	10 9 9 10 9 10 9 10 10-94
G. Newport.....	10 10 9 8 8 10 10 10 9-93	A. P. Gosnell.....	10 9 10 9 7 7 7 10 10-88
F. W. Morgan.....	8 9 9 10 10 10 10 10 8-91	Chas Vogt Jr.....	9 10 10 10 10 10 9 10-90
R. S. McBean.....	8 8 10 10 10 9 9 9 8-89	S. J. Dorman.....	10 9 9 9 8 10 10 9 10-93
L. H. Henderson.....	9 10 10 10 10 10 10 10 9-91	F. Hutchinson.....	8 10 10 10 10 10 9 9 8-94
J. H. George.....	10 10 7 7 10 10 10 10 8-83	Wm Bauer.....	5 6 9 9 8 9 10 8 10 10-84-740
C. A. Hankle.....	9 9 9 8 10 10 10 9 9 8-91-730		

Score of ninth and tenth men.

H. H. Henderson..... 7 9 10 8 9 9 8 8 10 10-81  
R. H. Henderson..... 9 9 10 8 9 9 8 8 10 10-81  
The conditions required ten men to a team, ten shots each on a standard target. A St. Louis gentleman, informs me that Mr. Ingersoll promised to have ten men sure in this event "or bust a string," but he wired during the progress of the shoot that he could not get ten shooters together. This left two of the best shots of the St. Louis team out of the shoot, namely Col. Buchanan and Mr. Henderson. On the scores of the eight best, St. Louis is twenty-two points ahead.

A correspondent, agent this shoot, writes me as follows: "I wonder or would like to know the population of Chicago, when a city like it cannot raise ten men from a three-year-old club." Mr. Frederickson referred at St. Louis for Chicago, and Mr. E. E. Dalton officiated for St. Louis, at Chicago, in the like capacity.

B. WATERS.

## Heidenreich Rifle Club Prize Shoot.

THE Heidenreich Rifle Club held its third annual prize shoot and festival in Lion Park on May 27 and 28. The weather conditions on the first day were fine for outdoor sport, and as a consequence there was a fairly good attendance of riflemen. The second day opened dull and cloudy and in the early part of the afternoon heavy showers began to prevail, and the day closed decidedly out of gear from a picnic point of view. The shooting programme was of that liberality to call for liberal patronage from our local experts. The ring target called for 14 prizes, ranging from \$35 down to \$3, two best tickets to count. On the bulls-eye target there were 12 prizes, ranging from \$20 to \$2, the best center shot to count. There were also premiums for the most bullseyes, ranging from \$10 to \$2. The length of the range is about 280ft. and the shooting was limited to .22cal. rifles only. The scores are appended:

Ring target, tickets 3 shots, two best to count:	
G. Schlicht.....	63 64 64 64 64 64 64 64 64 64-631
L. Flach.....	63 64 64 64 64 64 64 64 64 64-631
M. Dorrier.....	70 67-137 W. Rosenbaum..... 65 64-129
V. Horn.....	69 67-136 L. Vogel..... 65 64-129
H. Holges.....	69 67-136 M. C. Muzzo..... 64 63-127
F. C. Ross.....	67 64-131 M. Roedel..... 62 61-125
E. Fisher.....	66 65 141 W. Dalton..... 62 61-125
Best bulls-eye: W. Koch 25 degrees, L. Flach 30, V. Horn 30, H. Bush 35, W. Dalton 25, G. Schlicht 35, H. Holges 37, F. C. Ross 37, T. McManus 39, L. Enders 40, F. Goodman 42, Roedel 42	
Most bullseyes: V. Horn 69, F. C. Ross 31, G. Schlicht 30, W. Rosenbaum 24, S. Schmidt 23, H. Holges 20, M. Radler 14, W. Koch 10.	

## Paterson Rifle Association.

NINE members of the Paterson Rifle Association met on the Bunker Hill range on May 27 for practice. Owing to the fact that there had been no practice shooting for the past four weeks the members were all a little off in form. Scores:

Wm Dutcher.....	15 18 15 17 15 19 17 20 18 14-163
Jas Welcher.....	15 18 16 15 16 17 18 20 14 17-161
Jas Foster.....	18 19 19 17 18 18 20 17 15 14-177
B. Maskell.....	19 17 17 18 14 13 15 15 18-160
A. Newby.....	14 15 19 13 18 16 15 14 16-167
T. Foster.....	18 16 18 19 1

**New York Rifle Club.**

THE New York Rifle Club held its second practice shoot in Armbruster's Park, Greenville, on Saturday of last week. The weather was warm and cloudy, with a strong southwest wind. Light showers in the latter part of the afternoon interfered somewhat with the rifle-men. Dr. Chadbourne, with his little 25-15 Stevens, made the high score of the day; Major Shorkley, with the aid of his 25-20 Remington, was second with 85. On the German ring target, three shots per man only, Isbell was high with the fine score of 73 out of a possible 75. Gensch and Moss tied for second place with 67 each. Scores, 10 shots, standard American target:

Dr. Chadbourne.....	69	91	Isbell.....	83	87
Major Shorkley.....	86	88	Moss.....	65	74
C E Gensch.....	84	85	Major Crocker.....	53	61
Downs.....	68	70			

German ring target, 3 shots, possible 75: Isbell 73, Gensch 67, Moss 67, Downs 54, Chadbourne 51.

**Conlin's Target Shoot.**

MANHATTAN ATHLETIC CLUB, New York, May 21.—*Editor Forest and Stream:* I beg to inform you that I have just received from Sir Henry Harford, the distinguished English rifleman, some of the best scores of rifle shooting lately made in Great Britain. I also have the latest scores of the champion revolver shot of England, Mr. Walter Winans, together with photographs of many of the European champions. A collection has also been received by me from the celebrated gallery of Monsieur Gaston Renette, 39 Avenue d'Antin, Champs Elysees, Paris, showing the most remarkable revolver shooting made in the late great match for the championship of France. I have the pleasure to invite your readers, whom I know to be interested in rifle and pistol shooting, to visit my gallery and inspect them. JAS. S. CONLIN.

**Greenville Rifle Club.**

FIFTEEN members of the Greenville Club were present on Friday night, to participate in the handicap class shoot. W. C. Collins with his 30-06 point target succeeded in defeating the old veteran, M. Dorrier by one point, for first prize in the first class. Class winners: First class—Collins first, Dorrier second. Second class—Chase first, Chavant second. Scores: Dorrier 242, Collins 233, Scheeline 233, Agneau 230, Spahn 230, Fogen 221, Graef 221, C. Boag 235, J. Boag 235, Purkess 234, Dadds 234, Chavant 233, Gotthardt 233, Chase 236, Daniels 218.

**Pittsburgh Rifles.**

PITTSBURGH, Pa., May 25.—The regular weekly shoot of the Pittsburgh Rifle Club was held at the club grounds at Salt Works yesterday. Standard target, 200 yds., off-hand.

Hogden.....	79	83	84	87	Keggie.....	75	79	75	80
Brehm.....	78	78	82	80	Italy.....	68	67	69	70
Stener.....	77	76	81	82	Gilbert.....	77	75	75	75

PROJECTILE.

**Palisade Rifle Club.**

THE following appended scores were shot at the weekly shoot of the Palisade Club on May 27, 10 shots, distance 25 yds.: C. Hemberger 226, Henry C. Zuelch 204, Fred Esper 233, George Dorr 227, Adolph Ahles 212, Fred Krobatsch 231.

**RIFLE NOTES.**

Sixteen members of the New York Rifle Club visited Armbruster's Park, Greenville, N. J., on Decoration Day, and held an all-day shoot. The weather was mild and pleasant and some good scores were made, the scores will be found in another column.

On Saturday of last week, at the weekly shoot of the New York Rifle Club, Major Shorkley made a run of 21 sin. bulls, shooting off-hand. The major shoots a 25-20 Remington rifle, with telescope attachment. When one considers the age of this old veteran, his shooting is somewhat remarkable.

On Wednesday of last week, on the Greenville range, Plaisted made the following run of 25 shots on the Standard target, off-hand, with Ballard .38-55, using the 255 patched bullet and powder charge as follows: 6grs. Leonard nitro, and 42grs. Hazard F. G. The third and twenty-third shots were the fault of bad holding. Score: 8 9 6 10 9 10 8 9 9 10 8 9 9 10 9 9 10 9 9 10 217.

Average 8.6. This score was followed by a 10-shot score upon the German ring target, same conditions, with the following result: 24 23 20 25 25 23 23 22 23 20=227.

Three members of the Greenville Rifle Club visited Armbruster's Park on Saturday afternoon of last week and participated in off-hand practice. Their scores are appended:

C Boag.....	21	16	16	24	22	23	25	21	24	—213
C Scheeline.....	13	22	18	21	15	18	24	16	14	—196
J Spahn.....	23	23	17	23	15	24	20	21	18	—189

The Columbia Schiltzen Corps will hold its annual festival and prize shoot in Cypress Hill Park, June 10-11. Fifteen cash prizes ranging from \$20 to \$25 will be put up for the competing marksmen.

The New York Schuetzen Corps has sent out its programme for the thirty-seventh annual festival and prize shoot, which takes place in Union Hill Park, June 20 and 21. Five hundred dollars in cash prizes and premiums will be offered for the experts to compete for.

Barney Zettler tried the combination charge of nitro and black powder in his rifle last week, but he neglected to temper his bullets to the proper hardness necessary for the load, and the result was a much leaded barrel. With a little further experience he will reach satisfactory results.

Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

**FIXTURES.**

June 4-9.—Illinois State Sportsmen's Association tournament, at Chicago. W. L. Shepard, Sec'y.

June 5-7.—Iowa State Sportsmen's Association's tournament, at Independence, Iowa.

June 5-7.—Wilmington (Del.) Rod and Gun Club tournament.

June 7-9.—Oregon State Sportsmen's Association's tournament, under auspices of Willamette Gun Club, at Portland, Oregon.

June 11-16.—New York State Sportsmen's Association for the Protection of Fish and Game, thirty-sixth annual tournament, at Utica, N. Y., under auspices of Oneida County Sportsmen's Association.

June 12-14.—Kansas State Sportsmen's Association's fifth annual tournament, Topeka, Kansas. J. C. Clark, Sec'y.

June 12-14.—Atlantic City Rod and Gun Club, three days' tournament. Address R. C. Griscom, Sec'y, Atlantic City, N. J.

June 14-16.—Sportsmen's Association of the Northwest's tenth annual tournament, under auspices of Tacoma Rifle, Rod and Gun Club, at Tacoma, Wash.; \$1,500 added money; open to the world. E. E. Ellis, Sec'y.

June 16.—Boiling Springs Gun Club, Rutherford, N. J. Mixed race at 100 bluebirds, \$5 entry, 15 entries or over, 5 money, open to amateurs only.

June 19-21.—Chamberlin Cartridge and Target Company's first annual tournament, at Cleveland, Ohio; \$1,000 added money.

June 20-21.—Belfast (Me.) tournament, under the management of Belfast Gun Club. Chas. R. Coombs, Sec'y.

June 25.—Union Gun Club tournament in conjunction with monthly team shoot of New Jersey Trap-Shooters' League, at Springfield, N. J.

June 27-28.—Interstate Manufacturers' and Dealers' Association's sixth tournament, under the auspices of the Elwood Gun Club, at Elwood Ind. Address Paul R. Litke, Sec'y.

June 28.—New England Shooting Association championship tournament, under the auspices of the Colt Hammerless Gun Club, at Hartford, Conn.

June 28-29.—Binghamton (N. Y.) Gun Club's first annual tournament. H. W. Brown, Sec'y.

July.—Orangeville (Md.) tournament; open to all. J. A. Hartner, Sec'y.

July 4.—Towanda Rod and Gun Club's sixth annual tournament, at Towanda, Pa.

July 4-6.—Winner Cartridge Co.'s second tournament, at St. Louis. Bluebirds and sparrows; open to the world. J. L. Winston, Sec'y.

July 5-6.—Little Rock (Ark.) Shooting Association tournament, open to all. Address Paul R. Litke, Sec'y, Little Rock.

July 16-18.—Standard Gun Club tournament, at Baltimore, Md.; \$150 added.

July 18-19.—Interstate Manufacturers' and Dealers' Association's seventh tournament, under the auspices of the Kentucky Gun Club, at Louisville, Ky. The Kentucky Gun Club will add from \$200 to \$400.

July 18-19.—Dr. Wallade's bluerock target and live bird tournament, at Newport, Mich.

July 18-19.—Central New York Trap-Shooters' League, fourth tournament, at Syracuse.

July 26.—New England Shooting Association championship tournament, under the auspices of the Willamette Rod and Gun Club, at Willamette, Conn.

Aug. 13-18.—John Parker's fourth international tournament, blue rock targets and live birds, at Des-chree-shos-ka Island, near Detroit, Mich.

Aug. 21-24.—Pennsylvania State Sportsmen's Association annual tournament, under auspices of Altoona Rod and Gun Club, at Wopsonock Park, Altoona.

Aug. 23.—New England Shooting Association championship tournament, under the auspices of the Atlantic Trap Shooting Association, at Lynn, Mass.

Aug. 29.—Central New York Trap-Shooters' League, fifth tournament, at Auburn.

**Trophy Scores of Garfield Gun Club.**

CHICAGO, May 29.—*Editor Forest and Stream:* The Garfield Gun Club has held four regular shoots this season, one on each Saturday in May, but only one score has appeared in your columns, and that was somewhat disfigured by being telescoped with the copy sent you by our friend Goodrich, secretary of the Eureka Gun Club. Goodrich evidently feels that the disfigurement was the other way, as I see that he is sitting up nights to get his report in a week earlier than we can possibly do, to avoid accidents. If it had been any other club's scores we should have put on our war paint and run down and scalped the devil in your composing room who mixed up the forms; but they shoot fairly well, passably so (beat us twice last year, but keep it dark), and after a little more practice will be able to travel in good company, and then we'll not care so much if the scores are mixed.

The Garfield Gun Club is divided into three classes, A, B and C, and a trophy is awarded each month to that member in each class who makes the highest percentage in his three best scores. The trophy contest is shot every Saturday afternoon on the club grounds, at 25 bluebirds, known trap, unknown angles. The winners are barred for the succeeding two months, so as to insure a better distribution of the trophies, which are the same for each of the classes. For the May contest there were given three genuine sole leather gun cases of latest design, fitted with lock and key, pockets, etc. The contestants do not know what the trophies are to be until the final shoot, so that the element of surprise is added to the pleasure of victory. As we have been neglectful of our duty in forwarding scores on time, we will not send them now as they are somewhat stale and musty, but inclose instead the following tabulated statement of our May trophy shoots:

Class A.	May 5. May 12. May 19. May 26. 3 best scores					Percentage
	May 5.	May 12.	May 19.	May 26.	3 best scores	
F E Adams.....	25	21	17	21	89%

F R Campbell.....	..	8	..	..	..	
Ackerman won C trophy.						

**Calumet Heights Gun Club.**

MR. G. C. LAMPHERE, secretary of the Calumet Heights Gun Club, writes me as follows, concerning club matters: "The recent storms have prevented the usual number coming down to our club over Sunday. Still our average attendance is about thirty-five weekly, which number will increase largely when the weather gets settled."

"The fine wind of last week's storm was had from our club house, as we are located on the extreme southern end of Lake Michigan."

"The three-masted schooner H. B. Moore, which was driven ashore during Friday night, has been abandoned and given to our manager, Mr. H. W. Starr. She lies about 500 yds. west of the club house. As the storm destroyed our five traps, trap stand, etc., our weekly contests for the diamond trophies could not take place last week and in order to make up for the loss of the shoot we repaired our traps and shot two contests this week. Both matches were shot in the teeth of a gale of wind, blowing 30 or 40 miles per hour."

The club's lease of the property is considered good for ten years longer. Their shooting events are popular and enjoyable.

Following is the score of May 17:

Diamond Trophy Contest at 40 targets, 5 known traps and angles:	
S M Bodin.....	01100101111110011111111111111111—32

**Fargo Gun Club.**

FARGO, N. D., June 1.—Inclosed find the scores as made on Decoration Day by the Fargo Gun Club. The Lyon-Carpenter event was close from start to finish. The score when 10 targets had been shot placed Carpenter one in the lead. The next 10 evoned the scores. Lyon gained one on the last 10 and won the match. It is probable that a match will be arranged between the same parties again. Mr. Robbins chose Mr. Lyon, and they will shoot a match against any other two trap shooters, residents of North Dakota. They will not have to wait long for a match, as several members of the Fargo Gun Club are anxious to shoot against the team.

The complete scores are as follows:

No. 1, 10 singles, known traps; Carpenter 8, Lyon 8, Robbins 7, Akin 7, Ercanbrack 9, Robbins 9, Schofield 2.

No. 2, 5 pairs; Carpenter 8, Lyon 8, Robbins 8, Akin 5, Ercanbrack 9.

No. 3, special match, Lyon vs. Carpenter, 30 targets, 10 singles, known traps, 10 singles, unknown traps, and 5 pairs: Lyon 24, Carpenter 23.

No. 4, badge score, 15 singles, unknown traps and 5 pairs: Akin 18, Carpenter 14, Ercanbrack 13, Lyon 22, Robbins 19, Robbins 11, Schofield 10.

No. 5, 10 singles, known traps, unknown angles: Carpenter 9, S. S. Lyon 6, Robbins 7, Reuschler 7, Roberts 5, C. A. Lyon 6.

No. 6, 15 singles, unknown traps, and 5 pairs: Lyon 15, Robbins 19, Robbins 19, Kimmel 14, Reuschler 5, Schofield 7.

C. E. B.

**Scores at Kearneysville.**

KEARNEYSVILLE, W. Va.—The shoot recently held here was a grand success. It demonstrates clearly that Mr. W. H. Kearfott, who managed it, understands how to get up a shoot. There was not a hitch in the management or even one contention which is so often seen at shooting tournaments. The shooters were all of one accord in voting Mr. Kearfott their thanks for his kind and hospitable treatment. There were fully one hundred shooters present. The Winchester and Harper's Ferry boys seem to have it all their own way. They should have been handicapped as they are professional shooters without a doubt. The great success which attended the shoot caused the shooters to insist upon Mr. Kearfott holding another one some time this summer, which he has decided to do about the first of August, which will be an all-day shoot. Shoot No. 1 at 25 single Keystone targets:

Drumbaugh.....	000011011001010101010000—9

**No Mayor's Address at Utica.**

"THERE will not be one thousand shooters in attendance, neither will there be a special train, nor an address of welcome from the mayor of the city, but in the place of the same there will be the usual jolly crowd of sportsmen, to whom will be extended the fraternal greeting that the old Oneida County Sportsmen's Association knows so well how to extend. Come and see us, one and all." So wrote Messrs. A. S. Hunter, H. L. Gates and John Cummings, Jr., executive committee of the New York State shoot at Utica next week, under the auspices of the Oneida Association.

The shooting will be at Riverside Park, five minutes' walk from Baggs and the St. James hotels, beginning at 8 A. M., June 11. The annual meeting will be held Monday, June 11, at 8 o'clock in the evening, in the parlors of Baggs's Hotel. The association headquarters will be at Baggs's Hotel.

Arrangements have been made for reduced railroad fares. When purchasing tickets, visitors should be careful to ask the ticket agent for a certificate.

The Oneida County Sportsmen's Association have aimed to present a programme not too lavish in its outlay of cash, yet one that will be satisfactory to the trap-shooters of the Empire State. The programme for the State events is of a character to attract the shooters of this State, the State events are wide open without handicap, and will attract many shooters from without the State of New York. We have the finest target grounds in the world, bar none; there are no long and tiresome street car and bus rides, but a veritable shooters' paradise at your hotel door.

We shall have four sets of expert bluerock traps with electric pulls located as near to each other as possible; this prevents the shooters being scattered. Two sets of these traps will be devoted to regular State events and two sets to sweepstakes; only one regular event will be permitted at a time, and only one sweepstake event at a time. By a system new at this shoot, a shooter will make his entries so that by no possibility will he be called for in two places at the same time.

The regular event traps will be set for ordinary flights, while the sweepstake traps will be set to throw as heard as possible. The shooters who participate in our sweepstake events will never be heard to complain of "duffer birds."

**Champions of the World.**

A FRIEND sends a news clipping, showing in the same column the following reports of matches:

"DAYTON, O., May 23.—J. A. R. Elliott, of Kansas City, champion live bird shot of the world, and Rolla O. Heikes, of this city, who holds the same distinction of the clay pigeon traps, indulged in a 100 live bird contest this afternoon at the base ball park for the world's championship. It was a stiff fight, the prize was closely contested throughout and resulted in a victory for Elliott by a score of 98 to 90."

Of course, this makes Mr. Elliott champion of the world some more. But what is he going to say to this?

"RICHMOND, Va., May 28.—The second of a series of pigeon shooting matches took place here to-day between William Tell Mitchell, of Virginia, and E. D. Fulford, of New York, for the championship of the world, 100 birds and \$250 a side. As on the occasion of the first contest, Fulford won, killing 48 birds in fifty shoots, against 47 by Mitchell. This ends the contest."

No, it doesn't end the contest of championships. My friend says: "Suppose there were a sufficiency of world's championship contests arranged for the 28th, and the press representative of Interstate-Prairie Gun Club symposium got left."

There are champions, and champions, and then again champions. Let the merry war go on. We'll every one be champions, by-and-by. E. H.

**For the Juvenile Championship.**

FOLLOWING is a copy of a letter addressed to Mr. Ed. Bingham, one of the celebrated trap shots of Montgomery Ward & Co.'s staff. It will prove interesting to all boys who aspire to competitive honors. It, too, contains a very generous admission on the part of Mr. Bisson, as his son Master Alfred won the event to which he refers.

B. WATERS.

CHICAGO, May 24.—Dear Sir: As your protégé, Master Charles Burr, is undoubtedly the best trap shot of the three boys who contested for the juvenile medal at the Interstate Manufacturers' and Dealers' Association's tournament, in fairness to him, I will make a proposition for another contest for the juvenile championship of the United States under sixteen years of age, the match to be at 50 targets, known traps and angles, price of entrance \$5, targets to be paid by each contestant, 10-gauge guns barred.

All entrance money to go towards the purchase of a solid gold medal, said medal to be contested for three times before it becomes personal property. Any challenging holder of medal to deposit a proportion of cost of medal.

C. H. BISSON.

**Close Shooting at Riverton.**

PHILADELPHIA, June 4.—The shooting match between R. A. Welch and Fred Hoey for the Riverton Challenge Plate, which took place to-day at Riverton, resulted in a close race, won by Welch by 1 bird, the score being 91 to 90. It was not a particularly good day for shooting, as the heat had made the birds listless, and they did not rise well when the traps were sprung:

R A Welch.....	0212222222211122210222121210111121300121111122
Fred Hoey.....	12112112112111212222121212121212121212121212121212230

**Kansas State Shoot.**

ALL signs are favorable for a large attendance at the Kansas State shoot, to be held at Topeka, June 12, 13 and 14. The management announce that an open race of one fare for road and river has been granted by all roads during the tournament, from all Kansas points and Kansas City, and St. Joseph, Missouri. The adoption of the North handicap has met with much favor from the amateur shooters of the State, and a large number have already notified the secretary of their intention to be present. Programmes can be had by addressing the secretary, Mr. J. C. Clark, at Topeka.

**"Trap-Shooter's Ready Reckoner."**

THERE has just come from the FOREST AND STREAM press an extremely useful and complete reference book for trap-shooters. Its full title reads: "Trap-Shooter's Ready Reckoner. A series of tables showing at a glance the division of purses under all conditions, simple and complex, with entries from one to fifty. For use by individuals, clubs and tournaments. Compiled by J. C. Clark, Secretary Kansas State Sportsmen's Association." Price 25 cents, postpaid, by Forest and Stream Pub. Co.

H. D. SWARTZ, Sec'y.

## INTERSTATE AND MICHIGAN SHOOT.

GRAND RAPIDS, Mich.—*Editor Forest and Stream:* The fifth tournament of the Interstate Manufacturers' and Dealers' Association, combined with the second annual tournament of the Michigan State Trapshooters' League, was given under the auspices of the Valley City Gun Club, at Grand Rapids, Mich., May 30, 31 and June 1.

The grounds of the Valley City Gun Club are situated at Fisk's Lake, about twelve minutes' ride by electric cars from the center of the city and are among the finest trap-shooting grounds in America.

The tournament proved to be the most successful gathering of the kind ever held in Michigan and the general average of records is as good as that of any State gathering of trapshooters.

Budd, Heikes, Grimm, Van Dyke, Young, Elliott, Courtney, Willard and Parker were specially prominent among the visitors from a distance. Of the Grand Rapids men who ranked well up among the leaders were Walton, Davidson, Harry Widdicombe and Ralph Widdicombe.

The Interstate Manufacturers' and Dealers' Association's tents having been so badly damaged by the storm at Chicago, were sent home for repairs and the dealers were represented in tents erected by the Valley City Gun Club for that purpose.

Manager Elmer E. Shaner attended to details, and everything ran very smoothly, the office work being especially fine. All events were paid off promptly at their finish, and it was a common remark among the shooters that it was one of the best conducted tournaments they had ever attended, all of which was highly gratifying, following the success of the tournament.

The first day but eight regular events were finished before a heavy rain began, which stopped the shooting for the day. The second day's programme was finished with more favorable conditions, after the storm had characterized the day previous. Several of the local shooters and a number of Michigan men scored places in spite of hot competition.

In the evening the Valley City Gun Club gave a banquet to the visiting shooters at Swetland's Pavilion at Reed's Lake. There were 75 covers laid, and the tables were arranged in the form of a Maltese cross, with a huge cluster of hydrangeas at the point of crossing. The waiter's service was excellent, and the music, which was furnished by the local orchestra, was very fine. The banquet was a success, and the shooters were given an evening of rare pleasure. Following is the menu served at the banquet:

Puree of tomato. "READY POLL." Amountillo sherry.  
Cucumbers. Lake Superior whitefish.  
Spring chicken, "straight away." Sauté potatoes.  
New potatoes in cream. French Peas.  
Poulet canet claret.  
Lobster salad. Strawberries. Cakes

Dr. E. S. Holmes, the father of the Michigan game laws, and one of the pioneers of hunting circles, officiated as toastmaster and called for responses to sentiments as follows:

"Trap Shooting." The kindergarten of field sportsman'ship.—George Altvater, Washington, D. C.  
"Live Birds."—Mark Morris, Grand Rapids, Mich.  
"Auld Lang Syne."—Will do for powder, but no good for cigars.—W. M. Thomas, Bridgeport, Conn.  
"Sportsmen."—T. Stewart White, Grand Rapids, Mich.  
"Woman."—She should not be debarred from health-giving field sports.—Elmer E. Shaner, Pittsburg, Pa.  
"Reminiscence."—Gentlemen that come my way.—G. H. Davidson, Grand Rapids, Mich.  
"Chas. Grimm, Clear Lake, Iowa.  
"Machinery."—In the manufacture of Ammunition.—W. R. Hobart, Newark, N. J.  
"Shotgun."—Two barrels and two shots in comparison with one barrel and six shots.—Capt. Bartlett, Buffalo, N. Y.  
"The Known Angles."—William Alden Smith, Grand Rapids, Mich.  
"Live Birds."—J. A. Elliott, Kansas City, Mo.  
"Auld Lang Syne."—Mark Morris, Grand Rapids, Mich.

The banquet was served under the direction of the following committees of the Valley City Gun Club: Reception committee—E. Crofton Fox, Dr. F. W. Temple, W. S. Coleman, J. N. Faulkner, W. O. Woodworth, W. B. Freiligh. Entertainment committee—R. G. Macfie, Frank Jewel, A. J. Brown.

The weather on the third day of the tournament was all that could be asked for, and the programme was finished. The Grand Rapids team carried off the palm in the team work contest, defeating the Sault Ste. Marie team by 3 points. John Parker, of Detroit, proved himself by his average one of the best marksmen of the State.

During the three days of the tournament 18,329 targets were thrown. Following are the scores:

fast right-quarter and a clean miss. Hopper was in hard luck with his birds, which were in most instances hit with both barrels lightly. There were only about three birds that were out of company with the rest; Morfeys fifth, killed at the trap, Hopper's fifteenth, at trap, and Morgan's tenth, a slow incomer which was hit lightly, and retrieved by dog inside of the fence.

No. 1: Mattingly 19, Rothwell 19, Hunter 18, Hopper, Jr. 17, Steele 17, McKelden 16, Wagner 16.  
No. 2: Briggs 20, Dixon 19, Steele 18, Osborn 18, Evans 18, Wagner 17.

**Editor Forest and Stream:**  
The several gun clubs of South Dakota will hold their seven annual State tournament at Mitchell, June 11, 12 and 13. A large crowd of shooters will be in attendance and a spirited contest anticipated. The usual rules will govern the match. NOMINATIONS

Jeannette Jagd Club.

Mt. Kisco Rod and Gun Club.

Mr. Kisco, N. Y.—Spring tournament of the Mt. Kisco Rod and Gun Club is down for June 7 and 8. Open to the world. Shooting begins at 10 A. M. sharp. Any shooter in a tie may withdraw his share of purse. American Association rules govern all contests. Mount Kisco is one hour's ride from New York city on Harlem R. R. F. M. DUNN, Sec'y.

Bath Gun Club.

On June 7 the Bath (Me.) Gun Club will hold their third annual tournament. Invitations have been issued to all clubs of the State. An interstate shoot will be held between the Massachusetts and Maine teams, 5 men, 50 targets per man. J. C. HIGGINS, Sec'y.

Hartford Gun Club.

HARTFORD, Conn.—The Hartford Gun Club will hold a tournament at Union Grove, this city, Thursday, June 7. A Forehand Arms Co. hammerless gun will be shot for at 25 singles per man, open to all. Entrance \$1.50, targets included. The principal event of the day will be the State Challenge cup at 30 singles from 5 unknown traps, and 5 pairs of doubles. This event will be open to Connecticut shooters only. All other events open to all. Programme mailed on application. DAN S. WADSWORTH, Sec'y.

Live Bird Shooting in New Jersey.

It has been reported that the New Jersey Legislature of 1894 passed a bill prohibiting the shooting of live birds from the trap. This report is incorrect, no such law was enacted.

Answers to Correspondents.

No notice taken of anonymous communications

H. W. V., Cincinnati.—In Michigan there is no close time for squirrels. No other game may be shot in June and July.

C. W., New York.—1. Kindly tell me if, in firing a revolver, the ball leaves the barrel before the recoil is felt. 2. Is it not the recoil that often spoils the aim? Ans. 1. The recoil begins the instant the ball starts from the chamber. 2. Yes.

F. J. K., San Antonio, Tex.—Is it the general rule at trap-shooting when singles and doubles are shot at the same meeting to run the two scores together and consider and report the aggregate as a single

score, or are the scores at singles and those at doubles kept as separate scores? Which is the prevailing rule? Ans. The former.

S. R. C., Appleton, Mo.—What is the difference between the standard American rifle target for 200yds. off-hand and 200yds. with a rest, or are they the same? Ans. For rest shooting the bullseye of the standard American target has been still further subdivided by placing two circles inside the 10-circle counting 11 and 12. The diameter of these circles is 2.33 and 1.41in. respectively. The possible is 120 instead of 100 for ten shots.

E. S. O., Kansas City, Kans.—Will you please tell me the derivation and pronunciation of the name of that much talked of fish, the ouaniche? If Spanish it would be pronounced as if spelled wānāneechy, the first a having the sound of a in wander, but I presume that it is not a Spanish word. Ans. The name is from the Montagnais Indian term, pronounced as if spelled whonānishe (all vowels short), and is the French form of the word. See notes on this subject in our issue of April 7, page 294.

E. B., Utica, N. Y.—I have just returned from a fishing trip upon which I caught some splendid trout from a lake which had been stocked with brown trout. It was claimed by those who did the stocking that the fish I caught were of this species and they pointed out various differences between those caught and our speckled trout, all of which could be seen in special cases, but there were no peculiar shapes or colors or markings which I do not think I could match with some brook trout. Have you in your paper ever given the distinctive mark of this fish as compared with the brook trout? Ans. You will find a portrait of the brown trout in our issue of March 24 last. In his "Fishes of Pennsylvania" Dr. Bean writes of the brown trout: "On the head, body and dorsal fin usually numerous red and black spots, the latter circular or X shaped, and some of them with a pale border. A yellowish margin usually present on the front of the dorsal and anal and the outer part of the ventral. The dark spots are few in number below the lateral line. The ground color of the body is brownish or brownish black, varying with food and locality."

**YALE MIXTURE**

A GENTLEMAN'S SMOKE.

WE COULD NOT IMPROVE THE QUALITY if paid double the price. It is the choicest Smoking Tobacco that experience can produce or that money can buy.

MARBURG BROS., BALTIMORE, MD

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where we get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

IT NEVER GUMS OR DRIPS,  
an advantage not possessed by any other lubricant in the world.

An indispensable article for all kinds of Fire Arms, Fine Machinery, Gun Locks, Bicycles, Camp Kits Surgical Instruments, Embalming Instruments, Cutlery, Brass Work on Yachts, Copper and Steel Plate, etc. In all respects the very best preparation for any metallic surfaces where a non-gumming lubricant and rust preventive are required.

# =Polk Miller's= D.O.G R.E.M.E.D.I.E.S.

Sergeant's Condition Pills.....	\$1 per box.
Sergeant's "Sure Shot" for Worms.....	50 cents.
Sergeant's Canker Wash.....	50 cents.
Sergeant's Mange Ointment.....	50 cents.
Sergeant's Carbolic Soap.....	25 cents.

All of the above are "mailable" at prices given, except the "Mange Ointment." That's too bulky, and can be sent by express only. Our pamphlet, which will be sent by mail to any address free, contains the formula for making the ointment. Get the book and make it for yourself.

## TO DOG OWNERS:

I have owned dogs for forty years. I have treated them for every disease described in medical works on the "Diseases of the Dog," and after an experience of thirty-five years of active practice as a druggist in treating 'sick dogs' I have pinned my faith to the above remedies. When I look over the letters from grateful patrons who tell me that "but for your remedies my dog would have died," I am surprised that our orders do not keep us "hustling" all the time. When the men who want to win the prizes at field trials and bench shows are at all doubtful about their success they write us, "Send at once some Sergeant's Condition Pills; my dogs are 'off their feed,' or 'languid,' or 'droopy,' or the 'hair looks dead and dull,' and I want to get them in good trim." They know on which side "their bread is buttered," and in a few weeks we read in the reports from the FOREST AND STREAM that these men walk off with the best prizes.

POLK MILLER.

**Sergeant's Pills**, given regularly to a dog, will as effectually guard him against distemper as vaccination protects the human family against Small Pox.

**Sergeant's "Sure Shot"** is a sure remedy for worms in dogs of any age, but puppies ought to have it anyway, for, worms or no worms, its laxative properties clean them out. They are "gormandizers"—eat too fast and can't digest it—and this remedy steps in to undo the damage which their greediness brings on.

**Sergeant's Carbolic (Soft) Soap**.—I claim no credit for this splendid article. I import it in large drums from England and put it up in small boxes for convenience. It is the only Carbolic Soap I have ever seen that would kill the mangy, musty smell which is so common in house pets when fed by the ladies on a meat diet principally. Dogs washed with this soap regularly, winter or summer, will not have the mange.

**Arsenic and Iron Pills**.—We have a pill, prepared from my own practice and composed of arsenic and iron (one-eighth grain of arsenic and one grain of iron) which I have found excellent in cases where arsenic is desired. They are small and easily administered (can be given in food), and where an alterative alone is needed, there's nothing equal to them. Mailed in boxes at 50 cents per hundred.

These goods are for sale in nearly all of the principal cities in the United States. The following parties buy in quantity and can supply the trade:

A. G. Spalding & Bro.....Chicago.  
 Fanciers & Breeders' Supply Co. Boston.  
 Henry C. Squires.....New York.  
 Von Lengerke & Detmold.....New York.

has placed the FOREST AND STREAM under renewed obligations for his characteristic courtesy and hospitality. The whole country owes him a lasting debt of gratitude and appreciation for his devoted and large-minded service as the public guardian of the National Park.

## RELATIONS OF THE COMMUNITY TO THE FISHERIES.

THE article by Commissioner McDonald on the "Relations of the Community to the Fisheries," which is in course of publication in this journal, should be read and carefully considered by every one who has an interest in the future of our fish supply. Based as it is upon statistics collected by the most approved methods, and covering a long period of time, it appeals with all the force of authority to the judgment of those who seek to know the history and results of fishing operations. There is in it no trace of personal prejudice or selfish interest, but merely a plain statement of facts and the conclusions logically to be drawn from them.

A fundamental principle of fishery regulation is the imposition of such restrictions as are necessary to maintain the fishing industry and no other limitations. In this object the fisherman and the consumer are equally interested. When the conditions of a continuing and successful industry have been established, all should unite in maintaining such conditions without dissension and without unfriendly rivalry.

It is startling to note the change in public sentiment in England since the time of Huxley's recommendation to leave the sea fishing unrestricted—a change paralleled in Ireland and Scotland, and rapidly making progress in continental Europe. Evidently the time has come for earnest study of fishery problems, and it behooves us to enter into them without preconceived notions and with the determination to abide by the truth wherever it may lead.

It will be interesting in connection with this paper to note the results of introducing shad on the Pacific coast where no fish of that kind were found until within the last sixteen years. The entire stock of embryo shad sent to California was not equal to the number planted in the Delaware River in a single season, amounting to only a few millions; yet in 1892 the catch of shad in that State was nearly four times as great as the yield of Massachusetts and five times as many as were taken in Connecticut. Even in Oregon more shad were caught than in Connecticut, and Washington took four-fifths as many as the latter State, while the fish had already pushed northward to Alaska.

Only thirty years ago the Connecticut was one of the famous shad rivers of the East. Eighteen years ago the U. S. Fish Commission was collecting shad eggs at South Hadley Falls. To-day, thanks to the obstructions by dams and pound nets, the shad fishing of Connecticut is valued at only a few thousand dollars, while in more favored streams further south the fishery is fully maintained and probably increasing year by year.

## SNAP SHOTS.

A LARGE amount of money is paid out of the Vermont State treasury for killing bears, panthers, wildcats and foxes. In one town in Essex county eleven bears were killed, bringing to the slayers \$15 a piece as a bounty besides the revenue from the hides and meat. Bears are quite plenty in several of the counties, but it is not thought a wise policy to pay so much in bounties when they would undoubtedly be killed just as quickly if no bounty law existed. A great many people would only like the opportunity to join in one of the frequent bear hunts during the proper season. The same rule applies to the killing of foxes, but as their extermination is a protection to the grouse there is not so much grumbling about it except by the fox hunters who hunt for the love of hunting and not for the paltry bounty. It is the farmer's boy who wants and gets the bounty in most cases.

Probably there are very few more appreciative, enthusiastic and all-around sportsmen than the writer of the "Salmon Notes from Camp Adams," printed in our angling columns to-day. Mr. Adams, now of middle age, is of direct descent from the old Adams stock of Massachusetts. Having by his own energy and ability acquired a competence, he has yet found time to indulge in the health-giving sport furnished by the rod and gun. The

whirr of grouse and Bob White, the whistle of woodcock, the rush of canvasback and the baying of hounds are familiar sounds to his ear; but he is perhaps best known as an enthusiastic devotee of the rod, and particularly that use of it which demands the highest order of skill in the killing of the king of fishes, the "lordly salmon." Early in the seventies Mr. Adams killed his first salmon; and contributed an account of the experience to the FOREST AND STREAM. It has been his good fortune to be able to continue this sport for eighteen consecutive years. Early in his fishing experiences, he has told us, he became convinced that the riparian land owners upon salmon rivers would ultimately be declared by the courts to be proprietors, with the sole right to the products of the waters and consequently the control of the fisheries. Acting upon this conviction, he secured land bordering upon several of the best salmon rivers; the question of riparian ownership, then in the courts, was finally decided favorably to the land owners, and it found Mr. Adams in possession of some of the best salmon preserves in Canada. At present he is co-owner with Mr. Henry Sampson of New York city of the first five miles of the Nepisiquit at Bathurst, N. B., in that reach so well known as the "Rough Water." Thither he has gone this season, and we hope to have from "Camp Adams" a continuation of the delightful angling notes printed to-day. The letter of Lord Dufferin to Mr. John Fottler, Jr., a companion of Mr. Adams at Camp Dufferin, has the true ring of the sportsman's spirit.

Rev. Dr. Charles H. Parkhurst, of this city, whose activity in the work of municipal reform has brought him into such prominence, is an enthusiastic mountain climber. For many years he has gone in the summer to the Swiss Alps, each year selecting some new mountain to scale. Says a writer in *Harper's Weekly*:

It is the one crowning exhilaration of the year, to be looked forward to and back upon with the keenest zest. But he goes about it in earnest, and with the utmost system. He is not a hare-brained climber, and takes no unnecessary risks. He knows his guides, whom he selects with care, and between him and them there is the closest tie of mutual respect and confidence. Having taken them, he obeys them loyally, acknowledging their responsibility and recognizing their authority. Each year also he goes into a preliminary training, that he may execute his task, when he finally assumes it, with safety and with proper equipment. It is interesting to trace in this occupation of vacation days—which is not a pastime, but in the literal sense a recreation—the qualities that have made Dr. Parkhurst so well known. Courage, of course, it demands. The Matterhorn is not scaled by a person, or parson, of flabby nerve any more than by one of flabby muscle. But with courage must go a cool head, a resolute will, and that indefinable faculty for making the best of things, be they good or ill, which is the prime condition of successful climbing of mountains or other difficult heights. It is significant, too, that this quiet clergyman, whose daily life for years has necessarily been of the most regular sort, suggesting relaxation in the study rather than sustained and trying exertion in the open air, has felt the steady desire for the mountains, and has found in them the refreshment that inspired him for the toil of the rest of the year.

Mayor W. B. Merston, of Saginaw, Mich., was expected in Quebec on Friday morning of this week. He was joined by Mr. Robert C. Lowry, of New York, and these gentlemen will proceed to their salmon fishing headquarters on the Grand Cascapedia River, Quebec, from which point it is probable we may receive communications from either or both. They are well-known as contributors to these columns. Mr. Lowry announces that since his experience of last year with the ouananiche at the Grand Discharge of Lake St. John has been so much criticised he has come to the conclusion that he must have encountered an entirely different fish, and perhaps it was not the genuine "leaping" ouananiche at all. Therefore he hopes to try again this season and will probably give the readers of FOREST AND STREAM a second edition of his experience with the far-famed game fish.

In a menagerie in New Jersey, one night last week, a monkey broke loose and dashed itself against the bars of a cage containing two lions. One of the lions seized the monkey, drew it into the cage and made a meal of it. This shows us that even in the darkest hour, when one is hedged about as by iron bars, fortune may send unexpected blessings.

Before the guddlers and the ginnilers shall have set one another by the ears in a discussion of the merits of trout tickling, we appeal to Judge L. B. France or some other authority to tell us whether under any circumstances it would be permissible for a true rodster—that is to say, one of ramrod uprightness—to give over his rodstering and indulge in wig-wazzing for fish on a Sunday night, when the law specifically forbids that practice.

For Prospectus and Advertising Rates see Page vii.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

## Our Yellowstone Expedition.

THE most important achievement of the FOREST AND STREAM's Yellowstone Park Game Exploration was Mr. Hough's prompt and authoritative report upon the work of the buffalo butcher Howell. This report came just at a time when its publication in our columns was calculated to compel attention at Washington and to demonstrate the necessity of immediate action. It opened the eyes of the public and of Congress to the cold hard fact that the National Park game must be protected by adequate provision of law, and the law was enacted.

This result at once lifted the FOREST AND STREAM's expedition out of the plane of ordinary journalistic enterprise and elevated it to the rank of a memorable public service, the influence of which, we firmly believe, will be far extending and long enduring.

The report of the buffalo outrage was given when it would do the most good; it could not have been delayed for its place in the narrative of the trip. An intelligent discussion of the Park railroad invasion and Park segregation schemes has followed; and Mr. Hough has now entered upon the story of the incidents of the expedition in their order. The trip, as is well said, was one of a lifetime. The story is novel and fascinating, and its interest will hold to the end. We congratulate those who by the magic of our Staff Correspondent's pen may follow the FOREST AND STREAM party in the adventures, perils, hardships, pleasures and rewards of this winter exploration amid the snows and geysers and peaks and cañons of the Wonderland.

One fruit of the trip was a notable series of photographs of winter scenery and wild game. The pictures secured by the FOREST AND STREAM party have been supplemented by others very generously placed at our disposal by Mr. F. J. Haynes, official photographer of the Northern Pacific R.R. Some twenty-six of the views have been reproduced and will illustrate the text.

The part which Mr. Elwood Hofer took in the expedition is told in the story itself; we have only to add that without his promised co-operation the trip never would have been undertaken.

Capt. Anderson, the commanding officer of the Park,

## "Forest and Stream's" Yellowstone Park Game Exploration.

No. 5.

CHICAGO, May 30.—In the first article of this series I made the statement that no one except Mr. Hofer had ever made the winter trip through the Park and written a newspaper account of it. Mr. F. Jay Haynes, the well-known St. Paul photographer, who has long been official artist for the Northern Pacific Road, and who has done so much to set forth the beauties of the Park in a pictorial way, calls my attention to the fact that the story of his winter trip, mentioned in my first article, was written by himself and printed in a Chicago paper, *Harper's Weekly* also running full illustrations of it. This I did not know. Mr. Haynes adds that he took with him four men of the unfortunate Schwatka party, and made the circuit of the Park, regardless of trails, and passing over Mount Washburn, as I stated. It was on Mount Washburn that this party were caught in a storm and nearly lost their lives. On that trip Mr. Haynes did not try for any game pictures, but this winter, as I stated last week, he went into the Park again after game pictures, and I hope to show the readers of *FOREST AND STREAM* some of the beautiful results of his skillful camera later on in this story. Mr. Haynes himself being pleased exceedingly with the results in this magnificent and novel field of winter photography—into which I believe the *FOREST AND STREAM* cameras were the only other ones ever to go. We met the Haynes party at the Cañon very pleasantly as I shall later mention.

### Short-Tailed Coats Better.

The Schwatka expedition, as is well known, was sent out by the *New York World*, and it made a magnificent and elaborate failure. Schwatka had along enough baggage to supply an army. He had long-tailed reindeer coats, plenty of furs, sledges, etc., and in short was equipped for an Arctic trip. Unfortunately one cannot sit in a sledge and be hauled by dog team through the Park, because the snow is too soft and it snows too much and too often there, and the hills are too high and steep. The only way to go is by one's own muscle. Schwatka got his big party and all his lumber into the Park just 20 miles, and then he found he had enough of it, and so marched down the hill again. The *FOREST AND STREAM* outfit, the first and only staff party ever to go through the Park in winter, did not wear long-tailed reindeer coats. They only wore short-tailed canvas jumpers, but they got there just the same.

### The Introduction to Ski-Going.

One thing is certain; at the time of which I was writing last week I had never been through the Park in my life. Another thing is certain, and that is that I had never been on *skis*\* in my life. Therefore two startling experiences in my life remained ahead of me.

Billy took me out where the snow was about 11ft. deep and introduced me to a pair of long, low, rakish, piratical-looking things, with a good deal of overhang forward, and—as I learned later—without any centerboard, keel or moral principles anywhere in their composition. You can talk about a vessel being a "thing of life," and "instinct with soul," and all that sort of thing, but she isn't in it with the lowly *ski*, not for a minute. A pair of *skis* make about the liveliest way of locomotion, if you give them a chance, of anything on earth, and if you don't think they are alive and full of soul, you just try them and see. They've got a howling, malignant devil in every inch of their slippery surface, and the combination will give the most blasé and motionless man on earth a thrill a minute for a good many minutes. You don't want to go in for the sport of *ski*-running, not on a hill, anyhow, unless you want to be carried away with it.

Billy started me in on a hill, and I was quite carried away. They dug me out of the snow, somewhere down along the hill, I don't remember just where, and we started back up again, to do it some more. It was then I discovered that a *ski* is like a poor rule, because it won't work both ways. My *skis* had been bright and cheerful when it was suggested that we go down hill, but when we talked about going up hill they became ugly and rebellious. They would slip backward down hill, but wouldn't go up. I began to reflect then that I had 200 miles ahead of me, every inch of it up hill according to accounts, and I was thoughtful.

"Slap your shoe down hard on the snow," said Billy, "and take up all the weight you can with your pole. Lean forward, and don't lift your heel."

Billy is one of the best snowshoers in the mountains, having learned the art while carrying mail for years among the mining camps of Colorado. Moreover, Billy is a philosopher, and disposed to find out the theory of things. Moreover again, he is not disposed to excessive and untimely mirth on serious occasions like this. So, watching Billy, and trying to get close enough to smash him one with the pole if he got too gay, I found I could get up the hill a little by using industry and economy. Pretty soon we came to a steep pitch, which even Billy could not walk up.

"Here we have to 'corduroy,'" said he. "You turn your shoes at right angles to the trail, this way, instead of straight along the way you want to go. That keeps you from slipping down hill. Now you side-step up the hill, lifting the shoe clear from the snow each time. You go right on up sideways, this way, one foot after the another, getting up only a foot or so at a step. Keep your shoes at an angle up the hill, just all the angle they will stand till they begin to slide back down hill, and keep on side-stepping up the hill, on the angle, this way, till you get to where the natural bite of the shoe on the snow will allow you to go straight ahead again. That's 'corduroying.' Some folks use clogs, which they buckle around their shoes. With a clog, you slap your foot down and go straight ahead. You can tie a knotted piece of gunny sack under the shoe and get the same result. It's a nuisance, though, to be stopping putting such things on and off all the time, at every little hill. You will find that the best *ski* runners don't use any clogs, but depend on 'corduroying' up the steep places. Some fellows can go straight up steep hills, without 'corduroying,' where other fellows can't. It's a good deal in the way the shoe is planted down on the snow, and left clinging there with-

out breaking the hold till the other foot has been shoved forward. But any fellow has to corduroy sometimes, and his average in speed per hour depends on his ability to do it fast, without slipping, and without losing anything out of his uphill angle. You want to keep your shoes at just all the uphill angle they'll stand, and you want to side-step as high up hill as you can each time, and you don't want to lose any time slipping back, or plunging, or crossing your shoes, or trying to recover yourself. Just take it easy and regular. Time in snowshoeing is made by keeping at it steadily, not stopping and not taking spurts."

All this was plain enough, and I got up the hill. I found, however, that the awkwardness of using the unskilled muscles required in the work, brought on a profuse perspiration, though it was a cold winter day. It was at

E. HOUGH IN A HEAP.

the top of this hill that I found out I wasn't going to be able to wear my nice new fireman's shirt, because it was too warm.

"You'll find muscles in you you never dreamed of," said Billy, "and you'll find you don't need much clothing while you're on the trail."

### Army Discipline.

Over the hill, I became exalted in spirit, for I had discovered that the way to do was not to lift the whole 10ft. of shoe off the snow, but to slide it along on the snow, letting it carry its own weight, and dragging it forward by the toe strap. I was going at a great gait, like a boy with a new pair of galluses, right along in front of D company barracks, and rather glad a lot of blue-coated gladiators were out watching the tenderfoot learn to *ski*-go, when all at once I learned something more. I got my feet crossed, somehow, and right at the critical moment I went end over end in the snow, with the *skis* fairly braided around my neck in the most extraordinary and inexplicable fashion in the world. The *skis* got away the best of that fall. D company laughed long and hearty, as one man. A company always does that way, I suppose, owing to the army discipline, but I felt like trying to lick D company, while Billy was trying to untangle and unbraided me and get me dug out again.

It would seem easy to get up after falling in the snow, but let one try this in deep, soft snow, and he will find that his hand and arm sink deep down, but afford him no

IN FULL STRIDE—A GOOD SKI STEP.

support when he tries to raise himself. He can get no bearing until he gets above his *skis*, which do not sink in the snow. He must therefore get his *skis* under him, somehow. This somehow is best understood after a wrestle or two in trying to get one's feet untangled and located once more intelligibly. Getting up from a fall in soft snow or a steep side hill is a very delicate operation.

### National Pork.

Billy and I made our way up the mountain side where lies that marvelous geyser formation known as the Miner Terrace. Earth has no mammoth hot spring to compare with this one, whose giant stairway now lay before us, and the year holds no time like that of midwinter to see it at its best. The graded pools rose one above another like jewels on a cloth of white. The snow, yards deep, made a setting for each pool. Out of the pools the water sparkled, boiling hot, cut through the snow, melted the ice, bid defiance to winter. Evidently, nature's plans beneath the surface of the earth were at variance with those about it. The paradox was startling. Billy and I crawled on our *skis* close along the edge of the

giant pools, crossed some of the rocks on foot where it was too hot for the snow to lie, and at length, bracing ourselves from slipping into the hot bath, we stood over 10ft. of snow on a rock which overlooked the ultimate pool, whose blue, scalding flood pours up eternally through an unfathomable crevice in the mountain side. Around us swept the incomparable panorama of the snow-clad hills. Surely the scene was an impressive one and one such as should win forgiveness for a brief feeling of emotion and of sentiment.

I know a fellow oughtn't to "spill over," and oughtn't to "make a scene," because it isn't good form. Yet I hope I should be forgiven for the thought which came to me as I gazed into that ceaseless fountain of red hot water which flows forever, day and night, summer and winter. What a place for Mr. Armour! What a place for scalding hogs!

I commend this thought to those who wish to cut apart the Park, who wish to put railroads through it, who wish to ruin and make common its wonders. It has been suggested that a railroad through the Park would be a useful thing to some few men who wish to carry freight. I believe it has not yet been brought to their minds that the hot springs might be made useful in scalding hogs. By all means let us do away with horses and vehicles in the Park. Let us make the trip in two days. Let us have an electrical railroad, and a grand national pork concern, thus utilizing the hot water nature has evidently provided with the design of scalding hogs. Niagara is harnessed. Why not the Park? National Pork! There is a music in the sound, a similitude in the form, and a close fit in the thought behind the form. It will do for a label. By all means let us have in the railroads at once. And over the gate which lets them in let us have the fitting announcement and the fitting epitaph for the desecrated wonderland—National Pork! Would Congress then know the difference in the sign, and would it then realize what the design of this last instance of national porkism had been from first to last?

### Billy Has Some Fun.

"Come," said Billy, "and I will have some fun with you."

He did, he did, and let no man say to the contrary. He took me through the heavy pines up to the top of a steep rise above the terrace, and politely requested me to follow my leader, saying which, he let go and slid off down the hill like a bird, calling back to me to "keep my feet together and put on brakes with the pole." This I did as nearly as I could, and in a moment, with an ease and precision which pleased us both, I also was at the foot of the hill, but upside down, with the *skis* on top.

"We'll try another one," said Billy, who wasn't near as much discouraged as I was. "There's a pretty swift little pitch over here a way, and you can ride your pole down there."

"Riding the pole" I learned to be sitting astride of it, with the rear end of the pole dropping deep in the snow behind and thus serving as a brake. I was rejoiced to see by this means I could regulate the speed a little bit, so that I didn't feel so much as if I was going to get off the earth. Billy was pleased to be flattering when he saw that I was on top of the *skis* at the bottom of the hill, instead of their being on top of me.

"Now we'll take one steeper yet," said he. "I'll show you the way to do where it's too steep to stand up. Come ahead."

Billy stopped at the head of a sharp little pitch, which was so steep that we couldn't see to the bottom of it. All we could see was a rounded curve of white dropping down, apparently off into the blue substance which the poets call ether. Here Billy unbuckled the straps of his shoes, took the shoes off, put them together, pointed them down hill, and sat down on the middle of the two, on top of the shoe-straps. Then he gave a push or so with his hands, started, gathered speed, and whish! he was over into the unknown, apparently sliding on the seat of his overalls.

As I knew of no way of getting out of there except by doing the way Billy did, I also took off my shoes and sat down on them, putting them carefully in the tracks left by Billy's. I was looking thoughtfully at the carved dragon heads on the ends of my *skis*, and wondering how far off the end of that hill was, when all at once the malignant creatures took a slip and a start and away I went. There was an astonishing slipping past of trees stuck on a broad ribbon of snow, then a feeling of keen exhilaration at the smooth, even flight through the air, then came a second of still more winged flight, clear out into the air, and a smother of something white and soft. The dragon-headed *skis* and the eagle-eyed newspaper man had gone clear over a 30ft. bank of snow, and buried themselves in the soft drift at its base. I had taken my first *ski*-jump, and taken it sitting down, at the take-off and the landing.

"It was steeper than I thought," said Billy, when he could undouble himself from laughing, "and the fact is, I did just what you did. I had to hurry to get out of the drift, or you'd have lit right on top of me."

"Now you've seen the gait," continued he, "and you see how it's done. The rest you'll have to learn from practice. We'll go home now, for you don't want to get too tired at first."

The next day, thanks to a muscular system already in pretty fair order from the training I had gone into preparatory for the trip, I was not so very stiff, though I found the new muscles Billy had prophesied, more especially some north of my knees. The dreadful *mal de raquette* of which I had read in books, I never felt at all. That day we took a rather slow run down the hill to the Boiling River a mile or so, the snow being sticky. This concluded my entire experience on the *skis* before we started on our journey, less than half a day in all. I remember that I thought it a great feat to get down the Boiling River hill. When I saw the same hill, on coming out of the Park after the trip, it seemed a very innocent and tame affair.

### Making up the Packs for the Start.

Wednesday morning, that of our start, dawned bright and fair enough. The two privates, Larsen and Holte, detailed by Capt. Anderson to accompany us, reported in due season, and Billy, as chief pack master, was early busy in arranging the packs we were to carry. Larsen and Holte took absolutely no blankets, saying they would rather not carry them. Billy took only one blanket, and generously insisted on my taking his light sleeping bag, made of wildcat skins, and weighing only about 6lbs. We had also

\* Pronounced *shee*.

a light canvas lodge-lining, about 6ft. by 15ft. Billy's camera, the special long-range outfit made for him by the Smithsonian Institution, weighed 25½lbs. without the plate holders, and made all the load Billy could carry. The holders, plates, rolls of films, ruby lantern, etc., which belonged with this camera, made a goodly part of the other packs. My camera, weighing about 10½lbs., made a good basis for a third pack. We had a light and very excellent camp axe. The men carried their army revolvers. They had in their packs extra socks, and also the warm muskrat skin caps issued by the army, which latter they rarely wore. Billy and I had extra underwear and plenty of socks, of course, and each had a heavy woollen shirt extra, to which I added a sweater. We carried each an extra pair of overshoes, and we were careful to have each an extra pair of colored goggles, an important precaution, for to be without some protection for the eyes in that snowy glare, is to practically go blind. I had along a pair of moccasins in my pack—which I am most thankful I carried in spite of Billy's injunction to cut down weight. Billy had a few screws, in case of a broken *ski*, I had a needle and thread, and we had plenty of wax for the shoes. Of course we had plenty of good matches. We carried lunch enough for two meals, intending to make the soldiers' quarters at Norris Basin, 20 miles out, and to replenish there. We had some tea, the very best we could buy; Billy said we must not drink coffee, but tea, as tea was "better to work on." In this the miners and lumbermen nearly all agree with him, but I am such a coffee drinker myself that I became mutinous after the first day out, and finished the trip on coffee. We had two of the army quart tin cups, the sole dishes or utensils that we carried. As I have said, Billy and I carried no weapon but our scabbard-knives. Item, the men had their tobacco. I put in my kit some such simple remedies as vaseline, quinine, etc., and we also carried a pint of brandy. This was all the spirits we took along, and we had about half of that when

*skis* with a 80lbs. pack on his back and a reputation for dignity to sustain. The worst of it was the snow stuck to our shoes and made it hard going even on the places where we didn't want to slip back any. We paused at the end of the first half hour or so and scraped off our shoes. The day was cold, but we were all perspiring with the work. "Put on your glasses," said Billy to me. "Your eyes aren't bigger than slits in a blanket already. Do you want to go blind? And stop eating that snow. Whatever you do, and no matter how thirsty you get, you must not eat snow. If you get heated up and take one drink of cold water, that knocks you out worse than four hours of work. It weakens you right away. You must not drink between meals, and you mustn't eat snow." This struck me as being hard luck, for just then I would rather have eaten snow than do anything, but I obeyed. We pushed on up the sharp grades the best we could, or rather the best I could, for of course the others could leave me as they liked. We let the two privates go ahead, with instructions to build a fire at the top of the hill, opposite the magnificent Cathedral Rock. They were joined further on by the detail sent out by Capt. Anderson to bring in the poacher Howell, who had just been caught—Sergt. Kellner and two privates, all good shoers. At last Billy and I made the last rise—I'm sure I don't know how—and in a moment more we were beside our little fire, melting snow to make tea. I drank about a quart of strong tea—and nearly met a Waterloo by doing it, for it made me sick. We ate also a bite of lunch, and fixed up our shoes, heating them scorching hot and then rubbing them quickly with wax. Billy showed me how, enjoining me by no means ever to allow a drop of water to fall on either surface of the *skis*, as it would freeze and cause the snow to stick to it. The theory of the *ski* is to slip over and through the snow without dragging any along. It is quite an art to learn all the tricks of *ski* work, and keep-

tainly he helped me through a tight enough place—about as bad an afternoon as I care to put in. On the windy flats the snow was hard and made fair shoeing, and I plodded along behind Billy's shoes methodically enough, and did not really feel so very tired. At the Gardiner River, however, four and a half miles still from the shack, I was taken desperately faint and sick, so that at length I fairly toppled over off my *skis*. I don't know what it was, unless the unusual exertion, combined with the unusual altitude, caused the stomach to resent the unusual dose of bitter tea I had given it. Anyhow, I got desperately weak, and pretty soon I didn't care a copper whether I went anywhere or not. Billy would not let me stop for more than a moment, however, knowing the effects of a chilling through. He fished out the brandy bottle and for almost the only time on the trip I drank a little of it—about a thimbleful was Billy's idea of a plenty. This braced me up a little, but for over an hour I was so weak, and moreover so dull and apathetic, that it seems to me I know how it must feel to be left on the trail. In my belief a fellow wouldn't care much about it, one way or another, if he got much further along than I was. Billy was anxious, I know, for the day was waning, and it had come on to snow most dismally. Worse still, the snow began to stick to the shoes when we entered the dense forest, and it was hard plugging for a man even at his best. We worried along over one little hill after another, not daring to stop long enough to build a fire and wax our shoes. Once in a while we would turn from the trail, tramp a hole down in the snow—which was 8ft. deep on the level here—and sit for a moment resting, with our packs leaning on the snow. Then we would cut a pine bough and rub the *skis* hard with the resinous tips and needles. This would help the shoes for a way, when perhaps we would cut off another bough, throw it on the snow and drag the *skis* across that to cut off the adhering snow, and "slick" the shoes a little. Billy would not let me sit down long at a time, but kept me moving; and at length toward evening I began to get stronger. "It's only three-quarters of a mile further now," said Billy finally. "Can you make it?" "Betcherlife, Billy," I said, making an awful bluff. "Come on, then," he said, and so set out at a better pace. But it transpired that he had feared I could not go even that distance, for it was not a quarter of a mile further before he turned out to the left from the trail, into a deep thicket of pines that fringed a little stream. "Brace up, old man," said he, "we're home now."

#### Home, Sweet Home.

And home it was, a very blessed one, this little shack of rough boards, buried roof deep in the snow which folded the whole forest in like a great white blanket. There was a blue wisp of smoke rising, and there were voices of welcome as we came in sight, and that is the most of home. We learned that Kellner's party had been unable to make Norris quarters that day, owing to the stickiness of the shoeing, and it therefore became necessary for all seven of us to pass the night in the little shack, not over 9ft. square. This, however, we found not an unwelcome prospect. Everything in life is relative. For my part I threw myself down on a board somebody had propped up off the floor, and for over half an hour I knew nothing of what was going on. This might have been sleep, or it might have been sheer exhaustion. I heard somebody say, "That feller's purty tired." Then somebody gave me a warm sandwich with corned beef hash in it, and a tin cup of coffee. This combination saved my life, and pretty soon I got quite peart again. The boys cut a lot of boughs and put down on the floor, and brought in plenty of wood for the old cook stove which Uncle Sam had left in there against just such an emergency as this. Not one of the party but Billy and myself had a blanket, for the soldiers declare they would rather sit up by a fire all night than pack a blanket all day. Billy spread down his piece of canvas and his one blanket, insisting on my taking the sleeping bag, and so we all turned in the best we could, the soldier men squatting, lying or crouching about the stove as the taste and fancy of each dictated.

This ended my first day on the *skis*, and it served at least to teach me what a snowshoe trip through the Park meant, how serious a thing it might become and how impossible help would be in case of sickness or accident. When I lay down to sleep that night I had not the slightest idea that I would be able to travel the next day, for I thought I would be too stiff and sore. I never could understand what the trouble really was, nor how it was that I got over it so easily. Certain it is that the next morning I awoke rested and refreshed, stiff and a bit sore, of course, but only triflingly so by comparison. I got on my shoes all right, and from that time on clear through the trip I never did have any more trouble. I took coffee and corned beef hash in mine after that every time I got a chance, and attribute my later success to those remedies. That one first bruising day—it was a nightmare of a time—made the beginning and the end of the grief. After that the art of shoeing grew easier and easier every day, and the trip more and more delightful. But I have not yet forgotten how Billy stayed with me when I was disposed to lie down and join the golden choir.

The men who first reached the Swan Lake Flats that day saw four elk off to the right of the trail. No other game was seen.—Billy and I noticed elk pawings in the snow on the hills north of the Golden Gate, but no very large band was indicated.

The thermometer went nearly to zero that night.

#### Some Out-of-Print Books.

We receive frequent inquiries for books on sport which have been published a good many years ago and are now out of print, and therefore only to be obtained by accident. On the publication of "American Big-Game Hunting," the book of the Boone and Crockett Club frequent inquiry was made as to where some of the books mentioned in the article on "The Literature of American Big-Game Hunting" could be found, and to all such inquiries we were obliged to respond that many of the works referred to were out of print. Recently we have had an opportunity to pick up in England copies of "Hunting Grounds of the Great West," Dodge, and "Carolina Sports," Elliott, works which stand high in the literature of American outdoor life. With these we have secured Lamont's "Yachting in the Arctic Seas" and Flack's "A Hunter's Experience in the Southern States of America." All of these are second-hand books and sold as to the copies, so that they would have to be rebound, but except for this the volumes are complete. They are offered at the following prices: "Hunting Grounds of the Great West," \$5; "Yachting in the Arctic Seas," \$5.50; "Carolina Sports," \$3; "Hunter's Experience in the Southern States of America," \$3.

A SKI OUTING PARTY IN THE PARK.

From a photo by Haynes.

we got back, thus establishing a marked difference between our own and the Schwatka outfit.

The above, with a most scanty allowance of toilet articles, constituted all of our simple baggage, yet one will be surprised to learn that made up into four packs it made each pack weigh between 25 and 30lbs. Billy, one of the most experienced packers in the mountains, soon made up two solid, oblong packs for the soldier boys, adjusting them with soft whang leather carrying-straps. Billy had a carrying harness—and an abominably stiff and awkward one, too—attached to his camera. Sometimes I carried that camera to give Billy a chance for his life, and I always wished the Smithsonian man who invented that harness had it around his neck. For myself, in spite of Billy's entreaties, I stuck to the Lake Superior pack bag, made in Duluth, which I had in long trips through the pine woods previously found so roomy and so easy to carry. This bag was made of heavy canvas, and weighed 3½lbs, but its straps, "tote" strap (the head strap by which alone Indians will carry a pack) and shoulder straps are put on this bag so understandingly that one can carry additional weight and not feel it as he would with ordinary straps. We found this bag handy for the loose small articles. Of course, being not new at packing, we carried our packs lying well down along the spine, so that shoulders and hips shared the weight. We found a breast strap, of leather or gunny sacking, passed across the front and pulling the shoulder straps a trifle together, made the carrying easier. For this I usually engaged my silk handkerchief. We all carried strips of gunny sacking at our belts. Billy had made two sets of snowshoe clogs. We carried these three miles and threw them away.

#### Off.

At 9 o'clock the last pack had been lashed, the last strap adjusted, the last grunt of protest uttered by the human pack train Billy was cinching up, and we were on our way up the first slopes of the great Golden Gate hill, beyond which lay the wonders and the trials of the wild region of the upper Park. The journey was on. Since I was a boy and used to lie awake all night before the days when my father was going to take me with him on a fishing trip or camp hunt, I can not remember ever to have felt so keen a thrill of curiosity and anticipation as I did then. In anticipation it was the trip of a lifetime, and in the realization it proved all and more than I had hoped.

#### Trials of the Narrow Pass.

The Golden Gate hill rises about 1,500ft. or so in three and a half miles, and it isn't so awfully particular how it does it, either. It is the terror of the soldiers and scouts who have to snowshoe in the Park, and is considered about the hardest climb in the Park. Certainly it constitutes a delightful place to break in a greenhorn on the

ing the *skis* in order is one of the most important ones.

Travelers through the Park will remember the rock cut, the trestle and the bridge just below the entrance of the Golden Gate proper. Above the wall of rock rises straight up and on the left as one ascends the mountain side drops sheer off into the cañon which makes down below the Cathedral Rock. This is a pretty bit of road in summer. As we saw it there was no road at all, but a drift of snow filling the road 30ft. deep. We had to leave the road at a point above the trestle, take off our *skis* and make our way the best we could along the mountain side, climbing up steps cut in the snow to the point right at the last little bridge, under the rail of which we crawled. Then, after this ticklish piece of business was over, we put on the *skis*, pushed around the corner, ran up the last faint rise and lo! before us lay the wide and storm-swept plain of the Swan Lake Flats.

Big white mountains hemmed in this high plateau—Electric Peak, Sepulcher Peak, Joseph Peak, Quadrant

Mountain, Antler Peak, Trilobite Point, Mount Holmes; all these could be seen standing sentry. White Mount Washburn, highest peak of the Park, could be seen far off in the wild central region of the Park. We could even see over to the Yellowstone range toward Cooke City. Certainly it was a most impressive landscape and rendered not the less forbidding by the stalking pillars of snow which went in procession across the wind-swept plateau which made the near foreground.

#### A Friend in Need Is a Friend Indeed.

Billy now told me that he had eight miles more to go before we could make the Crystal Springs "shack," the only practicable stopping place this side of Norris quarters. It was so late, and the shoeing was so bad, that he had given up all hope of making Norris that night. He added that the eight miles was not so hard as the three miles we had just passed, and bade me be of good cheer. Larsen and Holte, whom we found to be excellent *ski* men, as befitted their Scandinavian ancestry, Billy advised to go ahead and turn in at the Crystal Springs, as we did not wish to hold them back. They hit off a swinging gait at that, and were soon mere specks on the other side of the flat. Billy could have kept up with them, of course, but remained with me, who equally of course could not go such a pace my first day on the *skis*.

If Billy had not stayed back with me, it is very probable I should never have gotten into camp that night or any other night. That he did so was only what he would in mountain honor consider himself bound to do, but none the less the fact that he did has always left a soft spot in my heart for Billy, and a feeling that if he were in a tight place I should like to stay with him in turn. ## Natural History.

### STORIES OF EZRA.—II.

#### Shooting a Loon.

SOME time after the wood duck episode we went up North Coon after squirrels and saw a speckled loon on one of the still reaches of the river. As he was a new bird to us, we determined to get him, and he afforded us a great deal of sport, for we shot at him twenty-one times, at distances varying from 35 to 50 yds. It looked as if the loon enjoyed it as well as we did, for he made no effort to get away, but swam about in a most tantalizing manner, keeping his body submerged, and when Ezra fired at him I plainly saw that the neck and head were under the water before the shot got there. Ezra finally killed him by hiding, while I kept in sight and acted as though trying to get a shot. Ezra said it was taking a mean advantage of the loon, but it had been having lots of fun at our expense, now it had to furnish us some.

#### The Sandhill Crane.

It being nearer to go home across the prairie than to follow the river, we went that way, and came across four boys who had winged a sandhill crane, which they had driven into the corner of a field. After looking at the crane a few minutes Ezra laid down his gun and said, "I'm going to catch that animal." After a good deal of maneuvering for a good opening he caught the bird by the neck, but did not have time to let go before it planted both feet in Ezra's face and threw itself 10 ft. from him, leaving his face with three or four furrows plowed in it, from which the blood ran in streams. Wiping the blood from his face he picked up his gun, and making a bow to the crane said, "Excuse me, but I don't think it will be profitable to continue this interview with you," and walked away.

In the high grass down in the sloughs we stumbled on to a young "sandhill" not quite able to fly, but able to make very good use of his legs in trying to escape, and good use of his bill after he captured him. By the time we got him home he seemed to realize that we were not going to hurt him, and the next day was willing to eat grasshoppers and various kinds of leaves and roots from a near-by pond, and within a week was, as Ezra said, "well broke" to eat wheat and corn.

He staid with us for three years, having the liberty of the town, and living in peace with everything except the country dogs, who generally had a go at him, as they were trained at home to chase the wild ones off the newly sown wheat fields. A dog never went for him the second time, for Dick, as we called him, didn't take a back seat for anybody's dog, and as the dog rushed at him Dick stood his ground, and when the dog got near enough, that sharp bin. bill of his was aimed at the dog's eye, and most always got near enough to send the dog howling for his master's wagon.

In the summer Dick spent most of the day walking about the village, very much like a policeman; but in cold weather his favorite position was standing on one foot, with his head tucked under his wing, and his standing places were where the wind blew strongest. I thought perhaps he selected the windy places because they reminded him of his native prairies, but Ezra said he stopped in the windy places because there was where he got cold, and stopped right there to warm his head and one of his feet. I've often seen him standing thus at the corner of a house where the wind came in irregular and wicked puffs, but have never seen him blown off his balance, although standing on one foot, and doubtless fast asleep.

In the spring many wild cranes flew over the village, and Dick saluted them with loud trumpeting and many grotesque dances and wing flappings, occasionally taking short flights as if to join them, but never leaving town. The wild ones often answered his call, but never made any move to decoy to him.

The second spring, Dick was very much excited over the arrival of the wild ones, and was watching for them most of the time. We expected he would go, but did not feel inclined to prevent him, as we knew his life with us was lonesome. We feared, though, he would be shot if he went with the wild ones, and we put a band of red flannel round his neck, hoping it might protect him. One moonlight night he was heard trumpeting at a great rate and in the morning he was gone. Two weeks later a boy came in from the prairie, saying he had shot a sandhill that "had a piece of red flannel round its neck and hadn't a darned bit of sense." "Poor Dick," said Ezra, "you found that captivity was irksome and liberty was death. I don't blame you; death is preferable to captivity."

O. H. HAMPTON.

#### Woodchucks in Trees.

WILLINGTON, Conn.—While driving one September day through a strip of woodland, our beagle, Sancho Panza, surprised a woodchuck sunning himself in the wheel rut, and the little creature bounded out of the road and scrambled up an oak tree some 15 ft., well out of the way of the dog, and as he clung by his funny little toenails he turned his head first on one side and then on the other, and looked down at the barking dog, and then at us as we sat in the carriage, in an appealing way, as much as to say, "I have done my best to escape from peril, now, have pity." In telling of this remarkable incident several old farmers said that although unusual, as a last resort, when hard pressed, a woodchuck would run up a tree, but when the impetus gained by running was lost, they seemed unable to climb further.

ANNA A. PRESTON.

#### Buffalo in Texas.

SAN ANTONIO, Texas, June 9.—There is no longer any doubt about the existence of a large band of buffalo in the hills of Val Verde county, for they have been seen for the third time this year. This time it is Mr. Philip Thornton, a ranchman of Val Verde, who arrived in San Antonio on the morning of June 2. Hearing of his arrival and the news he brought, your correspondent had a personal interview with the gentleman, which developed the fact that he ran across quite a large herd of buffalo last week in a valley of Val Verde county near the Rio Grande border. The section is a very wild one and the fertile valleys thereof afford excellent pasturage for the animals and the hills afford them protection from the cold northerners. The

herd was grazing in one of the valleys which is completely inclosed by hills.

Mr. Thornton says that the herd numbers fully fifty head, and noted quite a number of calves. He was very careful to fix the location definitely so that he can make a more thorough investigation of the matter at some future time.

O. C. G.

#### Babes in the Woods.

THE following pathetic incident was told to your correspondent by Doctor Weis, of Central City, W. Va.: John Evans, of Howard county, Mo., had a hen that made her nest in the woods and hatched a brood of chickens. She was left to bring up her family without human aid, as all sensible hens in the forest can do. But the kind mother was taken sick or was killed soon after maternity. She was found dead, nearly a skeleton. The chicks, quite well feathered, were playing around her. At night they sought shelter as best they could under and around their dead parent. For many days and nights they must have done thus, procuring their own food, and perhaps wondering why mamma slept so long. The chickens were caught and taken to the farm yard.

N. D. ELTING.

## Camp-Fire Glimpsings.

"That reminds me."

#### A Remarkable Duck.

A PARTY of us were sitting around the camp-fire after a day's trout fishing, when the conversation turned on the remarkable tenacity of life exhibited by some animals, and some stories were told of wounded deer which ran miles after being shot through and through.

"There is no animal which exhibits such wonderful powers after receiving a death wound as a duck," said a well-known judge of one of the inland counties, who was familiarly known as "Rusty." "Why, some time last fall while hunting on the Montezuma Marshes with a companion and two boatmen, we found long shots so much the rule that one of the men loaded with buckshot, and shortly afterward fired into a flock of pintails passing high overhead, so high in fact that the other man remarked, 'What a fool! them's a mile high.' But presently we noted one duck falling behind the flock and beginning to slant downward in his flight. We kept our eyes on him and marked him down a mile away in an open field. We had no difficulty in finding him, stone dead, with his wings spread, and it is almost beyond belief, but that duck had flown a mile with a No. 3 buckshot right through his body just behind his forelegs."

The cheers, shouts and laughter with which this statement was received may better be imagined than described, and the expression of surprise, doubt, confusion, and finally comprehension, which chased themselves across "Rusty's" countenance would have made the fortune of any painter who could have reproduced them. S. A. C.

#### An Adventure with a Lynx.

GRANBY, P. Q.—I have been going to tell you about an experience with a lynx for some time past, but have only now found the time. Some of your many readers may have had somewhat similar experiences and written it up in a less truthful manner, as I have read some pretty tall stories from time to time in old FOREST AND STREAM.

The fact of a lynx being in this part of the country is enough to scare a good many of the rural inhabitants, as it is only the "oldest inhabitant" who can remember when they were at all numerous.

On last Good Friday I drove out a few miles to visit a brother, and while there a couple of farmers dropped in to talk about the lynx.

It appears that a week or so previous a man they called Lively took a short cut one night through pasture and woods for a couple of miles to reach his home, and the next day had a big story to tell of how he had been followed by a big animal, that from his description was set down as a lynx. Although he was not molested he vowed it would be a long time before he would go back on the old adage that "the longest way round is the shortest way home."

His story was not generally believed, but a few nights later a respectable farmer with his wife and child in the sleigh were driving home, and passing a small strip of woods they were startled by an unearthly yell. The wife was much scared, but the husband said it was Ben (a half-witted fellow that makes his home wherever night overtakes him), trying to scare them, but that he would show him he could not scare him; so he answered back the yell as nearly as he could imitate it, and you can imagine their consternation when almost immediately the lynx bounded into the road a few feet ahead of the horse.

It was a bright moonlight night and they at once remembered Lively's story. The man grabbed the whip and stood up in the sleigh and made the horse do his level best for home, which was only about 300 yds. The wife clasped the child to her breast, expecting every minute that the lynx would be bounding into the sleigh to take it from her, but when they arrived at the house with no lynx in sight the man's courage came back. He called his brother-in-law, and one taking a rifle, the other a shotgun they set out to the edge of the woods to challenge the brute. It was but a short distance and our two heroes bravely went along until near the woods, when the husband said he would give a yell, and when the lynx showed up they would both shoot him so as to make sure. He accordingly gave the yell and immediately it was answered from behind a brush heap a few feet to one side. This so surprised them that without stopping to think, much less shoot, they both started for the house, and as they remarked after, they had no idea they could run so fast.

The lynx track was seen from time to time after, and they were talking about several of them getting together some night and watching for him, after having put out some carcass for him to feed on.

A few nights afterward I found myself at the east end of the village, and having an errand at my father's, thought I would cross lots through a pasture coming out at the back of the barn. It was a dark, cloudy night, threatening to snow, and before I got half way across it commenced to blow hard with a fine sleet driving into my face, which caused me to pull my cap well down, and stooping forward I breasted the storm.

The lynx story must have left an impression on my mind, for when within about a hundred feet of the last fence I thought if he now turned up all I had to defend myself with was a jack knife, and almost at that instant I heard an unearthly yell coming from a sand knoll a hundred yards or so to my left. I made for the fence on the run, my heart thumping fearfully and a cold sweat breaking out all over me, my hair seeming to stiffen out and stand on end, and was just straddling the fence when the lynx came running after me. I saw him plainly about ten feet from me, where he stopped up as if waiting till I got down off the fence. You can imagine my sensations better than I can describe them. I can remember making a move to bring my other leg over the fence to run for it, when that terrible lynx up and barked. I immediately recognized him as my father's dog, when I made the remark, "You blamed fool dog, how you did scare me." And then I awoke with a cold sweat on me and my flesh feeling like No. 3 sand paper.

J. BRUCE PAYNE.

## Game Bag and Gun.

### A MEMORY OF CAMP YOCUM.

ON Oct. 27, 1887, fifteen hunters with a complete outfit left Duluth, Minn., on the tug Rambler, Capt. Yocum, and were landed on the south shore of Lake Superior, at Cranberry River, 40 miles east of Duluth. The company was mostly from Grand Rapids and Ionia, Mich. On the first day's hunt the party had venison for supper, and the club had as good a cook as could be found in Michigan. The party were in camp 17 days and killed about a dozen deer, nearly all large ones, besides ruffed grouse and hares. The gray timber wolves used to serenade us at night at times, and not far away there were bear, lynx and other fur animals there and brook trout in the river, and pickerel at the mouth of the river. We killed bucks that would weigh 225 lbs.

We did not see a white man from the outside world nor hear a word from the outside world for the seventeen days that we were there, and there was no one living in that valley at that time. There is a dam at the mouth of the river now, and the Cranberry Lumber Co. have cut more than a hundred million feet of timber there since, and everything has changed in that vicinity.

Two logs about 1 ft. in diameter and about 30 ft. long were put in the large tent and small saplings about an inch in diameter were nailed across about 6 ft. long, then fine spruce bars were put on about 10 in. deep and three bedticks filled with hay (the tug brought down a half ton of hay for that purpose) and then the bedticks put together made a bed say 30 ft. long, and three heavy woolen blankets were spread on top of that. Douglass had his music with him and he can discount any brass band in the country; he was the life of the camp. There was one hunter dubbed Leather Stocking; he could outrun a moose, and when he got in a shot with his 38-55 you could count on game. The last that I heard of him he was out on the Bitter Root Range in the Rockies, and if he has not got old Ephraim's scalp in his office I am mistaken.

We saw one buck with a head on him like an elk, and he must have weighed 300, but he was a little too smart for us and carried off his rocking chair. Capt. Billy was in command of the squad and he was a royal good fellow. Nov. 14 at sunrise, Capt. Yocum's old tug Rambler blew her whistle, while we were eating our breakfast, and then all was hustle and hurry until the tug was loaded. But the Rambler sleeps on the bottom of Lake Superior, and the old captain that ran her so many years has crossed the river. A more generous and accommodating royal old fellow never turned a wheel in a pilot house. The writer has spent hours with him in the pilot house plowing our way through the dark night and storms on old Lake Superior. Peace to his memory. There never was a more jolly company of hunters camped on the shores of Lake Superior, and they voted it the best hunt of their lives.

ZENITH.

### "COME TO MONTANA."

BILLINGS, Mont.—In perusing the article of "F. W. G." in the issue of May 12, and comparing it with others that have appeared at various times in the past, wherein the writers have given a description of their outing, the questions arise in my mind, "Are people divided into separate and distinct classes, as are the fowls of the air? Are some constructed with webfeet, that water and mud in unlimited quantities are essential to the thorough enjoyment of a pleasure trip, and where good shooting and fishing is a secondary consideration, a fair bag the exception, and pure air and beautiful scenery are not in it? Or is it ignorance of a better locality that confines them to the watery, game-deserted districts, and enables them to extract only a very small amount of pleasure from a long, tiresome and generally expensive trip? Should my first query be correct, to those I will say, remain with your proper element, derive all the enjoyment from it you can, we have no place for you, and a waterfowl is neither graceful nor a thing of beauty when transferred to dry land.

To those of the second class I extend a hearty invitation to come and try an outing in some one of the many beautiful camping and hunting grounds of Montana. This is an ideal country for the pleasure and health seeker. In the autumn our climate is unsurpassed; rain seldom falls, the air is balmy and health-giving. Our ever green mountains abound with game of all kinds and in every tumbling stream trout in unlimited numbers can be taken. One need not move camp to keep the larder well supplied with venison, bear, grouse and trout. Our scenery, while not so grand and rugged as that lower down the range in Colorado, is all that one could desire, beautiful enough in detail to satisfy the most exacting, and the supply and change is inexhaustible. To those who are consumptive or run down and debilitated through close application to or "chained to business," I say come to Montana, take a few weeks sojourn in her mountain retreats, and when you return to your Eastern homes 'twill be with the feeling that you have at last made the discovery for which De Soto searched in vain. Outfits and guides can be hired very reasonably, or, should one prefer there are oftentimes opportunities of joining local parties making up for a few weeks in the hills, I will endeavor to reply to all correspondents

requesting information and will here say that I have no financial gain in view, but appreciating a good thing of this kind, when I possess it am willing others should share it also.  
E. M. HUNGERFORD.

### The Jury Dined on Venison.

ST. JOHNSBURY, Vt., June 4.—Vermont papers frequently report through correspondents from towns in various parts of the State, that deer were seen feeding with Mr. Blank's herd of cows, or were seen to cross a certain highway, or unwelcome news, that a wounded deer was seen, etc. It is a fact that deer are increasing very rapidly, and are not confined to one particular locality. The laws for their protection are stringent, and the penalty for killing one is \$100. It is well observed in most parts of the State, but in Essex county and occasionally in Caledonia county the deer law is violated by from ten to twenty hunters. These men all live in sparsely settled communities and are a law unto themselves. The Fish and Game Commissioners assisted by the State League have this year been investigating the rumored violations, and the result is that several indictments may be expected against persons residing in both Essex and Caledonia counties. It is rumored that a town grand juror is one of the gentlemen who will be called upon to pay dearly for his venison. A former justice of the peace is another lover of venison who should pay for such luxuries. Indeed, we might name a relative of one of our State's attorneys, but it will not do to be too hasty. People in the back towns in Essex county are not in favor of a continual close season on deer, and therefore it is difficult to secure evidence against any one. Many law-abiding citizens who would not personally violate our existing law maintain that it cannot be enforced, but that a short open season for three or four extreme northern counties would secure the co-operation of all citizens to enforce the law during the close season. Most of these sportsmen would not advise dogging deer at any season.

An illustration of how the law operated a few years ago when there was no State league may be described as follows: A certain young man, the proprietor of a saw-mill in one of the back towns, during one of his visits to the mill, killed a deer. He was prosecuted by the State's attorney before a local justice of the peace and called for a jury. During the course of the trial all adjourned for dinner. As there was no hotel in the town the jury boarded around like the "school marm." Three of them stopped at a certain house where the defendant and his lawyer also stopped. A part of the deer which was the cause of the trial was served to all at the table. After a hearty dinner of venison the jury heard the case and were unanimous for acquittal. While public sentiment has changed somewhat in the past six years, it is necessary to look after the witnesses very sharp, and select a jury in order to convict in a violation of the deer law in some towns in Vermont.  
WHEELLOCK.

### Locust's Kazoo and Bob White's Call.

WILLOW SPRINGS, Mo., June 1.—Loveliest weather here that ever was on sea or land. The seventeen year locusts are here on time, and there are seventeen quadruples of quintillions of billions of them, too, and you can't hear yourself shout unless you get close up, on account of the everlasting "kazoo" they carry. Or, no, it's only the males that are so provided. I was explaining this to a friend who was ignorant of that fact, the other day, making an objective lesson of it, when he said very impudently, as though he had suffered offense, "I wish they were all females." What a "consummation devoutly to be wished." No more locusts.

Quail are whistling on every hand. It is very pleasant to step out of doors "at 5 o'clock in the morning" when nature is at her loveliest, bedewed and fresh, cool and invigorating, and listen to Bob White from a dozen throats calling and answering to each other. It is pleasantly suggestive of an autumn to come. I hear of young turkeys having been seen not far away, and I want to be there when they get ripe.  
O. O. S.

### The Sioux Game Raid.

LINCOLN, Neb., June 2.—Editor Forest and Stream: An Oelrichs, S. D., dispatch reports: "Red Cloud, the famous chief of the Sioux Nation, with the following-named Sioux Indians, Slow Bear, Back B-ne, Jack Red Cloud, Moccasin Top, He Dog, Little Shield, Good, Broken Arm, Kills at Night, Paints Yellow and Hollow Wood, who, with their families, made a party of about 50, came into town to-day from the reservation and traded quite extensively with local merchants, after which they departed on their way to the Shoshone Reservation, near the Yellowstone Park, where they go on a 50 days' hunting expedition." What encouragement is there for white men to observe game laws, simply to help keep up the supply for the red men to slaughter in season and out of season?  
E. E.

### For Killing a Doe in May.

A WELL-KNOWN broker, long connected with the military of the city, was arraigned in the Police Court this morning before Judge Desnoyers and charged by the Fish and Game Society with a violation of the game laws. The society was represented by Mr. E. A. Cowley, its secretary, and Mr. Charles Raynes, advocate. The specific charge consisted in shooting a doe during the close season at Trout Lake, near Labelle, on May 25. The accused pleaded guilty and was fined \$80. The society are determined to have the fish and game laws observed, and are taking measures with that purpose in view. The dynamiting of fish is also to be done away with.—*Montreal Star*.

### New Jersey Game Protection.

THE Farmers' Game Protective Association of Bergen County, N. J., has bought and distributed in that county this spring 800 quail and 74 hares, distributed as follows: Hackensack and East Hackensack, 8 dozen quail, 44 hares; Ridgewood, 3 dozen quail, 10 hares; Westwood, 3 dozen quail, 10 hares; Tenafly, 3 dozen quail; River Edge, 3 dozen quail; Oradell 3 dozen quail, 10 hares; Cherry Hill, 1 dozen quail; Spring Valley, 1 dozen quail. Very stringent measures have been taken to enforce the game laws and have violators (including all non-residents) arrested.—*Evening Post*.

### Illinois Quail.

DECATUR, Ill.—I am positive that we have not had as fine a prospect for quail shooting in central Illinois in years as we have this season. The weather was unfavorable for shooting last fall and this spring has been particularly favorable for breeding—no heavy rains and an early spring. Driving in the country, while attending to professional business, I have been struck by the great numbers of the birds I have seen and the farmers report them in great numbers.  
M. H. F.

### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

## Sea and River Fishing.

### THE BIG TROUT OF MAINE.

THE Maine fishing parties are many of them returning. Trains on the Maine Central and Boston & Maine railways are bringing in the returning fishermen every evening. The train to reach Boston at 9:30 P. M. Monday had one parlor car completely loaded with trout fishermen, among them the Governor Russell party, just out from Mr. John E. Thayer's camps at B. Pond, where they had been for fly-fishing. The party was made up about as usual; ex-Governor Russell, Hon. John E. Thayer, Eugene Thayer, J. O. Wetherbee, Hon. John F. Andrew, Governor Russell's brother, Colonel Eustis Russell, Hon. John Simpkins and others. It is rumored that they had rather poor fishing, their trip being early and being attended with very bad weather. Most of the members of the Camp Stewart party also came out from Richardson Lake on Monday. With this party fishing was very fair. The ladies all caught large trout. Mrs. Parris took a 4½-pound trout. Mrs. Moody, as usual, took several large fish. Mrs. Stearns hooked and landed a 3½-pound fish. Mrs. Farley was successful with trout running up to 3lbs. and slightly above. W. K. Moody landed a 5½lb. trout, just as a hail storm had ceased, which storm covered the ground until it was white, and set the water boiling. The theory is that it takes some commotion of the water to stir up the big trout. Mr. Parris landed a handsome trout weighing full 5½lbs. This was his first experience in fishing at the Rangeleys, and his delight may be imagined. He is a lover of trout in Massachusetts, but up to this season he has been in the habit of considering a 4lb. trout a monster. He fears that his taste for catching small fish is spoiled. As luck will sometimes run, Mr. Farley's trout were all rather under size for that region, though showing a handsome average of fully 1lb. weight. Mr. Stearns and Mr. Holt both caught trout something above 3lbs., and Mr. Kempton had two above 3lbs. weight.

But the glory of being high line indeed fell to Mr. Geo. T. Freeman. That gentleman staid in camp for four days after the other members of the party had left, to be in company with Mr. C. H. Johnson, of Mattipoisett, Mass., who had been unavoidably hindered from joining the party till about the last day. They fished rather leisurely for the three additional days they remained. Mr. Johnson took 28 trout, one 3lbs., one 3½lbs., and all over 4lb. weight. The last day they fished they spent on the stream till toward nightfall, when their guide, Mr. Geo. H. Cutting, rowed them down the lake some distance. Mr. Freeman had a strike. In a moment he was aware that he was a big one. It would not give an inch of line, but rather kept taking it. When nearly 100ft. of line was out the fish came to the surface, jumping full length into the air. Then they were sure they had a big trout. It took almost an hour to land the fellow. When secured he was found to weigh plump 7lbs., was 7½in. deep, and 3½in. through the back. He was only 23in. long, however, showing him to be a wonderfully plump fish. Mr. Freeman is a happy man, and has received hosts of congratulations; his friends feeling much pleased to have him take a big fish, by reason of his genuine goodness of heart and kindness to others in camp. The fish was displayed in Appleton & Bassett's window on Friday. Lying on the great fish was a little yearling trout, not over 4in. in length; an idea of Mr. Freeman, to show "Fishing in Massachusetts and in Maine."

Mr. Chas. Z. Bassett has just returned from an extended fishing trip. He had splendid luck at Kennebago, landing a 5lbs. trout on a fly with several of a slightly lesser weight. Mr. Bassett has been wonderfully successful as a fly-fisherman, even earlier than most of the sportsmen have considered it of any use to expect large trout, except from trolling. He landed several large ones last year on the fly, while all the other fishermen were "dragging minnows," and the same thing was true of two years ago. With his friend G. N. Smalley, he first fished Cupsuptic Lake at Billy Soule's. Then he went to Kennebago with the resulting success mentioned above. From that point he made an extended trip to Parmacheene, and there he fished Boy Falls, but with rather poor success. He found many of the Parmacheene Club in camp, but having only indifferent success. He made a trip down to the Meadows, fishing Magalloway faithfully, but taking no large fish. From that point he came back up the river and across the carry to Cupsuptic again.

Mr. Lamb, of Providence, a guest at the Mountain View House, and for some years a visitor to the Rangeleys, caught a trout there the other day weighing 7½lbs. By some one of the members of the Tuttle party a trout weighing 9lbs. is reported to have been caught. Mr. E. L. Pickard, of Auburndale, is out from his visit to the home of the Oquossoc Angling Association at Indian Rock. His daughter accompanied him, and both had good fishing. Mr. Pickard is a true specimen of the genuine angler, as well as business man. SPECIAL.

### "Rodster."

"RODSTER" is a good word, with a suggestion of rippling fern and willow-lined streams, as roadster reminds of long stretches of country highway over hill and through dale.  
ANNA A. PRESTON.

### TROUT TICKLING.

DENVER, Col.—Catching trout by hand is a very common practice, but so far as I know only when on the spawning beds. I have done it with the Rocky Mountain trout, Eastern brook trout, and the rainbow or California trout. On May 19 this year I saw a dozen or so good-sized rainbow trout in Waterfall Creek, a small stream running into Wellington Lake, in the mountains fifty miles west of Denver. I lay down carefully and pushed myself slowly along on the bank until opposite, where they were quietly lying in about 8in. of clear water. I put my hand down slowly and passed my fingers along from the tail under one of the largest until I reached the pectoral fins and raised her out of the water without trouble. Of course I had to hold her firmly as she made a violent struggle after I closed my hand around her, and she weighed at least 2lbs. She was really in the act of spawning, some of the eggs dropping while I held her in my hands. I have seen the male fish caught in the same way, but my experience is that it is much easier to take the female.

I remember reading some years ago an article in your paper from the pen of Hon. Wm. N. Byers, of Denver, giving an account of taking by hand, in this manner, all the trout needed for food by his party, when camped in the Middle Park. The fish could not be induced to bite at fly or bait, but the guide took all they needed by hand from the small streams where they were spawning.

I think the files of your paper will show similar experiences by others; but I feel sure this can only be done when they are spawning.  
H. M. ORAHOOD.

"E. M. B." asks for information about trout tickling. I can assure him that such a thing can be done, but doubt very much whether it was ever done in the way that "E. M. B." describes, viz., in open water. When a boy in Scotland, I often did it and saw it done by others many times in the following manner: In summer, when the streams are low, we would commence wading up stream, driving the trout before us. Of course they would run for the nearest hole, under a large stone, rock or bank, wherever they could find a hiding place. Now was the time for tickling, or as we called it, "guddling." Insert the hand cautiously, and if you are lucky enough to touch the trout near the tail, it will lie perfectly still while you worm your fingers along its belly until you reach the gills. Then you close on it with a snap like a steel trap. I hardly think it can be done with trout lying in open water, for you know how quick of sight trout are, and would never allow any one within arm's length if able to see and move at will. You will no doubt readily believe me when I say that I think this is a very reprehensible practice, and one to be frowned down at all times; it has not been done by me since long before I commenced reading FOREST AND STREAM, and I have read it from the first number.  
ESK.

FLORENCE, S. C.—In your issue of June 2, your correspondent "E. M. B." asks for corroboration of the "trout tickling" story. I am glad to relieve his mind as to his having been "stuffed" by some fishing Ananias, as this mode of taking trout is very common among the small boys in Scotland, and when young, I often indulged in the pastime. Our mode was a little different from what he described. The "tickler" usually selected a small stony brook when the water was low and waded up stream; wherever he found a little deep hole round a larger stone he would gently insinuate his hand under the edge of the stone and if he happened to feel the touch of a trout he would pause. The fish would generally move a few inches and come to a halt. At the second touch the trout would generally stand his ground, when the "tickler" would slowly move his hand up toward the middle of the fish, and then gently tickle the stomach. Almost at once the fish would lean slowly over till his side would be resting against the fingers. A quick tilt and he lay on the grass. This sport is locally called "ginniling," and has long been practiced. I am of the opinion, from the way the trout "leans to it," that he rather enjoys the tickling.  
W. M. B.

CHICAGO, Ill.—In reply to "E. M. B." in FOREST AND STREAM of June 2, I wish to add my testimony, corroborating that of a correspondent of the Norwich Bulletin, with reference to trout tickling. I fully believe his statement, for I have taken many a speckled beauty in the rivulets of Wales in the same manner, while yet I was a chunk of a boy. I am now nearly 70 years old and still love to catch a fish. For that purpose I shall leave Chicago this day at 5 P. M., for the Lakes of Wisconsin, to follow the bent of my inclination.  
H. B. J.

UNADILLA, N. Y., June 3.—I read the article on tickling trout to several members of the club, and out of seven present, five knew from actual experience that trout can be captured in that way, and two knew of the practice from hearsay.  
TIANADERHA.

### St. Lawrence River Fishing.

ALEXANDRIA BAY, June 2.—I was invited down to the dock where laid the steam yacht Ione, under charter for the season by Mr. Howell Osborn, who has just returned from a fishing trip down the river, and was shown a fine catch of bass. There were seventy and their weight was 70½lbs., which was a good average. Although some weighed as high as 4lbs., most of them were kept alive in a large minnow tub. This shows how our fishing is improving with the protective laws well administered by one energetic game protector who is ever on the alert and bringing the violators of the game laws to answer before the courts of justice. Several of our summer residents are arriving for the season. Yesterday brought Mr. Michael Chauncey, of Cuba Isle; Jas. T. Easton, of Cherry Isle; A. E. Clark's family are at their summer home on Welcome Isle. Mr. W. C. Browning is expected Tuesday, also J. L. Hasbrouck, the owner of the original Seth Green Island with the house that Mr. Green occupied thirty years ago; it has been kept as a dining hall for his party, which is usually large. With our excellent fishing and inviting scenery we hope to see a large number here this season. The water in the St. Lawrence is now nearly 1½ft. higher than last season and is on the rise, which makes the shore of the islands look beautiful. Later on will note more of the fishing interest here.  
W. H. THOMPSON, Sec'y.

## FISHING ON THE SHENANDOAH.—I.

A STRAY, tattered leaf from some New York sportsman's journal—the name being torn off—was recently handed me by a friend, who called my attention to a short article which began thus: "One of the best objective points for anglers, to my knowledge, is Staunton, Va. From there conveyances can be had to Shaver's Dam in Rockingham county or Clifton Forge, a resort of President Cleveland for bass a couple of years ago. The White Horse, within fifty miles of Staunton, is another celebrated place for bass." The writer is entirely correct in his assertion that Staunton is a fine objective point for anglers in search of good bass fishing, however he may err in some of his other statements, for President Cleveland did not fish at Clifton Forge, but at Eagle Rock, some 15 or 20 miles below that place, and the White Horse is nearer 100 miles from Staunton than 50 miles.

Staunton is not on any fishing stream, and the nearest good fishing points are from 15 to 25 miles distant; yet, owing to its central location, with the fishing streams all around it, and all of which are readily reached from Staunton, either by rail or by private conveyance, its good hotel and livery accommodations, and its excellent railroad facilities, both through and local, it offers peculiar advantages as an objective point to the Philadelphia or New York angler in search of good fishing within reasonable distance.

Excellent trout streams abound in the mountains at distances varying from 25 to 75 or 100 miles away. These, of course, are accessible only by private or livery conveyance, as the trout, like the deer and other game, flees before the approach of civilization.

The upper James River and its tributaries all afford fine bass fishing and may be readily reached by rail from Staunton to Clifton Forge, Lexington or Balcony Falls. The Potomac is a bass teeming stream, particularly in the more inaccessible mountain reaches of the South Branch and its tributaries which may be reached from Staunton by livery conveyance, while the entire length of the Shenandoah stretches away invitingly to the Potomac, 126 miles away by rail, any part of which is within easy reach by rail or livery conveyance from Staunton, and in any part of which the angler is liable to find good fishing when the water is right.

As I have cruised and fished the Shenandoah so often, I am, of course, more familiar with it than with most of the other streams mentioned, and therefore feel better qualified to speak of its many good fishing points.

The Shenandoah is an ideal bass stream, both for the bass and the bass fisher. Its swift water, its rock-ribbed bed, with its myriads of reefs and ledges; its deep cool pools and bright sparkling shallows, make of it a paradise for bass; while its accessibility, its entrancingly beautiful mountain scenery, its bracing healthful climate, its freedom from malaria, its pure, sparkling waters, make it equally an ideal stream for the bass fisher.

The bass are quite numerous in the stream, particularly in the more remote and less fished portions. As a rule, they rise readily to the fly, although with the usual uncertainty of this peculiarly capricious fish, in some localities I have never yet had a rise while taking them freely with bait.

With the liability to imperfection which is the lot of all things terrestrial, the Shenandoah has one serious drawback as a fishing stream, viz.: its tendency to get muddy after a heavy rain. The surface wash from the red clay soil of the well tilled fields along its banks, speedily converts it into a stream of liquid mud of a vivid brick red, which tint sometimes remains in the water long after the thick mud has run out, with a persistency most aggravating to the patient fisherman. On this account, therefore, probably the months of August, September and October, with the latter part of July, will be found the most favorable seasons in which to essay the river.

The nearest good fishing points to Staunton are Crimora or South River (a tributary of the Shenandoah), fifteen miles distant, Hoy's Dam on Middle River (another tributary), fifteen or sixteen miles away, "Polk" Rippetoos (Scott's Ford) on North River, Shenandoah, on South River, both eighteen miles from Staunton and about a mile and a half apart; and Port Republic, at Junction of North and South rivers, twenty miles from Staunton, at which point the beautiful Shenandoah begins. These places are all easily reached from Staunton and all afford good fishing, the last three in particular, lying, as they do, within from one to three miles of each other, offer special inducements to the angler, including fair hotel accommodations.

Shaver's Dam, seven miles below Port Republic, is a favorite resort of Harrisonburg anglers and is best reached by livery from that point, which is an hour's ride by rail from Staunton. Elkton, Bear, Lithia Springs and Shenandoah are all good points, easily reached by rail from Staunton, and all afford good hotel accommodations.

Kemple's Falls is a favorite fishing place of mine, and may be reached from Stanley, a station on the Norfolk & Western Railroad. This road runs parallel with the river for its entire course, for many miles directly along its banks, good fishing points are easily reached from any of its stations.

Luray and Front Royal, both of which are on this road, afford good hotel facilities and command large reaches of the river accessible from either of these points by livery.

The entire stretch of river between Shenandoah and Riverton (one mile from Front Royal) at the mouth of the North Fork of Shenandoah, some 65 or 75 miles in all, running as it does back along the flanks of the Massanutten Mountains, and through a section of country not thickly settled and remote from towns of any size, affords particularly good fishing, as it is not fished as much as the more accessible parts of the river. Accommodations can readily be secured at almost any of the better class of farm houses along the river, information in regard to which can be obtained at Luray or Front Royal.

Riverton has always been noted as a great fishing place. Lying as it does between the two rivers, it commands an extensive reach of both. Both streams have high dams in them, beneath which the bass love to congregate, and as these dams are the first ones in the river above the Potomac, the fish are frequently very numerous here. Owing, however, to its popularity as a summer resort and its proximity to the big summer hotel at Front Royal, the immediate vicinity of Riverton is usually fished to excess, and better fishing is apt to be found a few miles further up either river or down below the confluence of the streams.

There are always fish here, however, for I recall one evening a couple of years ago when George and I were camped on our old camp ground right at the end of the big dam in the south fork, or main stream, at the end of one of our annual canoe cruises. I was tired from the day's cruise and did not care to go away from the camp, so I rigged up my tackle, and with a few helgramites fished from the dam into the deep, swirling waters immediately beneath, while George rigged up his fly tackle and went half a mile down stream below the confluence of the two rivers. From where I fished I could see at least twenty men and boys fishing all along the dam and from the rocks in the rapids below for 100 yds. or so; yet in thirty minutes I took five nice bass, and could have taken more, but that my supply of helgramites ran out; while George returned in an hour with eight or nine fine ones taken with the fly.

The Shenandoah below Riverton is a most beautiful stream; broad, deep and majestic, broken by frequent long, rocky rapids, and good fishing is found in any of its reaches, perhaps the most noted places being the Boatmen's Lane, the White Horse (both of which are reached from White Post station on the N. & W. R. R. and but a mile or so apart) and Castleman's Ferry. This place is five miles from Berryville (on the R. R.) and may be readily reached from there by daily mail hack. Good accommodations can be obtained here at Mr. Maurice Castleman's.

Shannondale Springs, right on the bank of the river, five miles from Charlestown, commands an unusually fine fishing ground, and is quite a resort for anglers.

A good hotel is sadly needed in the business portion of Harper's Ferry, but good accommodations may be secured at the several different hostleries located on the heights back of the town. A magnificent reach of fishing grounds is accessible from here for miles up and down the Potomac and up the Shenandoah (which here unites its limpid, sparkling waters with those of the Potomac).

The angler will undoubtedly find better fishing some miles away from the town; as, owing to its railroad facilities (it is on the main line of the great B. & O. R. R.) and its unrivaled, world-renowned scenery, the place is a popular resort and is much fished in consequence.

From an extended acquaintance with the Shenandoah as a fishing stream, I am of the opinion that perhaps one of the most all-round favorable locations for the angler, all things considered, is at Bear Lithia Springs, in Rockingham county, about forty miles by rail from Staunton. This is a quiet, unpretentious little summer resort of a type quite numerous in the mountain regions of the Virginias. It has a capacity of about sixty guests, and like the others of its class, is much frequented by those whose means or inclinations lead them to avoid the more pretentious gay and high-priced resorts. It is readily reached from Staunton by rail. The manager, Mr. W. K. Compton, is himself an enthusiastic angler. Boats and guides are at hand and bait can be procured in abundance, and the reach of river commanded by the springs, from Elkton to Shenandoah—some seven or eight miles—with its beautiful alternation of deep ponds, rapids, reef, etc., is an ideal fishing ground, and one I have frequently fished over with rare sport.

The best bait is a small species of catfish, or bull pout, locally known as the "mad tom," which can be caught in abundance in almost any of the small side streams with a small seine and a lantern (it is a peculiarity of this little fish that it can only be found after night). Minnows, of course, are always good, but the "mad tom"—in addition to being if anything a more attractive bait—is so tough and hardy that it will outlive half a dozen minnows. It must be handled with care, however, as a stab from one of the vicious little thorns or stickers concealed in the fins on either side just back of the gills, and on the back, is as painful as a bee sting, and the little fellow is so slippery that it is difficult to grasp him without coming in contact with his horns. Helgramites are also excellent for bait and are found in abundance in the river in the shallow, swift water under the rocks, and are readily taken by means of a small-meshed landing net, by turning over the rocks and holding the net below as the rock is turned and scooping in the creatures as they loose their hold and roll up into a little ball, to drift away with the swift current. COY. MOORE.

[TO BE CONCLUDED NEXT WEEK.]

## HONEYOYE FALLS, N. Y., ANGLERS.

HONEYOYE FALLS, N. Y.—*Editor Forest and Stream:* The Honeyoye Falls Anglers' Association held their third annual contest June 1. Notwithstanding it was the wettest, drizzly, cold, gloomy, dreary kind of a June opening on record, the club broke all its former records as fishermen in every respect. Honeyoye Lake and creek, Hemlock and Conesus Lakes, and Lima ponds were the waters fished in; also a private pond in Bloomfield furnished a score and won a prize, which will not be allowed another year, and would not have been this year had it been on the losing side. The following is the list of members who returned a score:

Points.	Points.
Capt. A. Mather..... 47.5	Capt. C. Seaman..... 308.5
W. Lay..... 177.5	A. Croone..... 241.75
J. Burton..... 57	Rev. H. Dennis..... 82
J. Lapp..... 160	Frank Sheldon..... 95
F. Lock..... 245.75	A. J. Tinkler..... 313

	E. Brooks..... 33
	Total score..... 2,390.

Thus Capt. Chas. Seaman's side wins a supper at the expense of the other side by a majority of 701½ points.

Captain Seaman's side had 97 lbs. and Captain Mather's 76½, the winners having 20½ more pounds than the losers. Captain Mather's side won 17 prizes, Captain Seaman's side 16 prizes and the club silver badge. There are six ties on first prize for largest variety and four ties on second for the same. There are three ties on the smallest score. Ties are to be settled among the men tied in any manner they hit upon.

The man who brings in the largest score at the annual contest wears for one year the silver badge of the club. Joe Shellman with a score of 438.5 points wears the badge. It is a good thing that Joe is a good, strong, able-bodied man, for we have a badge that makes one think of a policeman, and indicates the man who wears it, as well as a fisherman, a man not to be badgered much. Pike, brook trout and muskallunge prizes were not won. Ties unsettled. The following are the prize winners:

1. Largest score lake trout—Fred Lock, 1st and 2d.
2. Largest score black bass, straight goods—Fred Lock 1st, S. Wilton 2d.
3. Largest black bass—Frank McKeon 1st, Thos. Lovell 2d.
4. Largest score made—Joe Shellman 1st, Sam Wilton 2d.
5. Largest fish caught—Frank McKeon 1st, Thos. Lovell 2d.
6. Largest score rock bass—Wm. Lay 1st, Frank Sheldon 2d.
7. Largest number pounds caught—Fred Lock 1st, Sam Wilton 2d.
8. Largest score bullheads—Joe Bartlett 1st, Sam Wilton 2d.
9. Largest score perch—Joe Shellman 1st, Louis Gates 2d.
10. Largest variety fish caught—Ties on both prizes.
11. Largest score pike—Not any caught.
12. Largest score sunfish—A. Lyman 1st, S. Wilton 2d.
13. Smallest score brought in—Ties.
14. Largest score mullet—John Tinkler 1st, E. Brooks 2d.
15. Largest score suckers—Joe Shellman 1st, Joe Bartlett 2d.
16. Largest score brook trout—None caught.
17. Largest score pickerel—Will Lay 1st, Dean Martin 2d.
18. Largest black bass caught with fly—Fred Lock 1st, John Lapp 2d.
19. Special prize for the largest trout caught—Fred Lock. This prize is an exchange. Mr. Sheldon gives the flour and Mr. Lock loses his trout.

## SCORE AS FOLLOWS.

Points.	In.	Points.	In.
Lake trout..... 60	14	Rock bass..... 5	6
Brook trout..... 35	7	Pike..... 40	14
Sunfish..... 5	5	Black bass..... 20	9
Mullets..... 8	10	Pickerel..... 20	12
Suckers..... 10	10	Perch..... 7	7
Whitefish..... 25	12	Bullheads..... 10	9
Muskallunge..... 40	12	Black gills..... 8	6
Chub..... 8			

Heaviest fish caught, 75 points, not to be counted otherwise; also 5 points to be added for every pound of fish.

Very appropriately a Honeyoye Lake fish won the badge and the contest. The date of the supper is not yet decided, and an account will be sent in when it takes place. DR. D. G. BROWNE, Sec'y Ex. Com.

## NEWS FROM THE FISHING WATERS.

PARKSIDE (Henryville), Pa., June 6.—Streams in good condition. Trout taking the fly with a snap; caught 53 yesterday afternoon, 12 of them over 11in. long. W. C. HENRY.

PROVIDENCE, R. I., June 4.—I have just returned from Fort Myers, Fla., where I had some magnificent tarpon fishing. My score for the trip was 35 tarpon; total weight, 3,794 lbs.; average weight, 108½ lbs.; largest fish, 160 lbs. and 6ft. 7in. long. Largest catch in one day, four tarpon. Mr. G. R. W. Armes, who fished with me, caught 50 tarpon. F. L. G.

SYRACUSE, N. Y.—Decoration Day Mr. John Soldan, of this city, took 12 lake trout and 13 bass in the afternoon in Skaneateles Lake. Bait for trout, phantom minnow; the bass were taken trolling with worms.

Trout fishing has been the best for twenty years. This is owing to the fine work done by Special Protectors E. D. Crisley, Jeff Brown and State Game Protector Morrison Hawn, and the continued stocking by the Commissioners. Lake trout from this lake always have sold at 25c. per pound, being so plentiful, they now being only 10c. per pound.

Oneida Lake fishing before the heavy rains started in was better than in fifteen years. Many catches of pike and pickerel, from 75 to 100 lbs., have been made. So far the fishing has been at its best near Constantia.

River fishing has been as yet not good. All indications are that fishing will be better than for years, which is the result from stocking and good protection.

I receive the usual number of inquiries from readers of FOREST AND STREAM where to go fishing in this section, which I will gladly furnish the anglers. HENRY LOFTIE.

GRAND RAPIDS, Mich., June 8.—Trouting is reported very good in all the Michigan streams, and more big trout are taken than at any previous time. A rainbow trout of 3 lbs. which had been planted in one of the streams here, was taken by a rodster the other day. ALEX. STARBUCK.

## Tailless Trout.

WHILE on a visit to my old home in Scotland, a few years ago, I made a trip to the island of Isla, where through the courtesy of the owner, I enjoyed some rare trout fishing. While in conversation with one of the keepers, I was told of a little lake high up in the mountains which abounded in a very strange variety of trout. They were described to me to be much like other trout, except that they were tailless. Closer inquiry corroborated my informant, and so near as I could find out the tails have the appearance of having had their soft rays trimmed off. The lake is very deep and the bottom seems to be covered with small sharp-edged fragments of brownish looking stones—the native say the fish wore their tails off rubbing against the sharp stones. Unfortunately my stay on the island was about over, and as I had not an opportunity of personally examining these strange trout, I dropped a good pinch of salt on the story and let it pass my mind. During the spring of last year, a very estimable old gentleman (and I am sure a thoroughly truthful one), arrived in our town from the Island of Isla, where he had been land steward for twenty-five years, for the Campbells of Isla. While in conversation with him the tailless trout again came up, and he positively assured me it was so. I now thoroughly believe it, and would like to hear from some of our more deeply versed as to why and the wherefore.

I leave here on the 5th inst., to try my luck among the trout of western North Carolina, and will let you hear of my success. W. M. B.

FLORENCE, S. C.

## Mr. Arnold's Trout.

NEW YORK, June 4.—Will you kindly state that the brook trout taken by Mr. Francis B. Arnold in the Rangleys was five pounds in weight. I have obtained the measurement and weight from Mr. Arnold, and know that he is entitled to the record of having taken a five-pound trout. CLEVELAND D. FISHER.

SALMON NOTES FROM CAMP ADAMS.

BOSTON, Mass.—Last year was my eighteenth consecutive season of salmon fishing and the most enjoyable one of my life. It was spent on the St. John River, at Gaspé, P. Q., and I am now in the delights of anticipation of this year's sport. I have for months been counting the weeks, and now the days when I shall once more drop the cares of business life and seek the rest and recuperation which to me more than all else camp life affords.

I have made the taking of salmon with a fly something of a study in a practical sort of way during these years. I have long entertained the idea that the particular kind of fly used was of comparatively little consequence in killing salmon, but I had never had the courage to risk my catch during an entire season in the employment of only one kind of fly until last year. That season I fully made up my mind I would make this trial, and with the following results.

I selected as my fly the Jock-Scott, a fly familiar to all salmon fishermen; and with the exception of a change in size depending on the state of water, clearness, etc., all my fish were caught with this fly. I believe that at any time during my outing of over three weeks I could not have taken a single additional salmon with the use of a different fly, which I could not have taken with this fly equally as well.

I also met with my usual success and killed my share of the fish. I am therefore satisfied that the kind of fly in use is of very little consequence in taking the *Salmo-salar*.

The temperature, the clearness of the water, the temperature of the atmosphere as well, the ability to place a fly lightly upon the water so that this king of all fly-fishing can readily take it, tend more to success than the fly cast.

I am willing to go further and hazard the opinion that I should have met with equal success had I made my casts with any one of the leading salmon flies now in use

years I have occasionally landed my fish without using even a landing net. Last year I went still further and absolutely "failed" or beached all my fish. But of course it is a necessity that the fish be thoroughly "tired out" before you lead him to the shore, as you do, "head on" where your man stands ready to quietly and surely take him by

BIG CHAIN POOLS, NEPISQUIT.  
Belonging to Messrs. Adams and Sampson.

the tail and push him out of the water, when he soon receives his *coup de mort*—a proud moment in the life of a salmon angler.

The gaff has always seemed to me a cruel and unsportsmanlike method of landing a half-spent fish, or any other, for many times the salmon comes within reach of the gaffer when he is only half killed, and the struggles of this powerful fish at such times rends and tears his beautiful sides, seriously marring his beauty. Besides, one loses, as it seems to me, the delight and satisfaction of watching his final struggles almost at one's feet. This, to my mind, is the most delightful and satisfactory moment in the whole rôle of fishing.

I suppose it is now generally conceded that salmon in fresh water take little if any food. I have never found in their stomachs the least indication of food. Yet I believe they rise to a fly for the sole purpose of tasting the dainty morsel prepared for them by the fly-tyer and deftly placed within their reach by the angler.

I am quite well aware that in salt water estuaries and in rivers, and even where the water is brackish, salmon feed, but in purely fresh water I believe the food taken is infinitesimal.

The salmon angler, who has never found in his river the beautiful grilse (or three-year-old salmon), or only in very limited numbers at least, has missed some very rare sport. For I do not believe that for its weight, say from 3 to 5 lbs., there is to be caught in fresh water a more gamy fish, a more stubborn fighter than this "chicken salmon" as he is sometimes called. I say "he," for I have never known nor seen a female grilse; and I have examined personally and instructed my cook to do so several hundred of these beautiful fish. The Nepisquit, at Bathurst, New Brunswick, is a noted grilse as well as salmon river. And the opportunity for making a study of the grilse here can not be excelled in American waters.

CAMP DUFFERIN.  
St. Johns, Gaspé, P. Q.

In some seasons they are very plenty indeed, and I have known a single rod to kill in a day's fishing twenty-five.

In looking over my record of dates of the arrival in fresh water of these fish, I am surprised to note how little difference there is from year to year. Supposing the first one caught to be among the first arrivals, July 1 is the average date, and two days either side make the extremes.

Very much has been said and written regarding the return of salmon from the sea to their spawning grounds; if they return annually; if each river has its own peculiar fish; if the parent fish return practically to the same location in the river.

In the Nepisquit, where I have fished for many years, I believe they return every year. I am also one of those

who believe they return to the same location in the river, and use the same spawning bed from year to year, if their lives are spared.

I believe it is now generally admitted that each river has its own distinctive fish. There is no mistaking a Nepisquit salmon. For several seasons I have fished in the different rivers emptying into Gaspé Basin, the St. John, the York and the Dartmouth. The fishermen, guides, buyers and handlers of fish, who have lived here all their lives, refer with great unanimity of opinion to the distinctive features of each river's fish.

Another remarkable fact in this connection may be mentioned, that although for quite a number of years there has been planted a large number of young fry in all three rivers from the Government hatchery upon the Dartmouth, and taken from fish caught in that river which average in weight many pounds heavier than those caught in the St. John, yet the St. John fish at the present time average about the same weight as those taken in years past. There has been no appreciative increase in weight. The natural conclusion, I think, would be that the planting of the progeny of a family of larger fish would increase the average weight of the fish so planted in a river where they run smaller in weight.

What does it prove, if anything? Do these fish after they go to the sea return to the river in which they were hatched, or, what is more probable, never go to the sea at all? In other words, that artificial propagation does not accomplish the great results claimed for it in these rivers. I say natural conditions are the best. Neither would I discourage the effort to restock depleted rivers. I have little doubt that it can be done—being done, but it needs the hearty co-operation of all mill owners, land owners, sportsmen, fishermen, and favorable action and assistance from both State and National governments.

I have no doubt that the distance which the salmon are obliged in some rivers to traverse, like the Restigouche, before reaching the spawning grounds, influences their annual return. In such rivers many kelt or spent fish are

CAMP ADAMS.  
Rough Waters, Nepisquit.

caught. Undoubtedly these fish remain in fresh water over the winter. In the Nepisquit I have never caught or seen but one such fish. I hope that in the near future this question may be definitely settled. It seems to me it could be without much difficulty by simply tagging a certain number of spawning fish; and at the same time other important facts could be determined.

I should hope, however, that some care would be exercised in the use of tags attached to each fish, giving year and weight, and not as the story goes, when one of our fish culturists, finding himself short of tags, made use of a small tin whistle; this fish is recorded as having returned the next year to his native river, not, however, increased in weight, but the tin whistle had grown to a fog horn.

There has of late been some discussion regarding the distance from tide water, salmon will or will not rise to the fly. In my experience I have found they will take the fly when and wherever there are resting places or pools suiting their purpose, and the temperature of the water sufficiently low.

As I have before remarked in this article, sixty degrees is the high limit and I do not think that distance from the sea has anything whatever to do with it in our Atlantic coast fisheries.

Some of our pools up on the Nepisquit at high tide are influenced by backing up of the fresh water, and it frequently occurs that as the water recedes salmon are left in these pools and readily take the fly.

Let the conditions of the water be favorable, let the salmon angler know how to cast his fly, and unless salmon have been for a long time in fresh water the angler will be rewarded with a rise, no matter how far from the sea his lordship may have traveled.

This leads me to refer to the time that is taken in the ascent of salmon rivers by these fish. I suppose the flow of water and its temperature determine to a great extent the rapidity with which salmon pass up to their spawning grounds. If there is high water they climb along much more slowly, resting longer in the pools and the sides of the river. Then again, the ascent is much more difficult in some rivers than in others.

The Nepisquit, for instance, is a very difficult river for salmon to climb. It has many falls, carries, or portages, as the guides call them. It requires, at some seasons, several days for these fish to arrive at the Grand Falls, so-called, which are located some twenty miles from tide water. Yet I have killed at these falls salmon so lately from the sea that attached to their sides was the *Pediculus marinus* or sea louse. It is claimed these insects leave salmon after having been in fresh water not over two days. I do not, however, believe that salmon in this river make the ascent usually with anything like the rapidity which such a theory would indicate.

One thing is certain, a fish just from the sea affords much greater sport than one in the river any great length of time, and I have found that fish caught in rivers where

CAMP ADAMS.  
Rough Waters, Nepisquit, at Bathurst, N. B.

instead of the Jock-Scott; such as the silver-doctor, black-dose, fairy, popham, Curtis, Hanson, or any of the thirty odd different flies which I always take with me on my salmon outings.

During my salmon experience I have kept a record of the number of fish taken, their weight, pools taken in, and the flies they were captured with. I have always kept a daily record of the temperature of the water and three times a day of the atmosphere—morning, noon and night. Also any other interesting facts, such as the running of salmon, the date of their arrival in fresh water, the coming of grilse, which in some rivers are quite plenty, particularly in the Nepisquit, where I have fished for a great many years; also the arrival of sea trout, and other details. I have found when the temperature of the water is 60° and above, that it is hardly worth the while to cast for salmon, unless it is in a pool where the water is very rapid, broken or rugged in its flow.

I have also made it a point to do little if any casting at such times, particularly if the sun is shining upon the pool; even if the temperature of the water is right I avoid casting when the sun shines, as much as possible. I believe also that it is unwise to make more than two or three casts over the same fish. If the fly is properly placed and the salmon is in the mood to rise, he will do so at the first cast.

I am also of the opinion that it makes little difference at what hour of the day the casting is made, if the sky is overcast or cloudy; and I believe that the early morning fishing is not productive of better results than that later in the day, say eight o'clock in the morning, and for evening fishing, five to eight, or even half-past eight. Last year I hooked a salmon after nine o'clock, Quebec time. And I have frequently hooked and killed salmon so late in the evening that it was impossible for me to see my fly as it dropped upon the water. I simply knew that the direction was right, and was careful (as I am always, for that matter) to keep my line and cast straight or taut in the water, that my fish, if he rose to the fly and took it, would hook himself.

I very rarely strike a salmon; it is only when I feel the tug of the fish that I set my hook firmly and surely into such portion of his mouth as it may have caught—I do this perhaps more decidedly than most fishermen, as I prefer to lose a lightly hooked fish at once, rather than later in the fight.

For quite a number of years in landing my salmon I have used a landing net made especially for that purpose. This net is made of common 18-thread twine, 3 or 4 in. mesh and about 3 ft. deep. It is the same size at the bottom as at the top, and is attached to a bent ash, and when rigged is egg-shaped and about 2 ft. in diameter, all well fastened to a stick about 6 ft. long. This is large enough and strong enough to hold the largest salmon.

I discarded the gaff years ago, and during the last few

the water is rapid afford very much more sport than in those of sluggish current. A Nepisquit salmon, for instance, often leaves the water completely several times before he is landed, while a Restigouche salmon, I am told, rarely leaves the water until he is lifted out by the gaffer.

I had intended in this paper to have given my experiences in camp life, arrangements of camps such as I have built upon the Nepisquit and the St. John at Gaspé; some things we eat and drink, and how we cook them; about rods, lines, flies, reels, leaders, fly poisons, their applications, and some other points, but this article has already assumed larger proportions than I had anticipated, so I must leave these to the future.

I cannot refrain here from publishing for the first time a charming letter from Lord Dufferin, in answer to one written him by my associate upon the St. John's, Mr. John Fottler, Jr., of Boston, and which explains how our camp was given its present name, "Dufferin Camp," Lord and Lady Dufferin having camped here some five years when he was Governor-General of Canada about fifteen years ago.

BRITISH EMBASSY, PARIS, Oct. 19, 1893.—Sir: I hasten to acknowledge the receipt of your letter of Sept. 30 and to express to you my best thanks for your kind thought in sending me photographs of our old camping ground on the St. John's River. I am delighted to find that it has fallen into the hands of so sympathetic and excellent a sportsman, and Lady Dufferin and I have been very much touched by your giving our name to the camp. I hope you will have there every season the same happy time that we had during our stay in Canada. The St. John's is a most charming river, and my brother-in-law and I once caught forty fish there in a fortnight, excluding Sundays. My smallest fish was 23 lbs. and the biggest 32, the average being 27. One could not wish for anything much better than that. Pray remember me to Mr. Curtis, of whose hospitality on the occasion of our visit to Gaspé, my wife and I have a very grateful recollection. With renewed thanks, I have the honor to be, sir, your obedient servant,  
DUFFERIN AND AVA.

I believe I cannot close this paper to my mind more satisfactorily than by quoting from a recent poem of James Whitcomb Riley, published in the May number of the *Cosmopolitan*. It cannot fail to touch the heart of any older fisherman at least, substituting the Brandywine for his own native stream:

Up and down old Brandywine,  
In the days 'at's past and gone—  
With a dad-burn hook-and-line  
And a saplin'-pole—I swam!  
I've had more fun, to the square  
Inch, than ever anywhere!  
Heaven to come can't discount mine  
Up and down old Brandywine!  
Up and down old Brandywine...—  
Stripe me with pokeberry-juice!—  
Flick me with a pizenvine  
And yell "Yip!" and lem me loose!  
—Old now as I then wuz young,  
'F I could sing as I have sung,  
Song 'ud shorely ring dee-vine  
Up and down old Brandywine!

I. W. ADAMS.

## ANGLING NOTES.

### Are Maine Ouananiche Landlocked?

A FRIEND and correspondent asked this question: "Are any of the Maine ouananiche absolutely landlocked, or can they all reach salt water and return again if so minded?"

I replied that originally all the Maine ouananiche had free access to salt water, and were as free to return to the fresh water where they were found, but as he used the present tense in his query I would be obliged to ask Mr. Charles F. Atkins as to the present condition of things. Mr. Atkins writes me as follows: "Before man's interference the way was open to all landlocked salmon of Maine to go to sea and to return to their native streams and the lakes they frequented. In recent times, and indeed at present, the way is still open for them to go to sea, but their return has been hindered by dams on every river where they are naturally found. In each case I think it will be established that there have been periods of years when it was impossible for them to return, the dams being insurmountable.

"Fishways have been constructed on all the rivers in question, and thereby all of them have been for part if not all of the time for the past 20 years reopened—so that in some instances the sea salmon have ascended as far as the haunts of the landlocks, but I have no evidence that the landlocked salmon have used the fishways—they may have done so to a limited extent, but I have not heard of it. They do not descend in sufficient numbers to warrant us in looking for their return. I am not aware that the descent of any of them to the sea has been observed, but it is reported that they do, at the spawning season, descend from Sebago Lake into the Presumpscot River, and if so we might expect them to return via the fishway at the outlet of the lake.

"It is a matter of tradition that many years ago, say 40 or 50—it was not uncommon for landlocked salmon to be taken further down the St. Croix and the Presumpscot than in former times but I never gathered any considerable body of testimony on this point."

### Ouananiche on Pacific Coast.

The *Northwest Sportsman*, of Portland, Ore., in its issue of May 19 notes the exhibition in that city of three fish taken in a lake near the Cascades of the Columbia. Chief of Police Hunt, a well informed angler, who has taken the ouananiche in Lake St. John waters in Quebec, identified the three fish as ouananiche, and Judge S. H. Greene, upon a separate examination, without knowing of the identification of Chief Hunt, also pronounced them ouananiche.

Unless the ouananiche have been planted in the Pacific coast waters, and I can find no record of such plant in our own waters or in the Canadian Blue Books, I fear that both of the gentlemen mentioned are mistaken in their identifications.

Rather curiously, perhaps, Dr. Jordan in writing me this spring about another matter said incidentally: "The ouananiche is of course not found on the Pacific coast." As the ouananiche or landlocked salmon is the Atlantic salmon (*Salmo salar*), which after being hatched in fresh water has remained there without going to sea, they must first have the *salar* on the Pacific coast before the ouananiche can be developed.

This view will be discouraging to Western anglers who may have congratulated themselves upon being possessed of the game ouananiche, but the item is to me very encouraging for a reason wholly different from that to which the quoted paragraph leads. Judge Greene is familiar with the different species of Pacific salmon, therefore the three fish are probably new, unless they should prove to be Bean's *kennerleyi* salmon, which is a landlocked salmon, or the new Kamloops trout, which Jordan first called the Kamloops salmon; and if new they may tend to confirm the opinion of a gentleman who has written me that he believes that there are two landlocked salmon that have not been described in Pacific coast waters. This gentleman has been in Europe during the past winter, and a few days ago informed me of his return and that he would soon journey to the headwaters of the Columbia, where it is possible he may obtain the desired specimens of the fish in question.

### The Philology of the Ouananiche.

In the extract to which I have just referred I am quoted as to the pronunciation of ouananiche, and quoted wrongly, probably owing to a reversed letter, or it may be because, as a printer has told me, I make a *u* and an *n* so near alike that it takes a good guesser to tell one from the other. What I said was that ouananiche was pronounced as though written whonaniche, and it was so printed in *FOREST AND STREAM*, but the Western newspaper makes it whouaniche, which is all wrong.

Mr. E. T. D. Chambers, of Quebec, has written a paper upon "The Philology of the Ouananiche," and it will be read by Dr. Stewart before the Royal Society of Canada. This article will practically settle the question, as the author has been for years collecting the various forms of the word which have perplexed the readers of the literature of this game fish, and his conclusions will be authoritative.

### Fishing Lines.

"A. C. H." of Providence, R. I., asks: "Which is the best line for salt-water fishing—a linen or cotton, laid or braided? Would it improve a cotton or linen line to boil it in sperm oil? How can lines be preserved from rotting out when not in use?" The line most affected for salt-water angling is a laid linen line. It would not improve any kind of line of vegetable fiber to boil it in sperm oil. I have had good success with linen lines by dissolving equal parts of sugar of lead and powdered alum in rain-water and soaking the line in the solution. The best lines I ever saw for any kind of fishing, in fresh or salt water, were lines dressed by Mr. Walter M. Brackett, the celebrated Boston artist. It is almost twenty years ago that I first saw Mr. Brackett's salmon lines of braided silk dressed in cold linseed oil boiled specially for the purpose by J. Babcock of Cambridgeport, Mass. Mr. Babcock told me that he also boiled oil especially for dressing linen lines, but I never tried his preparations for this purpose. At the time I speak of Mr. Brackett's lines had been in use eight years and had always been allowed to dry on the reel, and from that time to this I have seen no lines from this country to compare with them. The lines were as flexible as ever a line should be, and were polished like plate glass. Such a line is expensive and requires a heap of work, but is really cheaper in the end.

Mr. Brackett's method was to soak the line in the oil three times, with an interval of two weeks between each soaking, when the line was stretched and rubbed down with a piece of chamois skin. Back in 1876 Mr. Babcock charged \$2 for a half-gallon can of the oil for silk lines, but what the charge may be now I cannot say. If an undressed line is thoroughly dried and aired after it is used and then put in a dry place, it will be preserved as long as it is possible for such line to be preserved. To dry a line wind it on a line dryer from the reel, and *vice versa*, to prevent twisting. It is impossible to wind a line on chairs or trees and not put kinks in it that should not be there. If a line does get twisted draw it in the water behind a boat with the end of the line free.

I once attempted to dress a line (silk) with pure rubber dissolved in chloroform, and in the few places where I got the line coated with the rubber it was a fine piece of work, but the places were few, and I had a strong desire to live and use the line, so I did not complete the coating of rubber.

### Re-Varnishing Rods.

Mr. F. P. V., of Delaware, Ohio, wishes to know how to remove old varnish from fishing rods without injuring the rods. First go over the rod with a damp cloth on which you have placed as much emery as the cloth will hold. Wipe the rod frequently with a wet cloth that you may see that the work is evenly done. Unless the old varnish should be defective in some way it is not best to take it all off, as it will act as a filler. After rubbing with the emery, take another damp cloth, and with powdered pumice stone again rub down the rod evenly. Revarnish with best coach-body varnish, thinly applied. If then you wish to polish the rod, rub with powdered rotten stone, first wet and then dry, being careful not to cut through the varnish. Professional rod makers varnish a rod so evenly and thinly that there is no necessity for afterward rubbing down the varnish.

### Black Bass Slaughter Begins.

On the day known as Memorial Day, May 30, set apart to honor the memory of our dead soldiers, it is legal in the State of New York, under the general law, to kill spawning black bass with hook and line in a sportsmanlike manner. The terms are rather incongruous I must admit, but such is the result of the law which now adorns our statutes as a monument to our law-makers' ignorance or disregard of the future supply of one of our chief game fishes.

The people of Warren county, New York, and the people of a few other counties in the State, have discovered the utter imbecility of a law which permits black bass to be caught just before spawning time, and the supervisors have added June to the close season. Black bass, of all the so-called game fishes, require protection for a longer period than that in which they are actually spawning, for they brood their young after they are hatched, and the young are hatched in such exposed places that if the parent fish is killed the young fall an easy prey to other fish. Black bass being the only game fish that broods its young it would seem as if this fact would be a factor in the law for its protection, instead of which it is not, under the general law of the State, permitted to spawn before it is subject to capture. This condition of things is rapidly depleting our waters of

black bass and apparently they can be saved only by supervisors' laws, as the State has refused repeatedly to act in the matter.

Wednesday being the first day of the open bass season in Washington county, five gentlemen, Messrs. N. R. Gourley, Wm. Guthrie, Dr. T. I. Henning, F. C. Viele and Robt. McClellan, drove to Cossayuna Lake from Glens Falls the evening before prepared to fish. They spent the day on the water and returned to Glens Falls in the evening, having caught seventeen big-mouthed bass and forty-three pike (the so-called pickerel). The fish were displayed in the drug store of Ferriss & Viele and their photograph taken. All day Thursday men, women and children flocked into the store to see the handsome string of fish. Never before was a string of large-mouthed black bass shown in this village, and it was amusing to notice the men when they were told that the fish were not the small-mouthed black bass, or "black bass" as they call them to distinguish them from what they called "Oswego bass." Men who are perfectly familiar with the small mouth failed to discover that these fish were not of that species. The bass were all caught on the shores by trolling a minnow bait. The troll was made by fastening two hooks back to back on a leader, one hook  $1\frac{1}{2}$  or 2 in. above the other. The upper hook was fastened in the lips of the minnow and the other in the side. On such a lure, with a single minnow, Mr. Viele caught two bass, of about 2 lbs. each, at the same time.

I asked to be notified when the bass were opened and was present. The largest bass of the string weighed 3½ lbs., and was a female. Both of the ovaries were quite hard, and I question if the fish would have spawned under thirty days. I think it was a moderate estimate to say that the bass contained over 20,000 eggs. Dr. Henning and Mr. Gourley, who were present, said those were the last black bass that they would ever catch in May. What I have said of the condition of one of the bass will answer for all except as to number of eggs in the smaller females. The milt in the males was hard and none of the fish would have spawned before the last of June. And this, be it remembered, is the earliest spring in this region within the recollection of living men.

### A Show Trout.

Thursday evening, May 31, Judge J. M. Whitman, of Sandy Hill, N. Y., returned from Aiden Lair Lodge in the Adirondacks, where he had been fishing for a few days. Later he came up to see me about a 2 lbs. trout about which there had been a discussion at Aiden Lair, and which I was to settle. It was a brook trout, *fontinalis*, caught in Hewitt Pond, and it was decked in all the vivid colors of a breeding male in autumn, making a picture for an artist. The fish had been opened so there was no opportunity for other than external examination.

A. N. CHENEY.

## ON THE NORTH SHORE OF LAKE SUPERIOR.

(Continued from Page 493.)

We were somewhat disappointed, for the dawn indicated rain; but despite this we went immediately after breakfast to Sand River, some five miles distant. On entering that mountain stream of foaming rapids and pellucid pools, we found that some barbarian pale faces had about completely depleted it of the trout by seining. Ned said he was satisfied who did the pot-hunting vandalism, for the Indians reported as having last year seen the same persons he mentioned using a net on this river. As about every violation of the game law passes unnoticed here, we presumed this would, even were it reported to the Game Warden or Commissioner, with sufficient proof to convict. Considerably discouraged at the apparent evidences of netting, we fished a few of the pools with poor success, only catching eight or ten small trout.

After r maining here a couple of hours, under the dark canopy of vapor that had threatened us all the morning with the dripping moisture, it began to rain, and then there was a stampede for the boat over a mass of broken rocks that was rendered very treacherous by the shower. After a few slips and falls and a mistep or two into the stream, we reached the boat, and then donning our rubbers were off for the camp with steady strokes from the oarsmen, there not being sufficient wind to straighten the sails. The somber shadows which enshrouded the dense forests completely harmonized with the melancholy moisture of the murky skies, and made us long for the shelter of our far-away tents.

It was a continual drip, drip, drip of the watery beads, but ever and anon some surcharged cloud of inky darkness would sweep over us, pouring out a deluge of more than minor discomfort.

We had gone about a mile when the rain ceased, and the whipping of a gentle wind began, the prelude doubtless of some fierce storm that might overtake us ere we reached camp and give us a lively tossing on the billows. The wind, of course, was suggestive of sailing, but it seemed to be working round as if to take us over the bow. The boys therefore thought it best to stick to the "cedar breeze," and they did and that manfully.

At this juncture, two loons that were indulging in their mournful notes, were discovered just ahead of us. Ned at once picked up the gun, a splendid Douglass, which we always took with us, and putting in the necessary cartridges told the oarsmen to move along.

Ned said, "I will not get either of them on the first shot, but look out for a tumble on the second."

"Sure?" says I.

"It will be a close shave at least."

Ned was a capital shot, and as the gun was a first-class shooter I felt that he would assuredly bag his game. On getting within shooting distance he motioned the rowers to stop, and then taking aim let drive. The leaden hail went straight to the mark, but the loons were under water before it fell. This was expected, but the next shot was to be decisive as to whether Ned was to put a feather in his cap or not.

The marksman is now on the *qui vive*, cool and collected, with every nerve ready to leap at his command as soon as the fowls broke the surface.

"Ah, there they are," and before the words were completed Ned's second barrel rang out with a loud report and over tumbled one of the loons, which gave a quiver or two and then floated quietly on the rippled waters.

Ned was highly complimented for his fine shot, as a loon is a very hard bird to kill, the second shot, as stated, being the one that does the business, if at all.

We rowed out and picked up the dead fowl, which Ned

gave to Kenosh, who had expressed a wish for it, as he desired to mount it for a household ornament.

Ned declared it was one less fish-eating glutton, and presumed it had fattened on many a lovely trout, and greatly regretted that he had not extinguished the pair. Well do I recollect one season at Pelee Island, Lake Erie, when six of them were captured at one haul in the "pot" of a fisherman's pound net, which they had entered through the channel in their pursuit of fish. Once in, they were safe, as it requires 100ft. or more for them to raise on wing. In the morning, when the pound men came to make a "lift," the entrapped fowls made such a plaintive outcry as to almost move the fisherman to release them, but as they looked on the profit and loss account of it, the fish-eating fowls were at once dispatched with the oars, an immolation to mammon.

The boatmen, replacing their blades once more, bent to their work, intent on reaching camp as soon as possible, being fearful of more rain and a strong head wind. Turning a projecting point, we came suddenly upon a duck with a brood of five, all paddling along in a bunch quite close to the shore. Ned again prepared to shoot, but when I reminded him of the utter worthlessness of summer ducks and of its being the close season here, as I was informed, he regretfully laid his gun aside with the remark, "I could have secured the entire lot with one shot."

A mile or two before we reached our quarters the sky began to lighten, and soon the sun peeped out, sending her crimson-tipped arrows to the mountain tops, into the quiet woods and glens, and along the ragged cliffs and upon the broad lake.

The leaden clouds rapidly retreated before the celestial radiance, and by the time we reached camp the sky was all aflame in gorgeous tints, and the wind singing a lullaby as it came from the flowered land of the south.

"All nature laughs, the groves are fresh and fair;  
The sun's mild lustre warms the vital air."

What a rapid change; but such is the capriciousness of the elements on this grand old lake; shower followed by sunshine, storm by calm. Such golden libations, such balmy airs, such silvery seas, at once filled us with the ardor of angling, and no sooner was the dinner over, the dishes washed and the camp put in order than we were off for a three-mile run along the shore to Gravel River with our "sweet singer of Israel" warbling:

"The wind is quite invitin',  
An' it's gettin' down to play,  
Where the freckled trout are risin'  
In the big pools far away;  
The violet 's peepin' for the sod,  
The sweetheart 's at the gate;  
One angler 's got a fishing rod—  
Another flies, for bait."

Ned deeply regretted that he had not yet secured the desired field mouse for a practical experiment on a big trout. They were evidently so rare at this camp that not one of them had been seen, though all hands were at times on the sharp lookout for the tiny rodents. Fifty miles above Ned said they were very thick, and that one season they had made one of his blankets so ragged as to almost ruin it. They had their little homes in the deep mosses on the rocks, and many a time he had driven a half-dozen or more from under his bed. We all promised to keep the search for the four-footed lilliputs of the field, as he was very anxious to experiment on Kit Clarke's statement in his "Practical Angler," a very readable and instructive book, by the way. I assured Ned that when trout took almost any living bait, even to small birds, he need have no fear but what a swimming mouse would soon attract and disappear in the tough jaws of the *S. fontinalis*.

Ned, before leaving camp, had made a decided change in his flies by discarding his fancy creations and selecting a red-spinner for his stretcher and a Lord-Baltimore for his dropper, while I took a Parmacheene-belle for my stretcher and a red-ibis for my dropper, both popular flies, and as I have found, quite attractive.

We flogged the first point just above our camp, till we were satisfied that no trout, if there, wanted to form the acquaintance of our somewhat fanciful lures. We now go nearly half a mile without dropping a fly, as we had never caught any trout here but those of an undesirable size.

Striking the higher ridges of a serrated shore, backed by the deepening green of the forests and the gray rocks that fret the mountain wall, we solicited a call from some of the dotted dwellers beneath the darkened lines. They answered our summons instantly, for on the very first cast I impaled a dandy that set the little wheel revolving to a cadence of sweet deliciousness. He was—

"Heroic, stubborn, full of fight,  
Quick to the bottom depths he flies;  
Then dashes left and right,  
Nor yields submissive till he dies."

He was a fraction over two pounds, and a beauty, radiant in all the glories of the rainbow hues. Ned was not far behind me, for no sooner was my painted princeling in the net than he strove to win renown in the capture of another Red-Jacket with the royal insignia, who had paid his respects to Lord-Baltimore rather unceremoniously. He fought like a Trojan, but his bravery availed him naught, for he, too, fell a victim to the duplicity of the white-haired rodster. This was all we secured here, though we worked for about a half an hour in expectation of capturing a fin or two more; but it was all in vain.

Just around the massive piece of rigid masonry, which ran boldly into the lake for a few hundred feet, was a delightful little cove; but its glowing tints, deep shades and graceful curvature were all that rewarded us, for we had no sight or sign of trout, and, therefore, were alone content with the charming landscape. It was a picture shut up, as it were, in a basin of rough-hewn battlements, and one of many that greets the gentle angler on these rugged shores—

"Where rushing waters split on hostile rocks,  
Spouting aloft the iridescent spray,"

We push along under azure skies, and by shores of rocky wrath and ravage, that yield us no return for our constant work. Our flies sail into every nook and cranny, over every shaded line and around every rock where the waters dash and the sunshine plays. At last as we were about to give up in despair, Ned hung a lovely trout that fairly made the water boil around his stretcher. From the start he handled the trout with great care and

patience, for he was fearful it was not well hooked. He would give it no "butt" nor allow the least slack, but dallied with it as tenderly and carefully as if it were of priceless value. He played, and played, and played it, until I was so tired of seeing his delicate manipulation that I urged him to bring it to net without further delay. The advice went unheeded until at last I pulled out my watch to time him, crediting with the fifteen minutes already consumed. This failed of effect, as he was not to be ridiculed into undue haste. Worried out, at last the trout showed a spangled side to the blazing sun, and then he pulled him about as carefully as he had played him. Finally the net fell around the victim and he was duly boated, much to my relief. Ned, eager to examine the embedding of the hook, found that his surmise was correct, for the trout was hooked by the very slightest shred of skin which did not even hold the weight of the fish, which was only 2½lbs.

"That's what I call artistic angling," said Ned, when he found he had scored a point in the gentle art.

"I always gave you credit for modesty, Ned, but am willing to admit you're artistic in one thing."

"What's that?" he eagerly inquired.

"Trumpeting."

The boys, strange to say, caught on here and smiled broadly, and to brighten the occasion still further Kenosh had to utter his old chestnut:

"No flies on him," and then the laugh rang out.

Ned accepted the pleasantry without demur, but I well knew he would endeavor to even up on the first opportunity.

We caught no more around the ramparts of gray and wave-worn rocks, and taking up the advance the boat pushed along for some distance till we reached what we fancied a cosy retreat of the tinted autocrats of the lake. It was a place shadowed by a perpendicular cliff of frowning aspect, the top of which waved with dark pines and evergreens, upon which the afternoon sun was playing in bars of quivering gold. Here last year we had caused lamentation among the trout tribe, robbing it of many a proud and peerless beauty. In hopes of reaping the same good fortune the war of pure deceit commenced with the artful lures searching every inch of the ground where a scarlet foe was supposed to lurk.

I was the first to get a rise, but made a failure to impale. At the next fall of the flies he took my dropper with a savage snap of his iron jaws and then there was trouble in the trout family. Desperately he plunged for the bottom and on arriving there concluded to take the fast line for a Southern tour. He was checked off, however, after he had passed a station or two, and compelled to make the return trip by a tramp over a rocky road that so wearied him that he was fain to seek repose in a much-needed rest. It was but a short time after this that he was gently consigned to a couch in a hammock of close-woven threads, which gracefully swung him to the boat. Here he slept so soundly that he never awoke. He was only a two-pounder, a weight that was now quite acceptable, for owing to the very poor fishing this season we were not curling our lips in contempt at this size. A three-pounder was somewhat of a rarity, and a four-pounder decidedly a *rara avis*.

After various perplexities from a few misses by both of us, Ned was fortunate enough to catch one about the same size. Two more trout, one a pound and a half and the other a pound, were caught, and then we reeled up and ordered the sails hoisted for the return.

A gentle breeze, which was increasing with the glowing shadows, was in our favor, and as our sails filled and we skimmed o'er seas in radiant sparkle and musical murmur, I thought:

"How happy are we, now the wind is abaft,  
And the boatswain he pipes, 'Haul with our sheets aft';  
'Steady, steady,' says the master, 'it blows a fresh gale;  
We'll soon reach our port, boys, if the wind does not fail.'"

We had fully three miles of a sail to camp, and as the sun was two hours high the beauty of a declining evening was to be realized in gorgeous grandeur. Mountain ranges towered above us with their peaks in marvellous tints, golden glint and tangled shadows filled the green woods, while soft and hazy repose were in every vale. Overhead the arched dome was fretted in roseate clouds that dropped fanciful figures upon the silvery sea, while to the west celestial hands were weaving a royal robe for the advancing Phœbus.

"Purple, violet, gold and white;  
Royal clouds are they;  
Catching the spear like rays in the west—  
Lining therewith each downy nest,  
At the close of the summer day."

Our half-breeds, who had grown very tired of our present quarters, took up the Point Brulé theme as we sailed along, giving us such elaborate romances of the big and numerous trout there, that Ned at last fairly became imbued with the spirit of embarking for the Eldorado. Weather permitting, we were to be off early in the morning. It was about twenty-five or thirty mile distant, and with a fair breeze would make it inside of five hours.

Nothing was now thought of or talked about but the onward move and big trout. Peter had a red-coat of lordly proportions behind every stone and in every chasm and ledge at our prospective quarters, until at last we were so wrought up about it that we came very near making a trip to it that evening. The last words Peter said to Ned, as he stepped out of the boat on landing, seemed so audaciously fairy-like, that I was positive he was now drawing the long bow. His fancy was evidently becoming as elastic as gutta percha.

Point Brulé had formerly had a reputation as good trouting grounds, but it had been fished so much recently that its finny population must necessarily be somewhat limited by this time.

We went to bed that night with Peter's trout tales—which at the camp-fire had still further elongated—ringing in our ears and filling our minds until finally I fell asleep and dreamed of capturing in strange waters trout so large that the landing net was insufficient to hold them.

Dawn finally came after the night of blissful deception, with our enthusiasm for the angle at Point Brulé whetted to the keenest edge, but alas, there was a leaden sky with ragged clouds trailing from the edges of the eastern horizon and a head wind that at once dampened our ardor. Soon the mist gathered in the valleys and the rain ere long began to patter, and then we concluded

that the long looked for change in the weather was about to take place. Sombre clouds were to succeed the golden fleeces, howling storms the bright calm, while the gentle murmur of gentle waves would again in memory be.

We growled a little at our disappointment, but finally made the best of it by remaining in our tent while the shower lasted, and taking up our old game of cribbage until that at last wearied. Ned then made an attack on his tackle box, and getting out a fanciful assortment of feathers set his fertile brain to work evolving some novel lure. He was serenely happy in this work, and as he selected feather after feather would gaze upon them with that pure delight which genius only feels, and then after satisfying himself of the color combination would commence the construction with his nimble fingers as if he expected to achieve immortal fame. Always looking to perfection in the fly, he would invariably add a beaded eye, and a pair of horns that stuck out very much like spear points. He copied after nature, he said, but if he did he failed to strike it with anything like fidelity. Occasionally he tied a fly that proved a taking one, but a red or white rag, in certain conditions, is also attractive. He, however, got a world of pleasure in the creation of his feathery fancies, and it therefore paid him handsome dividends.

I had frequently suggested to him to name his pet creation, but he cared little for that; so thinking this a good time for a little facetiousness, I picked out a few from his book, and as I held each aloft I thus named them: The Holy-Terror, Red-Avenger, Dolly-Varden, Beaded-Bug, Horny-Frog, Rainbow-Beauty, Kiss-me-quick, Razzle-Dazzle, Snatch-'em up, the Killer, the What-is-it, Bushy-Ranger and the Never-get-'em, and so on, for quality. Ned smiled just a wee bit and said there was nothing in a name, as they would lure just as quick by one name as another.

"Or fail, all the same," I put in.

"You are always critical or nothing, but I am like Sir Izaak."

"How's that?"

"Though I love civility, I hate severe censures."

"Beg pardon, Ned, I thought you always courted criticism." And the subject and the flies were dropped at the same time, as the old sportsman was evidently nettled at my humorous harping on his gentle handiwork. As there was a brief cessation of the rain just then, I thought it best, in order to give Ned time to recover his equanimity, to walk out to the rocky ramparts in front and hear what the wild waves were saying.

It rained at intervals till about 4 o'clock and then the dark and vaporous clouds broke, the sky began to clear, the sun gleamed out and the lake glittered in silvery spangles, while the jagged cliffs with their furred forests flamed with a flushing radiance.

Such propitious weather inclined us to make a trip to the "big rocks" in the bay with evident intent to replenish our larder with the toothsome trout. As we slipped o'er the crystal waves we are ardently enthused, after emerging from the long hours of deep gloom, with the ravishing enchantment into the luminous light from the great orb which presented a panorama so infinitely picturesque, so strikingly suggestive.

Ned, who was very sanguine of success, had concluded to use his new creation of the morning, giving it first place as "stretcher," and a Henshall, which he held in high esteem, as dropper. I stuck to my two flies of the previous day, a Parmacheene-belle and a red-ibis. They had done me good service and would, I opine, again prove highly attractive. We caught nothing till we reached our old favorite rocks and here Ned secured one at the upper end of the gigantic granite before I began to cast. I was, however, not far behind him, for my third cast was successful, it bringing me a prize of almost 2lbs. After a thorough whipping of the waters at my end of the granite without a rise, I deserted it and hastened along the shore over rocks in the most disordered confusion, climbing up one place and sliding down another, leaping over an intervening chasm that blocked my way and then circling around an abutting spur. Along this rough shoreland I was sometimes casting from a level surface, and then again from a steep incline; but as it took me over a bottom of the lake that disclosed a perfect chaos of fallen or upheaved rocks, just the desired cover for the frescoed beauties, it mattered not. A long distance over the tortuous route had been made before I secured a trophy, but it repaid me for all the vitality I had expended as it was well on to 3lbs., and a romance in tints that blushed with the rubies and roses so gorgeously painted in the dying fires of a sunset sky.

Peter, who had accompanied me as netter, as well as an assistant in scaling the rocky obstructions, advised me when I was through thrashing this place to go a short distance further to an elevated jutting and there try for the trout. It was somewhat difficult to reach, but when once there you had an ideal, as well as isolated place, which you would wager on its giving you delightful sport.

I took the half-breed's advice and was soon working my way over a savage piece of rockery that made the beads of perspiration fairly rain upon the moss-covered trail. At last the toilsome tramp was over, and after a short respite I took position on the outer edge, sitting on a smooth and steep incline that ran some ten feet to a narrow and level ledge below. Peter cautioned me to be careful when I was casting, for a loss of balance meant a slide to the projecting bottom, if not into the icy cold lake. On my third cast there was a leopard-like leap and a splash so sudden that I forgot all about my insecure position, and after striking with my right hand and hanging the gleaming trout I raised my left for manipulating the reel, and away I slid, stopping fortunately at the small and smooth ledge below. Peter, on seeing that I had escaped a cold bath, was so convulsed with laughter at the sudden manner in which I had taken my departure for the bottom, that he came near going the same route while leaning over to look at me. The fish was still fast, and as I now had a good base for operating I killed him in the usual time after he had gotten through with his acrobatic performances, the grand and lofty tumbling. I called for Peter to slide down and net him, but before he would do so inquired as to getting back. As the distance was not over ten feet I suggested the pyramidal style, a shoulder climb.

"All right," he said, as the plan dawned upon him as practicable, and on handing me the landing net slid down with the agility of an athlete, being checked by me when within reach. The fish, which was a 2½-pounder, was

duly netted, and then we prepared for the escalade. Peter being the strongest and most active, made the ascent over my shoulders, and then on my taking hold of the handle of the landing net and Peter's hand, when within reach, I was soon safely at the top. Our return was easy enough, but the going down on your back with a rod in one hand, to alight upon a narrow ledge without plunging into the cold lake, is a feat that I would not like to attempt a second time, either voluntarily or otherwise. Peter said my escape was simply miraculous. The rubbers which I had put on over my slippers for rock climbing, which saved me from a very cold bath. ALEX. STARBUCK.

[TO BE CONTINUED.]

### The Mastigouche Waters.

MONTREAL, June 7.—I returned on Monday last from the Mastigouche lakes where I had been spending a very pleasant ten days. The season opened much earlier than usual. On my arrival I found the trees out in full leaf on the 24th ult.; the black fly, fully alive to the condition of affairs, was making things lively both for man and beast, so that smudges were in order everywhere. It is surprising how quickly the cattle in these parts become educated. It don't take them long to know what a smudge is built for, and which is the leeward side of it, and there you will find them as close up to it as they can get, only leaving it for a short time to hurriedly snatch a few mouthful of grass, and then rush back to the friendly protection of the smudge.

Although the weather was not altogether what one could have wished, being rather rainy, still we managed to enjoy ourselves and have some very good fishing. For the first few days the trout did not rise well to the fly, but before I left one could have as fair fly-fishing as any one might wish for; and as for bait fishing it was simply slaughter. On the 24th, the day I arrived at camp, there were eight gentlemen out fishing, and in the evening when they returned they had nearly 500 trout, that must have weighed from 125 to 140lbs., there being quite a number in the catch that would run from 1lb. to 2½lbs. While I was there I had the pleasure of seeing three caught that weighed from 4 to 4½lbs. These were I believe taken with live minnows, but one was caught trolling with a very small Skinner spoon, with a salmon fly on it, instead of the usual treble hook, with which the spoon is usually mounted when sold.

We had a number of sportsmen from your side of the line visiting our camp, some of them for the first time, while others of them have been regular visitors for the past seven or eight years.

I hope to take another trip to the Mastigouche about Sept. 1 next, as that is really the most delightful season of the year in that charming region. H. W. A.

### Plaice Fishing at Asbury Park.

ASBURY PARK, N. J., June 4.—The bad weather of the past two weeks has held fishing very slow at this point. Honest effort has been put forth by men who stand at the head of the fraternity hereabout, but results have been far from satisfactory so far as sea fishing is concerned. The rivers and lakes have done a little better, but few catches of importance are reported. I succeeded in boating seven fine plaice at Shark River on the afternoon of May 30, which I believe to be the best catch of the season so far. The almost total extinction of striped bass, kingfish, sea bass, etc., make plaice fishing quite popular. Taken with light tackle, using a float with a well leaded line to keep the bait close to the bottom, these fish afford really excellent sport. Being strongly carnivorous they will take almost any fish bait, but the most killing is the green-head minnow when presented alive. I have frequently taken fifteen to twenty in two hours' fishing in the tide rips of our inlets, with average weights of 3 to 5½lbs. each. I am well aware that the plaice or fluke is generally held in light esteem by anglers, being in no sense a game fish; but like many another subject, the pleasure attending its capture depends largely upon the methods employed. LEONARD HULT.

### The Log Cabin Club's Large Trout.

ST. JOHNSBURY, Vt., June 4.—Four years ago the Log Cabin Club, of St. Johnsbury, Vt., dammed a small brook near its source, making a pond of fifteen acres or thereabouts. Besides the small brook the pond is fed by springs. The brook before being dammed may have contained a few small trout. The club put into the pond 5,000 trout fry in June, 1890. In 1892 members of the club examined and fished the pond without results. The same results followed their efforts in 1893. This season thirty-two trout have been taken. The largest weighed 4½lbs. The smallest weighed ½lb., and nearly all the others weighed from 2 to 3½lbs. There are more big ones in the pond, as several have been hooked and lost.

Query.—Is it possible that these enormous trout are the results of fry planted in 1890, or were there probably a lot of trout in the brook before it was dammed and which, having a larger range, grew so rapidly? From all appearances there are a great many large trout in the pond, but no small ones have been discovered.

WHITLOCK.

### The Kingfishers.

BASSWOOD LAKE, Algona, Canada, June 2.—The advance guard of the Kingfishers turned up here on Wednesday last for their summer's campaign, consisting of Messrs. Harry Foulds and Gooder of Cincinnati, also Mr. J. Dobie of Thessalon. Owing to the backward state of the season, the trout have only just made their appearance. The main army of Kingfishers will not make their appearance till July 1. G. F. DYER.

### Restigouche Salmon.

CAMPBELLTON, N. B., June 7.—Heavy run of large fish taken in estuary nets yesterday; expect big angling scores from the Restigouche next week. So far the rod has not done much, as first (small run) got ahead of the few anglers who arrived in May. Expect all pools will be occupied next week. So far the netted fish average 25lbs; 500 fish shipped on train this morning. JNO. MOWATT.

### Niagara County Anglers' Club's Fishing.

WE regret that the report of the Niagara County Anglers' Association fishing excursion has come to hand so late that it must be deferred to next week.

## Fishculture and Fish Protection.

### Relations of the Community to the Fisheries.

BY MARSHALL M'DONALD, U. S. FISH COMMISSIONER.

[A paper read before the American Fisheries Society, 1894.]

AS PRELIMINARY to the discussion of this topic, it is well to bring to the attention of this Society the extent and importance of our fishing industries. The United States Commission has recently completed and is now publishing a paper on the "Statistics of the Fisheries of the United States." By reference to this report you will find that the commercial fisheries of this country give employment to 182,407 persons; represent an investment in vessels, boats, fishing gear, buildings, wharves and other property of \$58,355,000, and yield products of the annual value of \$45,000,000 in first hands. The cost to the consumer is probably three times the amount received by the fishermen, or about \$130,000,000 per annum. If we add to the number of persons actually employed in the fisheries those who are dependent upon them, as also the large number of people engaged in various other occupations which are directly or indirectly dependent upon the fisheries, it is safe to assume that the fishing industries of the United States furnish the means of support to over 1,000,000 of the inhabitants of this country, or to one person in every sixty-five of population.

The conditions under which our seacoast and Great Lake fisheries are prosecuted are peculiar, and without parallel when we compare them with the industries of the land. Individual ownership and control is the foundation upon which rests all of our industrial enterprises other than those pertaining to the fisheries. The laws give full protection, and every one is free to enjoy the fruits of his enterprise and labor. The farmer plants in the full assurance that he and not another will reap the harvest. He improves his land and increases his investments, knowing that the greater usufruct determined by the exercise of intelligence and energy will inure to his own benefit. What is true of agriculture is alike true of the various industrial enterprises, manufacturing, mining and commercial, which engage our people. We may safely trust their administration to the intelligence and enterprise of those engaged in them.

In respect to our great commercial fisheries, the conditions are entirely different. Individual ownership of the open waters is not practicable even if it were desirable; nor can we safely trust to the individual to establish or conserve conditions which are necessary to maintain supply. Indeed, it is not reasonable to expect that he will undertake to sow the seeds of a harvest which other men may gather. Intent on gain, he will fail to recognize or appreciate any deterioration of the fisheries so long as his operations yield him a fair return for labor and investment.

The ownership of the waters is in the State, and they should be framed for the general use and benefit.

The right of fishing of the individual is subject to the paramount right of the State to prescribe the conditions under which such right may be exercised.

Equal privileges under the law and no invidious discriminations or unnecessary restraints upon the enterprises of the fishermen should characterize the policy of the State in enacting and enforcing such regulations as may be found necessary for the conservation of the fisheries.

The right of the community, through its representatives, to regulate the fisheries and to prescribe the conditions under which individuals may exercise the right or privilege of fishing being conceded, we must be prepared to admit that the power of the State should be exercised with the most careful conservatism and consideration of the immediate interests to be affected.

The community is concerned only as to the abundance, quality and price of the products drawn from the waters. It is indifferent as to the methods, except in so far as they affect the quantity or condition of the fish supply. When conditions are impaired, when there is evidently a decrease in the fish food supply, then it is incumbent upon the State to adopt measures to arrest the decline. This policy is in the interest not of the community only, but also of those who are engaged in the fisheries, or who are occupied with enterprises and industries which are related to them, since the security and profit of investments depend upon the assiduity with which we guard the fisheries from the operation of causes which may determine permanent deterioration. The necessity of intervention to this end being satisfactorily established, we may attempt the regeneration by artificial propagation on a sufficiently extensive scale to repair the waste by natural casualties and man's operations, or we may so regulate the times, methods and apparatus of the fisheries as to permit natural reproduction under the most favorable conditions, or we may resort to both means, artificial propagation being pushed as far as practicable in order to ease or release the restraints upon the operations of the fishermen.

Undoubtedly the rational method of dealing with the fisheries is to supplement as far as possible by artificial propagation, any deficiency in natural reproduction arising through the operations of the fisheries. Where this can be shown to be adequate, there should be no further interference with the fisheries by legal restrictions or prohibitions that is necessary to insure equal privileges under the law in the exercise of the common right of fishing, or to prohibit or restrict the use of methods or apparatus that experience has shown to be unnecessarily wasteful or destructive. Whether we can rely entirely upon artificial propagation to compensate for the destruction effected through the agency of man, I am strongly inclined to doubt. The value of this resource as a sufficient means of maintaining production and at the same time imposing little or no restraint upon the fishing enterprises, is very forcibly illustrated by the history of the shad fisheries of the Atlantic coast rivers since 1880. This is a species which must find access to the fresh waters of the rivers in order to accomplish reproduction. Where the streams are unobstructed it pushes its way up hundreds of miles from tidewater, in order to find suitable spawning grounds. It does not spawn in the brackish or salt waters, and if it did, the eggs would prove infertile. Under the present conditions of the shad fisheries but a very small portion of the shad approaching our rivers under the constraint of reproduction ever find their way to their spawning grounds in the rivers. Fully 80 per cent. are taken on the shores of the ocean or the estuaries of our rivers taken on the brackish water of the great bays which indent the shore line. Under these conditions we are compelled to depend largely, if not entirely upon artificial propagation to repair the annual waste by natural casualties and the fisheries. This great fishery is under conditions as artificial as is the corn or the wheat crop. Its permanence and such marked improvement as has taken place since 1880 in the annual value of the product, is unquestionably to be attributed to the extensive measures of artificial propagation which have been conducted with this species by the Fish Commissions of the Atlantic sea board and by the United States Fish Commission.

Since 1885 there has been a steady and progressive increase in the annual value of the shad taken on the Atlantic Sea Board, and at present the amount and value of the annual product is nearly double what it was in 1880. It might appear that the development of the shad fishery as disclosed by the statistics of production from 1880 to 1893, inclusive, would indicate that artificial propagation may be relied upon as adequate to maintain production, even under the most adverse conditions. We must consider, however, that the ability to maintain supply by this means can only continue so long as a sufficient number of shad are permitted

to pass into the rivers to furnish the basis of a supply of eggs necessary to carry on the work. I cannot disguise the fact that every year we have more reason to apprehend that the existing fishing conducted in the brackish and salt waters will eventually so reduce the number running into the rivers that we will no longer be able to rely upon artificial propagation, unless aided by protective regulations and legal restraints upon the pound net fishing, not only in the rivers, but also in the bays.

When we turn to the important salmon fisheries of the Columbia River we find the same conditions not only impending but accomplished. Comparing the average catch for the five years beginning with 1889 with the previous five years we find that there has been an average reduction of 150,000 cases in the take of salmon and a reduced annual value of not less than three-quarters of a million of dollars. This is undoubtedly to be attributed to the fact that the appliances for the capture of salmon in the lower river are so numerous, so complete, and so fully occupy every channel of approach that at present very few salmon are able to reach their spawning grounds in the upper rivers. Now, what is impending or accomplished in the present conditions of the shad and salmon fisheries certainly will occur in regard to every species the spawning grounds of which are in these rivers. For it is evident that in regard to any of them the methods of fishing may be such as in a large measure to shut them off from their spawning grounds. Under such a state of things artificial propagation on adequate scale could be no longer carried on, for the reason that we would have no ripe fish from which to draw supplies of eggs.

Now, what is true in regard to our river species, is alike true in regard to all the coast species whenever the operations of the fisheries are such as to intercept in considerable measure the movement of mature fish to their spawning grounds. The necessity of the regulation of the fisheries by law is apparent in every case where a knowledge of the habits and movements of the fishes of our coastal waters is such as to indicate that existing methods do seriously interrupt or interfere with their approach to their spawning grounds. What shall be the character of the protective regulations required in the interest of the fisheries must be based upon a complete knowledge of the life history of the species. In regard to many of our coastal species, we are approaching a time when it will be possible to give conclusive information upon this subject which may serve as a basis for such regulations as the conditions of the fisheries may require.

You are all aware that the sentiment as to the necessity of protective regulations in reference to the coast fisheries is now active and aggressive. When the allegation is made that there is a material decline in the products of our fisheries, the fishermen, who fear the results of hasty legislation based upon inconclusive data, reasonably ask for the evidence as to the decline in the coast fisheries which warrants the attempt to interfere by law with interests which employ a large number of men, a large investment of capital, and which yield products which are very important to the community.

In considering the statistics of our fisheries we may consider the fisheries as a whole, and by a comparison of the census taken at intervals of a term of years, determine conclusively the facts as to aggregate increase or decrease in the period considered. Again, we may make the comparison by geographical divisions, seeking in this way to arrive at local fluctuations which are not indicated in the general aggregate; and again, we may take up the special fisheries for certain important economic species, and by comparison of products determine the fact of increase or decrease in regard to this particular fishery.

[TO BE CONCLUDED.]

### PUBLISHER'S DEPARTMENT.

#### Walsrode Smokeless Powder.

MESSRS. VON LENSER & DETMOLD, who have been appointed American agents for Walsrode smokeless powder, issue an interesting circular descriptive of the powder for use in both shotguns and rifles. Explicit directions for loading are given. By using ordinary common sense the agents say this powder may be as safely loaded as any other, but through a fear that such precaution would not be used, only charged shells have heretofore been sold. The agents say: "When compared with the bulk or measure of black powder only about one-third the quantity of Walsrode powder will give the same penetration and power, and at the same time the same bursting force as the three times quantity of black powder by measure. It is therefore absolutely necessary when using 'Walsrode' powder that each load be weighed on a fine scale or measured with a special 'Walsrode' powder measure."

The Walsrode rifle powder will be furnished in half-pound canisters and a table of loads for the cartridges most often used is given, from which it will be observed that as regards weight the proportional charge is about one-half the standard. Special U. M. C. primers have to be used.

The "Buzzacott Complete Camp Cooking Outfit" is the most practical thing of the kind that has yet been offered the American sportsman. It is a marvel of ingenuity, and combines every utensil required for any kind of cooking with a minimum of weight. It will boil, stew, roast, fry, bake or broil, and provides the means of doing either or all at the same time. All the articles contained in the outfit nest snug within each other, and no additional care is required in packing. It will burn any fuel, and requires no fitting or adjusting, and no stove pipe. It has the endorsement of the Government, being used by the regular army, and is worthy of remark that this is the only cooking outfit which has stood such a test. Its merits seem to warrant its gaining as complete an ascendancy among sportsmen.

#### The Pennsylvania's Summer Traveling Guide.

THE summer excursion book of the Pennsylvania Railroad for 1894 is out, and presents an unusually meritorious appearance. Great care has been exercised in its compilation, the technical information being especially reliable. The great variety of routes suggested, the exhaustive schedules of rates, the graphic descriptions of about four hundred places, the explanatory maps and the illustrations, make the volume exceedingly valuable and almost indispensable to those contemplating summer touring. A nominal charge of ten cents is placed on each copy, which can be obtained on application to ticket agents or the General Passenger Agent of the Pennsylvania Railroad Company, Philadelphia. Ten cents extra will be charged for mailing.—*Adv.*

#### 538 Pages for Five Stamps.

A COPY of "Health and Pleasure on America's Greatest Railroad," containing 538 pages, with over 300 illustrations, and a description of more than 1,000 tours; finest book of its kind ever issued, will be sent to any address free, postpaid, on receipt of five 2-cent stamps, by George H. Daniels, General Passenger Agent, Grand Central Station, New York.—*Adv.*

#### Fishing Among the Thousand Islands.

FIFTY-SIX pages, beautifully illustrated, nine maps showing exact location of the fish, full information, with numerous accurate illustrations of tackle, etc., will be sent to any address free, postpaid, on receipt of five 2-cent stamps, by George H. Daniels, General Passenger Agent, Grand Central Station, New York.—*Adv.*

#### A Book for Two Stamps.

A COPY of the "Illustrated Catalogue" of the "Four-Track Series," New York Central Books and Etchings, will be sent to any address free, postpaid, on receipt of two 2-cent stamps, by George H. Daniels, General Passenger Agent, Grand Central Station, New York.—*Adv.*

DR. COOK'S ARCTIC EXPEDITION. A few sportsmen can join it. To "Greenland's icy mountains." To within 800 miles of the North Pole. Hunting polar bear, seal, walrus and reindeer.—*Adv.*

## The Kennel.

### FIXTURES.

#### DOG SHOWS.

Sept. 4 to 7.—Des Moines Kennel Club, at Des Moines, Iowa. M. Bruce, Sec'y.  
Sept. 10 to 14.—Toronto Industrial Exhibition Association, at Toronto. C. A. Stone, Sec'y.  
Sept. 18 to 21.—Rhode Island State Fair Association, at Cranston, R. I. W. W. Dexter, Sec'y.

#### FIELD TRIALS.

Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallaug her, Winnipeg, Sec'y.  
Nov. 5.—United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.  
Nov. 6.—International Field Trials, at Chatham, Ont. W. B. Wells Sec'y.  
Nov. 23.—Eastern Field Trials Club, at Newton, N. C. W. A. Coster, Saratoga, N. Y., Sec'y.  
Nov. 23.—Philadelphia Kennel Club, at Newton, N. C. Dr. G. D. B. Darby, Philadelphia, Pa., Sec'y.

### Oakland Dog Show.

THE inaugural dog show given by the Alameda County Sportsman's Association was held at the Tabernacle, Oakland, Cal., May 30 to June 2. The show was a success as far as the quality of the dogs is concerned, and the attendance was also good. St. Bernards and Irish setters were better represented than at previous shows on the coast. Greyhound men were also out in force, and several well known "leash dogs" added ribbons to their field laurels. Fox-terriers, especially in the bitch class, were strongly represented, as were pointer and English setter classes. Mr. A. C. Waddell accomplished his task by the second day, and added still further to his reputation as a careful, conscientious and competent judge, and as it is possible that this well-known sportsman may take up his residence on the coast, the Californians should welcome him, as then they could always count on a judge of their own instead of having to look so far afield for one. The building and dogs were well looked after, in fact, the arrangements generally seem to have been very praiseworthy. The Alameda school children were admitted free the first day, though we should think it was doubtful policy to do so during judging, as the crush retarded judging somewhat. A full list of the awards follows, but as many of the principal dogs were at Los Angeles and a full report of that show appeared in our issue of May 5, it is not necessary to repeat it.

#### LIST OF AWARDS.

**MASTIFFS.**—Dogs: 1st, L. Wellendorf's Leo; 2d, G. N. Miett's Chino; 3d, John Stutz's Noble. High com., E. L. Fitzgerald's Toby. Bitches: 1st, M. Garrett's Bess II.

**ST. BERNARDS.**—ROUGH-COATED—Dogs: 1st, J. G. Barker's California Bernardo; 2d, Capt. W. Poole's Columbus; 3d, E. R. Smith's Hector. Reserve, F. McAllister's Monk. Very high com., Mrs. T. J. Dillon's Jumbo and J. Thomas's Bruce. High com., W. H. Collins's Lord Hualpa. Bitches: 1st, W. H. Collins's Lady Bute II.; 2d, E. R. Smith's Gundred; 3d, Miss M. McGinley's May Queen. Reserve, F. A. Bettis's Bohemian Girl. Very high com., W. H. Collins's Lady Sylvia and Capt. W. Poole's Browney.—PUPPIES—Dogs: 1st, H. R. Neubauer's Robin Hood. Bitches: 1st, F. H. Allen's Laura Alton.

**ST. BERNARDS.**—SMOOTH-COATED—Dogs: 1st, T. Prather's Judge Bitches: 1st, Countess Valensin's Bianca.

**GREAT DANES.**—Dogs: 1st, W. H. Coleman's Max; 2d, W. Zing's Cesar II. Bitches: 1st, B. W. Marlin's Hagar.—PUPPIES—Dogs: 1st, L. B. Sibley's Tiger; 2d, H. Remillard's Bay. Bitches: 1st, C. Dresser's Flontis.

**AMERICAN FOXHOUNDS.**—Dogs: 1st, F. W. Sanderson's Paddy; 2d, W. H. Staniel's Guess. Bitches: 1st, P. Mosegaard's Fanny M.; 2d, Mrs. W. H. Staniel's Julie; 3d, L. Simpson's Butte.—PUPPIES—Dogs: 1st, Mrs. Mosegaard's General Molka; 2d, S. E. Fischer's American Scout. Bitches: 1st, Combs & Maxwell's Queen C.

**ENGLISH FOXHOUNDS.**—Dogs: 1st, J. McEnroe's Landlord.

**GREYHOUNDS.**—Dogs: 1st, J. L. Coleman's Woodstock; 2d, P. Curtis's Skyrocket; 3d, G. Daugherty's Peter Jackson. Very high com., H. McCracken's Donard M. Bitches: 1st, J. L. Coleman's Kathleen; 2d, Mrs. H. McCracken's Lady H. Glendyne; 3d, S. Tyler's Pronto. Reserve, G. Daugherty's George Dickson.

**NEWFOUNDLANDS.**—Dogs: 1st and 3d, Sierra Kennels' Nero and Duke Royal; 2d, H. L. Witsel's Bruin. Very high com., Dr. F. P. Muffe's Nero. Bitches: 1st, C. Pardi's May; 2d, Sierra Kennels' Myrtle S.; 3d, S. Brophy's Nellie.

**CHESAPEAKE BAY DOGS.**—Dogs: 1st, T. Higgs's Trout. Bitches: 1st, T. Higgs's Bess.

**POINTERS.**—CHALLENGE—Bitches (under 50lbs.): 1st, A. B. Truman's Patti Croxeth.—OPEN—Dogs (over 50lbs.): 1st, H. Spencer's Buck S.; 2d, T. Ayden's Pete. Bitches (over 50lbs.): 1st, Presidio Kennels' Little Nell; 2d, W. J. Golcher's Jill; 3d, H. C. A. Sammi's Hornell Bess. Reserve, H. Y. Evans, Jr.'s Tappeta. Very high com., P. Gannon's Ada Behan. Bitches (under 50lbs.): 1st, A. B. Truman's Klot; 2d, C. A. Haight's Lady Peg; 3d, T. L. Potter's Midgat P. Reserve, J. H. Sammi's Nancy S.—PUPPIES—Dogs: 1st, J. H. Icham's Mei; 2d, W. Chapin's Rio A.; 3d, F. J. Hofling's Spence. Bitches: 1st, F. Deleau's Dora; 2d, F. C. Klein's Hulda; 3d, C. Miller's Sally.

**ENGLISH SETTERS.**—Dogs: 1st, T. J. Watson's Starlight W.; 2d, A. Hoffschneider's Hope's Rush; 3d, S. M. Eastland's Jack. Reserve, D. Winder's Cazador. Bitches: 1st, H. T. Payne's Countess Noble; 2d, E. McAndrew's Dolly Mack; 3d, Mrs. T. Higgs's Lady Blanche B.—PUPPIES—Dogs: 1st, T. Higgs's Duke; 2d, G. Hoffschneider's Leo H. Bitches: 1st, E. Pollica's Dina Lee; 2d, R. K. Gardiner's Suver G.; 3d, Payne & Robertson's Gladiolus.

**IRISH SETTERS.**—CHALLENGE—Dogs: 1st, A. B. Truman's champion Dick Swiveler. Bitches: 1st, A. B. Truman's Lady Elcho T.—OPEN—Dogs: 1st, A. B. Truman's Nemo II.; 2d and 3d, Glenmore Kennels' Sultan and Finglas, Jr. Reserve, W. G. Taylor's Rex T. Very high com., G. Adams's Redwood. Bitches: 1st, A. N. Bailey's Ruby M.; 2d, J. W. Keene's Queen of Eldare; 3d, A. B. Truman's Lightning. Reserve, Glenmore Kennels' Miss Lucy. Very high com., O. F. Brelling's Sunnyside, A. Edwards's Kelo.—PUPPIES—Dogs: 1st, G. F. Adams's Redwood; 2d, E. Dubois's Cots.

**GORDON SETTERS.**—Dogs: 1st, J. W. & H. W. Orear's Dick II.; 2d, J. Hogan's Joe Johnson; 3d, B. Boyer's Punch. Very high com., J. N. Beckman's Jim, Mrs. F. Sprague's Sailor. Bitches: 1st, J. W. & H. W. Orear's Bijou.

**FIELD SPANIELS.**—Dogs: 1st, Miss S. Schricke's Master Shina; 2d, J. Resenberg's Ben Harrison; 3d, E. T. Flint's Neb. Very high com., C. E. Wellfender's Nick.

**COCKER SPANIELS.**—OPEN—BLACK—Dogs: 1st, F. E. Miller's Woodland Duke. Bitches: 1st, J. J. Kerlin's Brontilla; 2d, Mrs. J. B. McVay's Mollie Mac; 3d, Leslie Simson's Lassie S.—PUPPIES—Dogs: 1st, W. W. Moody's California Duke; 2d, J. C. Kinciren's Dash K. Bitches: 1st, W. Barstow's Zoni; 2d, W. L. Prather's Dina P. Reserve, Al Byler's Queen Victoria. Very high com., Charles Baab's Nora.—OTHER THAN BLACK—Dogs: 1st, J. L. Welby's Nimrod; 2d, Geo. W. Alexander's Snap. Very high com., Talliesan Evans's Spot. Bitches: 1st and 3d, J. J. Kerlin's Bettie and Queenie; 2d, C. M. Selridge's Read S. Very high com., J. G. Lubben's Beaut. Puppies: 1st, J. J. Kerlin's King Muggins.

**IRISH WATER SPANIELS.**—CHALLENGE—Dogs: 1st, A. Lorschbach's Barney L. Bitches: 1st, J. H. Sammi's Nellie.—OPEN—Dogs: No entries. Bitches: Com., W. L. Prather, Jr.'s Bess.

**DACHSHUNDS.**—1st, Dr. J. R. Davidson's Fannie.

**POODLES.**—1st, Mrs. F. A. Coleman's Faro.

**COLLIES.**—OPEN—Dogs: 1st, Miss A. Pickles' Ned; 2d, Countess Valensin's Jeannet; 3d, W. Perkins' Fordinghook Challenger. Reserve, Miss D. Beach's General Shack. Very high com., C. Nathan's Duke. High com., T. H. Nevins's Tiri N. Bitches: 1st, D. W. Donnelly's Floss; 2d, W. Perkins' Fordinghook Sage; 3d, Miss D. Beach's Sunshine. Puppies: 1st, D. W. Donnelly's Moro; 2d, S. H. McIntosh's Charlie; 3d, D. W. Donnelly's Blondie.

**BULLDOGS.**—OPEN—Dogs: 1st, C. V. Miller's Boo Boo. Bitches: 2d, C. McClevery's Roxie.

**BULL TERRIERS.**—CHALLENGE—Bitches: 1st, J. F. O. Comstock's Twilight. OPEN—Dogs: 1st, W. H. Collins's Chief; 2d, J. F. O. Comstock's Adonis; 3d, C. McClevery's Peter.

**FOX TERRIERS.**—CHALLENGE—Bitches: 1st, B. Martin's Blemton Brilliant.—OPEN—Dogs: 1st, E. Cawston's Raby Jasper; 2d, H. H. Carlton's Lansdowne Desperado; 3d, J. McLatchie's Blemton Reeler.

Reserve, V. Heffernan's Lucky. Very high com., A. F. Baumgartner's Hillside Orlando. Bitches: 1st, W. H. McFee's Dauntless Suzette; 2d, J. Heffernan's De Oro; 3d, R. Liddle's Nellie. Very high com., W. G. Brittan's Bonnie Biddy, D. Shannon's Stiletto, W. H. McFee's Dauntless White Violate, J. B. Martin's Blemton Spinaway and J. McLatchie's Mission Belle.—NOVICE—Dogs: 1st, Lathrop Kennels' Inferno.—PUPPIES—Dogs: 1st, A. S. C. Blake's Golden Toy. Bitches: 1st, A. Gonzales's Langtry.

**BLACK AND TAN TERRIERS.**—OPEN—Dogs: 1st, J. F. O. Comstock's Dan. Bitches: J. F. O. Comstock's Nellie.

**PUGS.**—OPEN—Dogs: Mrs. W. J. Brittan's Royal Dusky. Bitches: 1st, Mrs. E. Katchem's Dudie.

**JAPANESE SPANIELS.**—OPEN—Dogs: 1st, C. D. Pierce's Kelo. Bitches: 1st, L. Heller's Nellie.

**ITALIAN GREYHOUNDS.**—OPEN—Bitches: 1st, J. Viera's Queenie.

**MISCELLANEOUS.**—1st, Mrs. E. Edwards's Toof's.

### Bloodhounds.

It is always interesting to read the remarks, made by different specialists in the English *Kennel Gazette*, about the improvement or the reverse in the breeds of dogs of which they are presumably best informed. Mr. Brough, who is at the head of the bloodhound fancy, affords us some interesting reading about this noble breed, especially as the bloodhound seems to be coming more into popular favor in America. The bloodhound is usually given the pride of place in the English catalogue, but owing to the difficulty in breeding good specimens and the havoc which distemper generally works in the very best kennels, the bloodhound has to a great extent been left behind in the race for popular favor. According to Mr. Brough the breed has improved very much in hound properties, the latter having until recently been sacrificed to the "fancy" for grand heads. It has been shown, however, that it is quite possible to produce good all round animals, and that a bloodhound with a good head need not be a cripple. Although there are few good judges of bloodhounds it must be a great incentive to breeders of this hound to know that their dogs have been

A. P. GILLIAM WITH MANCHESTER KENNEL CO.'S GLEAM'S SPORT.

awarded in several instances the specials for best sporting teams and braces at English shows. As these prizes are generally awarded by judges who have an eye to working construction, this is taken as an indication of the advance made in this particular direction. Now that bloodhounds are being taken up here and that there is every prospect of there being a greater demand for them, especially from the sparsely settled districts of the West, where the sheriffs are making use of them for tracking criminals, it is well that our breeders should avail themselves of the result of Mr. Brough's large experience in breeding these dogs. On the score of hound properties he remarks: "I don't know any greater mistake than to select for breeding purposes a hound whose only good point is a grand head, but who is decrepit and feeble in constitution. The head may or may not be reproduced, but the bad properties are nearly always conspicuous even to the second and third generation, and these superficial people complain that the bloodhound is a delicate animal. My opinion is that the most important matter is to choose hounds for breeding purposes that have inherited and have themselves plenty of stamina and constitution. Their head properties are of comparatively little importance if they are of families which have produced good hounds in this particular, and the longer and more consistently they have bred this property, the more likely it is to continue to be handed down. Some of the worst-headed bitches have bred some of our finest hounds." This sounds like sensible advice, and is in keeping with the plan we have continually urged our breeders to follow in other breeds, i. e., to follow up the blood lines more carefully and not breed continually to winners from here, there and everywhere, just because they are winners. It must be understood we are alluding more particularly to bench dogs.

Mr. Brough reverts to the question of delicacy with which bloodhounds are popularly credited. He admits that when a bloodhound has distemper he generally has it severely, but this may to a great extent be obviated by only breeding to sound and robust hounds, and also from time to time seeking suitable outcrosses. He believes that the severity of the distemper is due to inbreeding, and hints that as there is now a greater diversity of good blood than ever before, this should not be so necessary as it may have been formerly. A cross with the pure Southern hound he has found useful, but such experiments are, of course, expensive and reminds him of the answer made by a breeder when asked, "How do you produce such particularly fine specimens?" He replied: "I breed a great many and I hang a great many." Mr. Brough advises a pure St. Hubert hound for an outcross, if such can be obtained. He has faith in the bloodhound as a man trailer and urges breeders to train their hounds to hunt man, and take every opportunity of showing that these hounds cannot be approached for this purpose by any other hound. This is a point upon which our hound men have had considerable discussion, and we trust that something will be done this year toward solving this interesting question. This country, with its keen-nosed hounds, is the only one, probably, capable of furnishing a formidable competitor, though the very formation of the bloodhound's muzzle gives it an advantage over the usually snipy muzzle of the native fox-

hound. This is getting on to dangerous ground and we leave it to the present.

Mr. Brough, on reviewing the good hounds of the year, places the deceased Burgundy at the head, in fact says he was the best he ever saw, and "very much fear that I may not live to see his like again."

### The Bell Case and the A. K. C.

#### Editor Forest and Stream:

The article in your issue of May 26, wherein it is said that I received notice last September of the charges against me in the matter of one Martin, is incorrect. I did not receive notice of the charges A. K. C. suspended me on, the copy of charges I received containing no subject except the allegation that I had defrauded Mr. Martin in selling him a bitch warranted in whelp when he alleged she was not. On this charge the A. K. C. acquitted me, but suspended me for shipping Rejoice as Consequence, when I was totally ignorant of the wrong identity of the bitch at the time, nor did I learn it until Mr. Martin had written me most abusive letters, nor could I have corrected the mistake before the filing of somebody's charges against me on the wrong shipment of the bitch, and it seems to me to be asking too much of dogmen that they will tumble over in their haste to correct a mistake when the sufferer by it is at that very time insulting one and bringing false charges against him. I have offered through another party to correct the mistake I made and I am at a loss to know what the A. K. C. expects of dogmen. How are we to know how far to go in resisting false charges? Are we to kiss the feet of men who abuse us?

TORONTO, Can., June 4.

We have been given four different versions of the reasons and charges on which Mr. Bell was disqualified by the A. K. C. This is merely an additional proof that the sessions of the advisory committee should be in some degree public. Mr. Martin publicly claims that Blemton Consequence, advertised for sale by Mr. Bell, is his property and Rejoice is now in his (Mr. Martin's) kennel. Mr. Martin also writes as follows:

"You stated a few weeks since that the advisory committee did not find against Bell on the question of not sending the bitch in whelp; I wish to say that the bitch did not come in whelp nor did she have a premature birth on the ship. I received her at the express company's office immediately upon her arrival, and seeing that she was not in whelp put her in her crate and drove to Dr. Rowat, veterinary surgeon. He examined her and the crate and pronounced the bitch not in whelp, nor had she a premature birth recently. The express company stated that if she whelped upon the road a note of it would be made by the messenger, and no such memorandum had been made."

On what charge did the advisory committee really discipline Mr. Bell? Mr. Vredenburg says it was because Mr. Bell advertised that the bitch would be taken back if not in whelp, and when asked to do so by Mr. Martin, refused.

### Judges and Type.

#### Editor Forest and Stream:

I have read a couple of letters that have appeared in recent issues of your paper with much interest. They point out the mischief that is being done by judges putting in high places a type of dog that is far from what is recognized as the standard of the breed. This can only be the result of either ignorance or partiality; and outside of the injustice done to owners of other and far better dogs, is perplexing to the novice and unfair to everybody.

You have been to the far West championing the cause of sport, and have made a successful fight against a selfish few. Now, Mr. Editor, stay East a while and turn your eyes on the judging ring, and see if you can discover anything there that needs reform. I should hardly say discover, perhaps, for the need of improvement has been long known to every one. In asking you to take command of the movement, I feel assured that you would have a whole army at your back, of the kind that love a dog, but not for revenue only.

I will at the present time quote but two incidents of many that have come under my immediate notice, to show that some reform is needed. They are as follows:

Asking a prominent exhibitor why a certain dog that he had recently sold could do no better than c, at a recent show, when the same animal had won many prizes for him, was answered in this way, "I guess the wrong party took him into the ring."

Speaking to another equally prominent member, deploring the fact that a certain well-known judge was not seen oftener in the ring, had this extraordinary reply vouchsafed to me, "Oh, I wouldn't show under him; he's too independent."

In this instance I interpret independent to mean fair and square; one who in making his awards goes to the right end of the chain—that is, the dog end.

More independent judges are needed, and if show committees would take the trouble to find out who they are, entries would be much increased by the general public, who would not be afraid of being the "wrong party" when their pets were being passed upon.

### High Price for a St. Bernard.

AMERICANS are not paying big prices for St. Bernards these days, but our English cousins do not mean to let the prices drop in the meanwhile. On the best authority we learn that Mr. Jagger, of Honley, Huddersfield, sold Lady Mignon, counted one of, if not the best, rough bitch in England, for close on \$5,000. This bitch is not very well known on this side, so a little information as to her career may not be out of place. Though only just over two years old her show career has been remarkable. She was first brought out at Bath, last year, when under twelve months old, and there took everything before her. Since then, in a short space of a year, she has won fifty-four first prizes, specials and championship at Birmingham show. Most of these prizes have been gained at leading Kennel Club shows. The name of Lady Mignon's purchaser is to remain a secret; but her new residence is one of the "stately homes of England," and no doubt her show career is ended as her owner is content for her to grace his home only. As a worthy successor to Lady Mignon, Mr. Jagger has secured at a high figure the noted bitch Frandley Stephanie, who was put over Lady Mignon at the Crystal Palace show. Frandley Stephanie, because of maternal duties, has not had the chance of figuring much on the show bench; but when on those rare occasions she has done so, she has won the following prizes. 1893: Liverpool, first, puppy and open classes; Manchester, first, puppy and open; Barking, Cirencester and Gloucester, first and open; Crystal Palace (K. C.), first winner's class. 1894: Crystal Palace, first winner's class.

She is described as a large and well made bitch. Mr. Jagger sails for this country at the end of June.

In view of the fact that sufficient attention is not given to showing dogs in proper dog show condition, it would be a good plan if dog show committees would offer prizes to the kennelman showing his dogs in the best condition. This would lead to a healthy rivalry, if persisted in, and result in something more tangible than mere newspaper commendation. A number of dogs were shown this spring that should not have been put on the benches, and in no other similar competitions would such specimens, if allowed to compete at all, stand a ghost of a chance of winning money prizes. A dog bleeding from scratching sores, whether they be from eczema or mange, is not a wholesome sight, and its appearance on the bench should be rigidly discountenanced.

## That "Moss-Back Robber" Rule.

The action of the U. S. F. T. Club at its annual meeting in Chicago repeated the rule which made ineligible bitches which were in season, comes up again and is worthy of discussion. In connection with this matter I noticed Mr. Madison's note in *FOREST AND STREAM* of May 26. He says: "The United States Field Trial Club at its last annual meeting eliminated from its rules that old mossback robber which has for years prohibited bitches in heat from running in field trials."

It is not really such a one-sided affair as Mr. Madison's brief statement of the subject seems to imply, nor can one readily perceive wherein the old ruling was unjust, much less a robbery, if the subject is equitably considered in its full bearings.

It may be incidentally mentioned that the consensus of opinion and practice is still against the position of the U. S. F. T. Club, it being entirely alone, so far as I know, in its position in the matter under consideration, and its position therein does not express the unanimous sentiment of the club members.

It is true that if an owner's bitch is in season at the time she is to compete in a stake and for that reason is barred, it is a great hardship to such owner, inasmuch as the time, labor and expense incurred are more or less lost. The training can be estimated as of permanent value, but the entry fees are gone. So are for the time being any high expectations of wins and honors. Still the hardship is one inherent in the ownership of a bitch and entering her in a competition. It is one of which the owner has a full knowledge when he makes his entries, therefore he does so with a full knowledge of the disqualifying possibilities. It is one on which there has been a uniform ruling for many years by all clubs.

When a rule has been uniform and universal for a long time it is well to inquire carefully into the reasons for it. A change of circumstances or environment may make an old rule obsolete, or inoperative, or undesirable, or irrelevant, or whatnot. But there are certain principles and laws in the physical world which remain unalterable, and there are certain instincts and trials in animal life which remain practically the same. Usage and rules based on unalterable laws of nature were as good in the past as in the present. To be mossgrown seems an impossibility even as a figure in this matter.

While it is unquestionably a hardship to an owner to have his bitch barred from competition because she is in season, it requires no lengthy argument to establish that he should not transfer his own hardship to some other person, or to several persons. No man should profit by his own act in competing to the injury of the equity of the competition and loss to the competitors. It is a loss to them if their entries will not compete through there being present some obstructive conditions foreign to the competition, and introduced by some other competitor. They should not be required to suffer such loss. The misfortune of a competitor is his own. It should not be transferred to others. It is his own loss in the same sense as if his dog were lame, or sick, or lost, etc., and thus prevented from competing.

It has been advanced that the modern high-bred dog, in his energetic desire to seek birds in the hills, the vales, the cover, the open, the horizon, will when so working entirely ignore a bitch in season. Such is the dog of pedigree, of blood, of training—of ownership other than the ownership of the bitch in season. The modern dog is all hunt. Invariably he goes skimming over the fields, with nose high in air, seeking along promising nooks and cover for that which will afford his owner a shot. Sometimes he cuts frisky capers and says, "Ha! ha!" He never loafs, nor tires, nor quits work, nor thinks of anything but work. The strongest appetites or passions of his animal nature are all subordinate to his working pedigree and insatiable craving to work for his master. Such is the well-bred dog, so industrious and loyal to his work; so full of the potency for labor, inherited from modern dogs, is the modern dog, that he feels not the most ungovernable passion of dog nature. He sometimes stops to drink.

It is true that he will leave home, travel many miles and be gone many days to gratify his sexual desire. The same impulse appears to govern the nondescript cur; the dog proud of his beauty of race-type, and the different dogs of different breeds. The small, inefficient cur, humble in demeanor and with the constrained manner which is peculiar to a life of constant want, arrays his cunning against the strength and proud bearing of his large and well-fed rival. In color, size, ancestry and manner of life they may all differ, but in the impelling power of nature's law that the species shall not become extinct, they are as one.

At certain stages of a bitch's season, opportunity afforded, dogs will take very little notice of her, if at all. At other stages they will notice but little else. To say that a dog will not do so is to cast a reflection on his health or his soundness. A dog with such erratic notions could not be put in the stud with any serious claim for his merits as a stud dog.

Still, it is possible that by improved modern breeding a dog will be produced which will be so organized as to have no emotions or passions other than those scheduled by his master for the day or for the event. He will cease to be an intelligent organism, his instincts, passions, appetites and purposes all merging into an animated mechanism.

To have properly legislated on the matter, the rule should have been intelligently arranged to govern it in its entirety, not a dogmatic dicta which only fits one corner. The proper way and the just way to have treated the matter would have been to require the judges to pass upon it according to the circumstances, the common sense of it, if the question was raised. If the bitch appeared to be in season and did not attract the dogs, let her continue in the competition. If she attracted dogs and thus balked their competition, run her with some other bitch, and if that could not be done, run her alone, or, if the competition was at such a stage that nothing could be done to keep her in it, then retire her permanently. The man who owns a dog and the men who own dogs have certain rights which are equally important and worthy of consideration as those of the men who own bitches. With a full knowledge of the varying circumstances, discretionary powers have permitted the equitable adjustment of all cases which might occur. The old rule was curiously mandatory. Any bitch in season would not be allowed on the grounds. In one instance they must stay out. In the other, the last, they must stay in. Every case must be measured alike. The incidental circumstances are out of consideration. The very data, which should be considered by the judges to rule each individual case, are all set aside, and each one is governed by the same set law, a law, too, based on some more erroneous assumptions in respect to dogs' disposition and nature, to say nothing of the equity of a competition.

909 SECURITY BUILDING, Chicago.

B. WATERS.

Editor *Forest and Stream*:

The permission of the U. S. Field Trial Club to run bitches in season in their trials, like most questions has two sides to it.

The object of a change in the rules of any club, should be to benefit the greatest number. The change in question while protecting the bitches thus affected, works equal harm to the dogs that are drawn to run in same heats with them. One bitch in season may affect the running of two or three dogs, or the whole series may have to be changed, thus affecting the status of every dog in the stake to accommodate one and handicapping the judges with additional complications, that have enough to do already and who often fail to satisfy all, in their awards.

The argument I have seen used "the hunting inclination in dogs is too great to be affected under such conditions" is all bosh.

The natural inheritance of reproduction is stronger than any hunting instinct in animals. The human family does not prove an exception, as we see accounts almost daily where some brilliant mind has fallen—a slave to its behests. It is not to be supposed dogs have great resisting powers with their animal instincts only to restrain them, and these on the side of reproduction.

I fail to see where the change does "the greatest good to the greatest number." Let the clubs refund the entrance money paid on the bitches thus affected and bar those affected, and not introduce new complications to the already difficult problem of "picking the winner." P. H. BRYSON.

MEMPHIS, June 9.

## International Field Trials—Derby Entries.

THE field trials of this club will be held, commencing Nov. 1, on the old grounds at Louisville, near Chatham, Ont., which have been well stocked with birds. The entries are not so numerous as last year, there being only 21 against 34 in 1893. Last year there was but 9 starters, but it is expected that this year there will be nearly twice as many. All whelped in 1893.

## ENGLISH SETTERS.

FOREST KING—Forest Kennels' (Chatham and Toronto) liver and white dog (The Sultan—Gyp), February.

HANNAN—Dr. Totten's (Forest, Ont.) black, white and tan bitch (J. E. D.—Carrie T.), June 6.

MANITOBA MAY—W. B. Wells's (Chatham) black, white and tan bitch (Jacob Staff—Manitoba Bess), Aug. 17.

FOREST ESTEE—Thos. Hallam's (Newbury, Ont.) black and white bitch (The Sultan—Forest Novel), July 23.

JURY—T. C. Stegman's (Toronto) black and white bitch (Banker—Bell), April 15.

ROSEBUD—Sydney T. Miller's (Detroit) black and white bitch (Munk of Furness Sting—Toledo Queen), April 15.

KATE—Montague Smith's (Forest, Ont.) blue belton bitch (Ben—Lou Mall), May.

DICK—Montague Smith's (Forest, Ont.) blue belton dog (Ben—Lou Mall), May.

DASH ANTONIO—R. Bingham's (Windsor) black and white dog (Antonio—Lady Lucifer), Feb. 11.

## IRISH SETTERS.

MONA SCULLY—Arthur D. Welton's (Detroit) bitch (Finglas—Kate O'Shea), May.

KILLANE—Jas. B. McKay's (Detroit) dog (Kildare—Ruth), Feb. 26.

RIVER ROE—Jas. B. McKay's (Detroit) bitch (Kildare—Ruth), Feb. 26.

## POINTERS.

COUNTESS GRAPHIC—Leamington Pointer Kennels' liver and white bitch (Count Graphic—Wilkins's Nell), June.

FAUSTINA—T. G. Davey's (London) liver and white bitch (Ridgeview Faust—Peggie), June 23.

LUCY—T. G. Davey's (London) liver and white bitch (Ridgeview Faust—Peggie), June 23.

FOREST QUAIL—T. G. Davey's (London) liver and white bitch (Donovan—Forest Nell), May 5.

BUTTONS—Chas. Hicklin's (Chatham) liver and white dog (Hick—My Annie), June.

PLAIN SAM—A. Harrington's (Leamington) black and white dog (Hal Pointer—Kent's Star), April 1.

MOLE'S LOUISE—Fred Mole's (Detroit) liver and white bitch (Molton Banner—Graphic Diana), Oct. 21.

ENGARITA—R. J. Gardiner's (Chatham) liver and white bitch (Molton Banner—Graphic Diana), Oct. 21.

FOREST TURK—Forest Kennels' (Chatham and Toronto) liver and white dog (Donovan—Forest Nell), February.

## DOG CHAT.

The noted great Dane bitch Neverzell, considered by many good judges the most typical bitch of the breed that we have, whelped on May 31 a litter of eight, five dogs, by Kennel Lawrence's Earl of Wurtemburg. This should be an important addition to the fancy.

Mr J. Wallace Wakem, of Highland Park, Ill., intends going in strongly for foxhounds, for he has just purchased Blemton Stipend (sire of Blemton Stickler, etc.), Black Rock (Dominie—Black Rock Belle), Beverwyck Mooray, Beverwyck Punlass, the latter two from Mr. Rathborn, of Albany, and Suffolk Jewel. Wakem is the owner of Richmond Jessamine.

We hear that Mr. Anderson, who unfortunately did not enjoy the society of Aristocrat very long, has consoled himself somewhat for the latter's death by purchasing a son of Aristocrat that is said to be a grand young dog, named Aristocracy. His dam is a granddaughter of Sir Bedivere. This dog is not 18mos. old yet, but stands 32½ in. high and is beautifully marked. We trust Mr. Anderson will have the good fortune he deserves with this one.

"Bob" Armstrong, the hero of that little Phyllis fiction, was in town last week, and tells us that Sefton Hero is not being neglected at stud. Mrs. Humphrey Roberts, of Detroit, sent her Lassie, third at Detroit this year; Messrs. McKwen and Gibson have also bred a bitch to him, but the result of Mrs. Rand's experience has been very discouraging. She owns the Carlowrie Kennels in Denver, Col. Before the Specialty show she sent a black, white and tan bitch to Mr. Jarrett's kennels. The bitch was bred to Sefton Hero about a month since, and then shipped to Mrs. Rand. The express people at Chicago have notified Mr. Jarrett that the bitch was dead when it reached Chicago, and returned the crate. This is all the satisfaction that can be secured. They did not even send the collar as additional proof that the bitch was really dead.

It is said that the early fall show that is to be given in Saratoga will be only for five or six principal breeds, and that the saving in classes will result in good prize money being offered. If there is really going to be a show at this popular resort, it is time some preparations were being made and definite particulars given out.

The bloodhound Alchymist, imported last February by Dr. Lougest, was mated to Mr. Winchell's Burgho Daisy, May 18. The old dog went to Vermont to make the visit. He is said to be doing well in the stud, and as he is a dog showing intense quality, should have an influence for good in this breed over here.

A writer in the *Dog Fancier* sagely remarks, in speaking of color in fox-terriers, "White should predominate, brindle follow." This writer should study the standard more carefully.

We have had a number of inquiries lately as to whether in case of the bitch contracting a *mesalliance* the litter should be destroyed. In speaking of luck in breeding Rawdon Lee in his book on "The Fox-Terrier" says: "With a possibility of the bitch when in a certain condition getting loose and contracting a cross bred or mongrel alliance, care may be taken when such puppies are born in selecting one or more to keep with the bitch. Cases of superfecundation are not uncommon in the dog and there may be mongrels and pure ter-

riers in the same litter. I was told of a particularly good fox-terrier which a friend of mine desired to purchase. She, however, being a great favorite in the home could not be parted with, and her owner said, 'She is, no doubt, very nice to look at, but, unfortunately, her dam is a spaniel, and all her brothers and sisters are spaniels, too.'" Mr. Lee recites still another case. His bitch Venom, granddam of some of his best terriers, after being mated with a fox-terrier dog, formed a morganatic alliance with a Skye terrier. All the pups with one exception were Skye terriers, or, at any rate, half-bred ones. The exception was a white bitch with a lemon-marked head. Her life was the one saved but merely to keep with the dam as a matter of kindness. At four weeks old she was sold for half a crown, and ultimately developed into one of the best bitches of the day—Nellie by name, who, in due course, had at least one illustrious family, an individual of which sold for \$500, and all in that same litter, which produced this high-priced one, became prize winners and notabilities. So do not be in too great a hurry to drown the litter if your bitch does go wrong once in a while.

The English Bulldog Club held its twenty-first show May 29 to 31, and was chiefly remarkable for the defeat of Dockleaf by Guido, who also in his regular class beat Facey Romford, King Orry and Aston Lion. The judge was Mr. Berrie, who after placing Guido over pretty nearly every other dog in the show, is said to have upset the talent by placing the aged Ruling Passion over him.

The St. Bernard Princess Florence was shown at Preston, England, in a warm class and won, beating La Princesse and Frandley Stephanie. Rufford Ormondo, the collie, however, had his flag lowered by the bitch puppy Parbold-Pick-Me-Up.

The celebrated bull-terrier White Wonder is dead. This handsome terrier, probably the best all-round bull-terrier that ever came to this country, it will be remembered, was imported by Mr. H. A. Harris, of North Wilmington, Mass. At his first show at Boston he was protested for deafness; since then he had not been benched in this country. Last year he was purchased by Mr. W. J. Pegg, of Epsom, England, and owing to his infirmity, his career in that country has not been all smooth sailing. He won at Birmingham show, but was again protested; but on bringing the case before the Kennel Club, the dog was passed on Mr. Sewell's certificate, and competing at Crystal Palace in April last, he won under Mr. Shirley, who writes of him in his report as follows: "White Wonder, the novice class winner, has a beautifully shaped head, powerful, but without the least thickness, good eye, tight lips, and very clean and level from top of skull to nose; he stands well on good legs and feet, and may certainly be pronounced a remarkably good specimen. He is just a trifle flat in his ribs, and is a little short and drooping in his quarters." Such a criticism from such a judge is surely a fitting obituary for a dog that was whelped so far back as 1888. White Wonder was by Gully the Great out of Kit.

The St. Bernard Baron Rudolph is dead. He was a well-known prize winner on the other side.

The entries for the English Collie Club show number 210.

There are plenty of Skye terriers in Philadelphia these days. The noted Queen of the Skyes has eight pups by champion Sir Stafford; Bessie has seven by the New York winner Elphinstone, and Scotch Rose is nursing five. Princess May and Belle Stafford, both frequent winners, are due to whelp June 21.

There seems to be a steady movement afoot in this country and Canada looking to the enactment of laws whereby dogs will be considered as property. In many States recent decisions have been rendered in local courts emphasizing the fact that dogs are property, and purloiners and destroyers been duly punished. In Toronto, Canada, an organized effort is being made among well-known dog fanciers to have the local government declare dogs as personal property. These breeders are making every effort in this direction so that the dog thieves may be brought to account. At present a dog owner there has no redress. Mr. J. F. Kirk and others are interested in the matter, and a deputation waited on the government to urge the passing of a bill that will protect their kennels in which they have invested considerable money. At a recent meeting of the Georgia State Sportsmen's Association the sportsmen present discussed this subject. Many of them are owners of valuable animals, on which they are willing to pay taxes, if they can have them protected in that manner, so they can sue for damages in case such dogs are killed. The law they suggest is that dog owners be allowed to return their dogs for taxation if they so desire, thereby making them property. Those who thus return their animals and pay taxes on them will have them made property, while others need not do so unless they desire.

## Mr. Howard and the Handler's Prizes.

There has been a good deal written about the handlers' prizes at Louisville show. For the information of those who contend that Mr. Howard, a partner in the firm of German-Howard Pug Kennels, Louisville, Ky., and Columbus, O., should have won this prize, either local or foreign, it would not be amiss to give the number of dogs each handler was credited with. Handlers non-resident of Jefferson, Ky., and Clark and Floyd counties, Ind., Lewis 63, Thomas 51, Eberhart 46, Howard 38. Local handlers, Blankenbaker 101, Green 70, Howard 57. Neither Mr. Blankenbaker nor Mr. Howard knew what dogs they were to handle until they arrived at the show, and in one case, we think it was Mr. Blankenbaker's, the secretary or superintendent made out a list of the dogs in the handler's name. Most of the local handlers' dogs were local dogs that did not require any further attention than that which their owners gave them during the show. The action of the Louisville Kennel Club therefore was eminently fair and just to those who really did bring dogs to the show and honestly cared for them, and for whose benefit and encouragement these prizes are given. As an instance of Mr. Howard's methods in getting together a string of dogs for the Columbus show it may be well, and prove a warning to others, to shed a little light on the peculiar decision rendered by his club on his behalf and published in the kennel papers. Mr. E. Bardeoe Elliott was to judge great Danes at the Columbus show, Feb. 28 to March 3. Under date of Jan. 2, 1894, Mr. T. A. Howard wrote a letter to Mr. Elliott saying: "Another thing keep in mind, you want a good great Dane entry and you should work to that end to make you popular as a G. D. judge. Any Danes you can get to come, if entered in my names as handler, I will draw the winnings and give them to you." Mr. Elliott very properly laid this before the Columbus committee. An investigation committee consisting of Messrs. Poston, Dempsey and Bridge, then took the matter up, and their finding was as follows: "After a thorough investigation of the evidence presented (which was Mr. Howard's letter to Mr. Elliott) we find that Mr. Howard has been guilty of conduct unbecoming a member of this club, as shown in the following exhibits: 'In exhibit No. 1 we charge attempted bribery of E. Bardeoe Elliott as a judge. We also find that the above charges are further sustained as shown in exhibits Nos. 2 and 3.'" When the subject was referred to the full board, Mr. Howard explained that in his zeal to help the show and assist in getting a large entry, he had made a

mistake in wording his sentences, and assured the members that he intended no corruption. The final verdict which was published in the papers was rendered more on his statement and his appeal to their generosity and sympathetic natures than upon that convicting sentence—"Any Danes you can get, etc., etc." The above information is gleaned from a letter from Mr. Mooney, the secretary of the club, to Mr. Elliott, in which he returned to Mr. Elliott Mr. Howard's bribery letter which Mr. Elliott now has in his possession. Instead of resting here this case should have been brought before the American Kennel Club for immediate action.

Mr. Wixom, of the Hornell-Harmony Kennels, is manufacturing beagles up at Covert with alarming persistency. As a result of champion Ava W.'s visit to Oradell, N. J., where she was mated to Racer, Jr., she has five puppies, all strong and well formed. This is the same breeding as Daisy Corbett, Evangeline, etc., and is therefore carefully watched. Velda (Royal Krueger-Baby W.) has seven "beauties" by Sherry. Breezy has six by Little Wonder and Evangeline is nursing four dogs by Royal Krueger. Daisy Corbett is down with five by the same little champion. There are other bitches in whelp, but those mentioned are celebrities.

Alexander Mackenzie-Hughes took charge of Mr. Huntington's Marlborough Kennels at Inwood, L. I., on June 1. John Stokes, who, it will be remembered, has handled Mr. Huntington's dogs during the past year, will now set up a boarding kennel near Passaic, N. J.

Mr. "Debonair" Zimmer, whose fancy runs to beagles and bantams, also drops a little stray wimble every now and then in a kennel column which the *Chatham Review* holds up. This is one of his leaders and a good one, too: "Don't expect your dog to be smarter than you are. If you buy a hunter and keep him on a chain, or allow him to run the streets of a city for six months or a year, and then take him out afield and he does not do brilliant work the first day, don't misuse him. If you do not work at your trade or attend to your business for a year could you start right in and do as well as when you were in practice? Well, I guess not!"

Death of Gordon Janet.

There is not a Gordon setter breeder or exhibitor in this country who will not feel sincere sympathy with Miss S. A. Nickerson in the loss of her Gordon setter champion Gordon Janet. Janet died during parturition, June 11. She had been bred to Count Noble and whelped four pups on Friday, P. M.; on Saturday she passed a dead one and on Sunday the veterinarian discovered another one and it was decided to take it away, although the bitch was already very weak. They only succeeded in removing the head and breast and concluded to wait before operating further until the bitch could recover some strength, but poor Janet was unable to rally. She was buried with all the respect due to a dear friend, and Miss Nickerson, who was devotedly attached to her, is inconsolable. There are three dogs and a bitch puppy still living and these are fortunately with a foster mother. Janet was one of the best and handsomest Gordons of her sex seen on the American bench, and was, we believe, bred by Mrs. Dager, of Toledo, who sold her to Miss Nickerson. She was by champion Beaumont out of Belle Stephens. Janet was not merely a bench show winner but was a very fast and good worker in the field and would probably have run in the trials this fall. Her wins include first at such shows as New York, Boston, Washington, Providence, Chicago, etc. We sincerely hope that Miss Nickerson will find another Janet in the remaining litter.

Every one has heard of Mr. Walter Wellman's projected dash to the North Pole, and those interested in dogs will look forward to the result of his experiment with more than passing interest. Instead of following the example of former explorers in these icy regions by using the native sledge dogs, he secured about a hundred hardy Belgian draught dogs. The conditions under which these will labor will be vastly different to their work in the streets of Belgian towns, and picked up here and there, as these dogs necessarily were, and unused to pack work, the result seems anything but promising. Mr. Wellman's last letter to the *New York Herald*, which tells of his start for the Arctic Ocean, and which will be his last letter for some time, comments on the fighting propensities of these dogs. Some of the big dogs are apt to breakfast off their smaller companions, and regular watches have to be set to protect them in their confined quarters. Mr. Wellman had to secure a special permit to bring these Belgian dogs into Norway, as it seems no foreign dog is allowed to set foot in that country, and through this protection distemper is said to be unknown among Norwegian dogs. Even then Mr. Wellman had to keep his dogs on an island, and if a native dog managed to reach the island it had to stay there, in fact, was expatriated.

The receipt of Raydon B. Lee's work on "The Terriers" completes our set of the three volumes this well-known writer has published on "Modern Dogs of Great Britain and Ireland." Like the other two volumes, that devoted to terriers is profusely illustrated with ideal pictures of dogs of the different breeds treated of. At the outset Mr. Lee explains that in describing the terriers in all their varieties, he has endeavored to give particulars as to their working qualifications and their general character, as well as their so-called "show points," and his desire to prevent a useful race of dog from degenerating into a ladies' pet and a pampered creature, only able to earn his owner gold on the show bench, is his reason for treating so fully of him, as he is concerned in that sphere which nature intended him to occupy. The chapters devoted to fox-terriers and Irish terriers will be found very interesting, and the pictures, especially of the wires, are good. In fact, those who are interested in any particular breed will find much instruction as to its origin and history up to the present date. The names of past exhibitors and their best dogs are given, with a quantity of reminiscent matter that only one like Mr. Lee, of large experience with dog shows and dogmen of the past decade, could gather together. The work is for sale at this office.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

*Enslut, Rae, Rolf, Nan II, and Nonsense.* By Lawn Gordon Setter Kennels Chicago Lawn, Ill., for black and tan Gordon setters, three dogs and two bitches, whelped April 4, 1894, by Reginald H. (Leatherstocking-Smith's Rhoda) out of Nan (champion Argus-Laura).

*Nicotine and Merry Christmas.* By W. A. Coster, Jr., Saratoga Springs, N. Y., for orange and white English setter bitches, whelped Dec. 25, 1893, by Balzar's Duke out of Father Gerot's Tessie (Buckel ley-Jolly Nell).

BRED.

Prepared Blanks sent free on application.

*Lia-Naso of Maine.* C. Tuttle's (Portland, Me.) pointer bitch Lia (King of Kent-Daisy) to C. H. Newell's Naso of Maine (Naso of Kippen-Dela), April 6.

*Belle Noble-Dad Monarch.* C. E. Gilchrist's (Charlestown, Mass.) English setter bitch Belle Noble (Dan Noble-Rosalego) to Samuel B. Allen's Dad Monarch (Roy Monarch-Blue Jennie), May 11.

*Belle of Sharon-Woodale Driver.* W. F. Porter's (Sharon, Pa.) fox-terrier bitch Belle of Sharon to his Woodale Driver, April 18.

WHEELS.

Prepared Blanks sent free on application.

*White Queen.* C. F. R. Drake's (New York) bull-terrier bitch White Queen, May 23, eight (two dogs), by his Sailor.

SALES.

Prepared Blanks sent free on application.

*Reginald's Son and Nan's Girl.* Black and tan Gordon setter dog and bitch, whelped Aug. 16, 1893, by Reginald H. out of Nan, by Lawn Gordon Setter Kennels, Chicago Lawn, Ill., to Highland Kennels, Milwaukee, Wis.

*Singhild.* White, black and tan English setter bitch, whelped Feb. 9, 1893, by Kent II. out of Countess Addie, by A. D. Fiske, Worcester, Mass., to C. F. Fretbar, New York City.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

L. S., Pottstown, Pa.—There is no setter Spicer registered under the No. 1,577.

W. S. Lee, New York City.—We shall publish some new fan pedigree forms shortly.

J. H. C., Cincinnati, O.—The only fox-terrier Fussy registered in the A. K. C. Stud Book is or was owned by H. W. McAdams, of New York City, and is by Raffie out of Warren Lass.

J. A. B., Rochester, N. Y.—Monk's Mark is registered as owned by W. J. Baugh, Ridgeville, Ind. We do not know who owns Hoosier Ben at present. There were no Louisiana trials in 1891.

L. A. K., Black Lake, P. Q.—We do not know of any Angora cats advertised at present. The English Stock-Keeper, London, or *British Fancier*, Manchester, are the most likely journals in which to find such stock advertised.

G. R. J., Saginaw, Mich.—Please prescribe for my three-year-old Irish setter dog, which has been troubled with balanitis for the past six months. I have used an injection three times daily of sulphate of zinc, 20grs. to one pint of water; have also used a solution of acetate of lead, 1dr. to pint of water. Neither of these remedies seem to be effectual. The dog has been shedding his coat for the past three months, but the hair still comes out easily. Ans. Treat for worms. Use the following lotion, one tablespoonful to be injected two or three times a day; wash the sheath out by injecting warm water, before using the lotion:

- B. Capsi. sulph. . . . . grs. viii.
- Acid. carbol. . . . . m. vi.
- Glycerine . . . . . 3 ss.
- Aqu. acaciae . . . . . grs. iv.
- Alq. ad. . . . . 5 vi.
- Mix. Lotion. Use as directed.

Hunting and Coursing.

FIXTURES.

- Oct. 23.—New England Beagle Club, at Oxford, Mass. W. S. Clark, Linden, Mass., Sec'y. Nominations close Oct. 1.
- Oct. 29.—National Beagle Club. Geo. Laick, Tarrytown, N. Y., Sec'y.
- Nov. 7.—Northwestern Beagle Club. Louis Steffen, Milwaukee, Wis., Sec'y.

Mississippi Jottings.

MR. W. W. TITUS, of Waverly, Miss., sends in the following news notes with a bit of quaint humor attached, which—being about snakes—has been relegated to the Camp-Fire Flickerings corner:

"I am looking forward to a break in the monotony of my quiet country life in starting for the Northwest next month. 'At present I do little but squirrel hunt, and I am having great sport with the 'timber cats.' I never saw them more plentiful or fatter in my life, and hardly a day passes but what I have fried squirrel on my table.

"Fishing is said to be fine, but I have not been fishing much. I have had some very nice ones, though, from the pool in my kennel yard.

"Mulberries are ripening now. The squirrels will soon congregate on the mulberry trees, and it will then be much easier to kill them. I have been using a .25cal. Stevens rifle, and I am extremely pleased with it as a gun for squirrel hunting.

"Major Val Young was out with his pack of hounds yesterday morning, and blew his horn for me as he went by; but I very foolishly did not go, and missed hearing some musical running. He reports that they got up three foxes (reds), and the pack of fifteen dogs got split up. At the start the running was quite unsatisfactory, but one fox was soon put in the ground, and he saw one come out by him. Soon four dogs came by, running like a storm, with Old Mag in the lead about 75yds., Grady (a July) next, and the other two close on his heels, they being Nettle (a Whitlock) and Belle of Kentucky (a Bourbon Kennel hound).

"The fox made a circuit and passed the hunters again, the positions of the dogs about the same. They had not been long gone, when there came several more dogs, not saying a word, but running like scared wolves to get in with the pack after the fox which had been seen.

"Evidently this was the bunch which put the other fox to earth, and, hearing the other dogs running, had put out at their best licks to get in the race, which they soon did, and made, as George Washington, not the immortal George, but the Major's colored camp cook, would have described it, 'the welcome ring.'

"After a spirited run of about a half hour, the pack had closed up on the fox so close that it was deemed discretion to stop the dogs, lest they catch him on the ground. As he had been seen several times, it could be determined about how much lead he had on the dogs, and how fast they were closing in on him. So, to save his bacon, the dogs were stopped. Part of the dogs had, in the meantime, carried the third fox out of hearing, way up toward the town of Vinton. Late yesterday evening they had not come in, and some fears were felt that they had caught it.

"Taking into consideration the hot weather, it was a very speedy run for the pack, as they have not been in a race since early in the spring, are as soft as cotton and are entirely unfit for hard running—but probably the fox was in the same condition, so both were on an equality."

Foxhounds at Boston.

Editor Forest and Stream:

Although the great Boston show is now a thing of the past, some of its features cannot easily be forgotten. Perhaps one of the most interesting (although by no means instructive) was its Brunswick Fur Club exhibit of so-called foxhounds. Being an admirer and for many years a breeder of foxhounds, and impelled by a desire to behold some of the noted fox killers whose exploits have been depicted so much in the journals, that the blood of their victims fairly trickles down the columns of these otherwise clean sheets, I washed the blood of the last fox from my hands and hastened to "Beauville." The man who visits dog shows must accustom himself to almost anything in the shape of surprises, and I supposed that I had long since mastered this art. Yet as Old Reub said, "I declare to God, the sights I seen were enough to turn your whiskers green." Not that there was anything lacking in variety of head, oh, no! they were all on hand. There were domed heads, round heads, flat heads and square heads, triangular heads and even octagonal heads with the various combinations.

Most prominent among the curiosities were a pair of July pups, born in August and shown in April. These little dogs (I can't bring myself to call them by the dignified name of hound) looked very imploringly at the spectators and

said: "Now we think it's just too bad, even those Boston terriers over there have a standard and we think somebody ought to make one to fit us. Don't you think that the American Kennel Club ought to do as much for us?" Then I stroked their little round heads and consoled them by saying that the B. F. C. were working hard in their interests and that in the event of not being able to make a standard which would include them and the various other heads, I felt certain that the B. F. C. and the B. T. C. would become consolidated. This seemed to please them very much and they both barked joyfully with fine terrier voices, while one wagged a screw-tail and the other a ring-tail. I left them promising to do all in my power to bring about this happy union.

The next day just at "Dawn," I strolled past the benches where foxhounds should be. A cunning little dog barked me, and with his face all wreathed in smiles said, "Doc, I got it!" and sure enough there was a blue ribbon on its neck. Down the long line of foxhounds shown, was many a grand head with only a few letters of commendation over it. What should we do without judges? Yes, we are sadly in need of a foxhound standard. DR. H. T. THURBER.

PROVIDENCE, R. I.

HUNTING AND COURSING NOTES.

Mr. F. W. Chapman starts for his hunting kennels at Orland, Me., next week, and will reside there till October. From there he will make short hunting and fishing trips to some of the best resorts in the State. Deer are plentiful up there, Mr. Chapman telling us of a herd of about 75 that yarded last winter within two miles of his kennels and a 12-year-old boy shot a 200lbs. buck half a mile from where old champion Fitzhugh Lee sat contentedly chewing a piece of old horse. Mr. Chapman has erected a kennel building 30x40ft. for the dogs, in addition to his other buildings, and will wire in a space 900ft. long as an exercising ground. He intends taking a few dogs to board and train with his own, and as he is right in the heart of a good hare country, the chance seems a good one.

Mr. D. C. Luse writes us that his imported Nettlefield, by Dick Day—Camborne, whelped seven pups by Mr. E. H. Mulcaster's imported Glenkirik (Misterton—Glen gowan). This litter should turn out well. There is Misterton blood in sire and dam, and Alec Halliday on one side and Lord of Avon on the other. Mr. Luse has named two Norwegian—Dick's Darling pups, Lord Breckenridge and Lady Pollard; these he will run in the Derby and All-Age Stakes at the different fall meetings, and we shall then see if there is really anything in a name, after all.

The Merced meeting next fall is expected to be the most important gathering of coursers ever seen in California. The first prize will be a cup valued at \$500 and \$800 in cash. This should bring dogs from as far east as Kansas.

Col. North's sale of greyhounds took place at Eltham last Saturday. Particulars of this important sale will be given next week. Fullerton was not to be sold.

Dachting.

FIXTURES.

- JUNE.

- 30. Seawanhaka Cor. Race, New London to Oyster Bay.

The news that the Royal Victoria Y. C. has declined to waive the required ten months' notice and accept a challenge from Vigilant for its gold cup has been received with some indignation on this side, as unsportsmanlike, under the circumstances. For ourselves, however, we confess to a feeling of amazement, rather than anything more serious, at the folly and shortsightedness of such a course. As every one knows, the R. V. Y. C. gold cup was established in opposition to the America's Cup after the passage of the new deed of gift, and with the hope that it would be speedily challenged for. If it was really to supplant the America's Cup it made little difference who won or held it from time to time, the great point being that it should be raced for as the subject of international challenge.

At first no one turned up to set the ball rolling, and between 1889 and 1893 the gold cup was in much the same position as a yacht which has been partly launched but has stuck on the ways. Last year, however, Mr. Carroll came forward and completed the launching, and the cup is now a recognized international trophy.

In the meanwhile, through the kindly offices of Lord Dunraven, the New York Y. C. had been towed off the mud bank where it was cast away by the Cup committee of 1887, and the America's Cup was again the event of the year.

This year, with no race for the Cup on, but every probability of one for 1895, it was most essential that, in order to rival the America's Cup, the R. V. Y. C. Cup should be again challenged for; thus possibly taking the first place before another contest for the older trophy.

Vigilant's visit and challenge was the golden opportunity of the R. V. Y. C.; the possibilities of the holding or losing of the cup should not have been considered for a moment, but such a chance should have been taken up before it could possibly slip by in any way. Had Vigilant failed for it and been defeated by Britannia or Valkyrie, the re-

The discovery of the identity of the Norris was made on board the Elwell about the same time, and so light had the air become that both captains concluded it would be little waste of time to see each other on closer range. Captain George, who had his wife and child on board, and a young assistant, having launched a boat, and while both ships were within easy distance of each other, the two captains agreed to move to within easy distance of each other to speak to for a number of years, although they had seen each other's ships and exchanged signals when within sixty miles of the same position two years previously on similar voyages, when the weather was then too rough to permit of a close approach. Both these ships hail from Damarisage around the Horn, their captains belong. The Elwell had a quick passage around the Horn, and arrived at San Francisco on May 1, according to a letter just received by the captain of the Norris. She made the voyage from New York in 123 days, while the Norris occupied 141 days coming here from Port of Galle.

## Larchmont Y. C. Spring Regatta.

LARCHMONT—LONG ISLAND SOUND.

Saturday, June 9.

The spring regatta of the Larchmont Y. C., sailed on June 9, was a decided success; there were no special attractions or startling features, but the fleet of 27 starters was composed almost entirely of new or well-known yachts, and in every class the entries were sufficiently well matched to make a race worth watching. The starters were:

Name.	Owner.	Length.
Emerald.	J. Rogers Maxwell.	89.50
Ariel.	G. H. B. Hill.	83.53
SCHOONERS—CLASS D—71 to 80 ft.		
Loyal.	B. Frank Sutton.	65.93
Viator.	W. Gould Brokaw.	65.92
Agnes.	J. Norton Winslow.	59.44
SLOOPS AND CUTTERS—CLASS 6—48 to 55 ft.		
Wasp.	Lippett Brothers.	54.97
Gloriana.	H. F. Gillig.	54.67
SLOOPS AND CUTTERS—CLASS 6—48 to 49 ft.		
Minerva.	H. W. Bucknell.	45.61
Gossoon.	L. Vaughan Clark.	47.83
SLOOPS AND CUTTERS—CLASS 7—36 to 43 ft.		
Tigress.	Chas. Prior.	41.30
Eurybia.	L. Rutherford.	40.02
Drusilla.	Stephens C. Baldwin.	38.28
Mary C.	Frank Freeman.	36.12
SLOOPS AND CUTTERS—CLASS 9—25 to 30 ft.		
Madrine.	W. B. Duncan, Jr.	26.3
Water Lily.	H. W. Eaton.	20.11
YAWLS—CLASS SPECIAL.		
Audax.	Joseph Allen.	30.78
Evelyn.	W. C. Ellsworth.	27.45
CABIN CATS—CLASS 11—OVER 20 FT. RACING LENGTH.		
Mary.	W. C. Ellsworth.	29.36
Almira.	Chas. Prior.	28.62
Oconee.	C. Pierce.	26.12
CABIN CATS—CLASS 13—UNDER 25 FT.		
Win or Lose.	M. Randall.	23.5
Kittie.	Hazen Morse.	20.18
OPEN CATS—CLASS 14.		
Punch.	Arthur Clark.	20.18
Violet.	Arthur Clark.	20.00
SPECIAL SKEWEE RACE.		
Queen Mab.	Percy Chubb.	54.97
Wasp.	Lippett Bros.	54.97
Gloriana.	H. F. Gillig.	54.67
Minerva.	H. W. Bucknell.	45.61
Drusilla.	L. Rutherford.	40.02

Emerald and Ariel met for the third time this season, in the next class. Loyal, Viator and Agnes were the only boats in the class, and also Minerva and Gossoon made up two more fighting pairs. The presence of Drusilla, the Herreshoff fin-keel, as yet never fairly tried in racing, lent a special interest to the class which includes the old 35-footers; Tigress, confessedly the best of this class, being present, with Eurybia, another Ellsworth boat. The new 31ft. class was represented as yet by one boat, Mr. W. B. Duncan's Herreshoff fin-keel, a very handsome, sturdy craft, with full deck and small oval cockpit for her crew of three, carrying mainsail and jib; in default of a competitor she was compelled to seek a race in the larger class, in which were Pxyie, the ex-25-footer Water Lily and the new Webber boat Madrine. The latter is a centerboard boat of 38ft. over all, 23ft. l.w.l., 10ft. 3in. beam and 3ft. 6in. draft, with 5,000lbs. of lead in the keel and a sail plan which brings her within 25ft. sailing length. She has up-to-date ends of very good proportion, a full overhang forward and a well-shaped counter, with a straighter sheer than usual, the whole appearance being very pleasing except for a rather large cabin house necessary to give the needed accommodation. The two yawls, Audax and Evelyn, made a class together.

One of the most interesting classes of the year about New York is the larger cabin cat class, represented in this race by Mary, Almira and Oconee. Mary and Almira were the only boats in the class, and, being presumably improved during the winter. After her defeat on Monday in the Brooklyn Y. C. regatta the second meeting with Almira promised to be particularly interesting. The two smaller cabin cats, Kittie and Win or Lose, both good boats, also made a good pair, the latter having won on Monday, but as appeared later, being destined to lose this time. Violet and Punch are old rivals and fairly well matched, but had no class competitor, so to make a race for her a special skewstake was arranged, including Wasp, Gloriana, Minerva and Drusilla.

So far as the men on the yachts were concerned, with a good sailing breeze from S.W. they had nothing to complain of, nobody having a clear walkover from the start, but each with hard work before him before the line was crossed at the end, and but for two circumstances the spectators would have been disappointed. The first was the configuration of the west end of the Sound makes it necessary to lay out different courses for the various classes, and to make it worse on this occasion the start was slowly and lumberly in the extreme, yachts in the same classes being four to ten minutes apart in crossing the starting line. For the first hour of the race there was a haze over the water, and this, with the diverging courses and straggling start, made it impossible to follow the boats in detail, but as the haze cleared away, and though this included four good classes, but little could be seen of the larger schooners, the class in which Pxyie and Hourli sailed, the cabin cats or the open boats.

The regular club courses were sailed, from off the harbor, past a markboat in Hempstead Bay, thence for the larger schooners around a mark off Stamford Harbor and back over the same course, 27 miles naut., for all above class 9, around Captain's Island mark and back 26 miles; for class 9, regular and special, and for the cabin cats, around Matinickock Buoy, 13 miles, and for the open cats around Scotch Caps, 10 miles.

The S.W. wind made a reach across the three miles to Hempstead Bay, and when the start was given at 11:35, Loyal was first away with Ariel just under her, and started to tack with sheets well in. Emerald crossed eight minutes later, within a few seconds of the handicap gun, Viator and Agnes having made their way over in the meantime. The start for all other classes was made at 11:55, the little Hourli being first away and the rest straggling out over an interval of nearly fifteen minutes, no less than six being handicapped. As there was a nice breeze blowing, and nearly every yacht was under way about the line before the preparatory gun was fired, the start in the extreme and the first leg of the course was merely a procession, the boats in each class being so widely separated that a close comparison of their work was impossible. The times of the start were:

Loyal.	11 36 40	Evelyn.	12 02 15
Ariel.	11 36 50	Mary C.	12 03 34
Agnes.	11 38 45	Minerva.	12 03 49
Tigress.	11 39 23	Eurybia.	12 04 10
Emerald.	11 44 32	Kittie.	12 04 29
Hourli.	11 44 50	Mary.	12 04 50
Drusilla.	11 56 25	Handicap time.	12 05 00
Queen Mab.	11 56 53	Oconee.	12 05 00
Wasp.	11 57 31	Violet.	12 05 00
Audax.	11 58 10	Pxyie.	12 05 00
Gossoon.	11 59 23	Almira.	12 05 00
Eurybia.	12 00 03	Win or Lose.	12 05 00
Gloriana.	12 00 54	Water Lily.	12 05 00
Madrine.	12 01 18	Punch.	12 05 00

The schooners were well away before the smaller craft turned the Hempstead mark, Ariel and Emerald disappearing in the haze. A jibe was needed on the turn, with spinnaker to port, but Queen Mab and Gloriana started on the run with mainbooms to port, Queen Mab soon shifted hers and headed up for Wasp, but Gloriana ran by the lee for a long time, as though bound for Matinickock instead of Captain's Island, losing time thereby. Wasp and Queen Mab kept very close together on the run; Gossoon had the smaller Drusilla for her nearest competitor, while Minerva was well astern, in company with Tigress and Eurybia, of Drusilla's class. Under these circumstances it was difficult to form any opinion of the relative speeds until the times were taken at Captain's Island, as follows:

Queen Mab. 1 15 30 Agnes. 1 26 12

Wasp. 1 15 38 Drusilla. 1 27 45

Viator. 1 15 30 Minerva. 1 28 28

Loyal. 1 20 25 Tigress. 1 34 38

Gossoon. 1 21 58 Eurybia. 1 36 00

The actual times of the runs were:

Queen Mab. 0 57 40 Minerva. 1 00 23

Wasp. 0 55 38 Eurybia. 1 07 42

Drusilla. 1 04 05 Tigress. 1 03 38

Gloriana. 0 59 08 Gossoon. 1 00 58

Gliding round the markboat and tacking for a short hitch on starboard tack, Wasp and Queen Mab came about for a long tack across to the Long Island shore, fetching just below Matinickock. While Wasp footed faster, she did not hold quite as high as the centerboard boat, and when they finally came about at 1:50, Queen Mab had a good lift out to windward. Minerva turned the mark with the clew of her working topsail torn, and as soon as she was on the wind the whole fleet of the sail went adrift, and tacking before this was done on starboard down to leeward of Drusilla, both in the wake of Wasp, while Gossoon chose to work the north shore on port tack before crossing the tide

Gloriana had followed Wasp, but at a hopeless distance, which increased every moment on the wind. Viator on the run out had caught and passed Loyal, but on the wind the other was too much for her, and soon led the class.

After their first tack offshore, Queen Mab, though already close in, left Wasp and made a hitch inshore, which was necessarily short, a blunder which cost her heavily. When she came about she was on port tack, while Wasp, having leeward on the first tack, took all along, now swung about on the windward tack in season to meet Mab and put her about. Queen Mab was carrying a bad working topsail, an old one with a small club at the head, over a fine suit of new sails, including an angulated Laphorbe jib. The topsail was sheeted on the starboard side, and on this tack did fairly good work, as was shown by the way she walked clear of Wasp's lee, the latter, by the way, having her topsail sheeted on the port side. They stood on inshore tack, Mab continuing to gain, until Wasp, for a change, went on port tack, Mab swinging about at once, broad beam on her weather side. To the surprise of all, the performance of a few minutes before was now reversed, Wasp walking out from under Mab's lee, and going clear for a long tack offshore before making the last leg for the Hempstead mark. As before, Wasp footed faster, while Mab held a higher course; and when, after several hitches, they finally came together at the mark, Mab was enough in the lead to force Wasp to bear away to clear her. She crossed Wasp's bows, but stood in just a moment too long before tacking, and Wasp escaped the worst of the blanket and slipped around the mark in the lead. The only times taken at the Hempstead mark were:

Wasp.	2 32 05	Gloriana.	2 47 30
Queen Mab.	2 33 11	Loyal.	3 03 15
The elapsed times for this race were:			
Queen Mab.	1 06 41	Gloriana.	1 23 32
Wasp.	1 06 37	Loyal.	1 42 50

The last reach was made with balloon jibtopsails set, a pretty sight as the two raced along close together. Queen Mab finished a few seconds in the lead. The smaller classes had been timed from the markboat long before the tug came up and the large schooners were not yet visible, nor were they timed until 4 o'clock, Ariel coming in just 10m, ahead, or with a gain of over 2m. in actual time over the course, which her allowance increased to 6m. The full times were:

SCHOONERS, CLASS B—27 MILES.				
Name.	Start.	Finish.	Elapsed.	Corrected.
Emerald.	11 44 32	4 10 45	4 26 13	4 26 13

Drusilla.	11 56 25	3 38 40	3 42 05	3 15 39

The result as between Ariel and Emerald, and Wasp and Gloriana, was merely a confirmation of Thursday's race; Loyal, however, did much better than on that occasion. The distance of the two boats was increased to 10m, and the loss of the line of course rigging made the race between her and Gossoon anything but conclusive, and they are likely to meet in future races with almost as much uncertainty as to the result as in Gossoon's first year. Her new owner, Mr. L. Vaughan Clark, of Alceia, will race her in all the Sound races. Drusilla upheld the reputation of the fins by doing about what was expected against a fast modern centerboard boat of her class, beating Tigress 6m. in time and 10m. in corrected time. Six of the courses rigging, a pole mast and only the three lower sails, Tigress carrying a topmast and working topsail as well as a much larger spinnaker. Owing to none of the boats being measured the result in Class 9 is not yet known. In the yawl class, Audax gave Evelyn a hollow beating of a quarter of an hour. Almira again beat Mary, and Kittie paid off Win or Lose for Monday's race. The race was as usual well managed by the committee, Messrs. J. F. Lovejoy, Otto Sarony and G. M. Barreto.

## New York Y. C. Annual Regatta.

NEW YORK—NEW YORK HARBOR.

Thursday, June 7.

So little is expected of an annual regatta of late years that yachtsmen are apt to be contented with anything short of a complete failure; and what with a perfect day, a brisk breeze, and some pretty bits of sailing thrown in, after the failure of Tuesday, the regatta of the New York Y. C. on Thursday gave forth a thrilling event. The first meetings of Ariel and the lengthened Emerald have been looked for with considerable interest, while the renewal of the struggle between Wasp and Gloriana was also in its way important, and though they had met on Tuesday, the result was just enough uncertain to make another trial in good weather worth seeing. The starters were few, but twelve in all, as follows:

SCHOONERS—CLASSES 3 AND 4.		
Name.	Owner.	Allowance.
Emerald.	J. R. Maxwell.	allows
Ariel.	G. H. B. Hill.	3 32
SCHOONERS—CLASS 5.		
Elsie Marie.	J. B. King.	allows
Loyal.	B. F. Sutton.	7 35
Agnes.	J. N. Winslow.	14 44
SCHOONERS—CLASS 5—CRUISING TRIM.		
Viator.	W. C. Brokaw.	allows
Neaera.	H. McHarg.	6 12
SLOOPS—CLASS 6.		
Wasp.	R. L. & H. F. Lippitt.	allows
Gloriana.	H. F. Gillig.	0 18
MIXED RIG—CLASS 8—CRUISING TRIM.		
Sachem.	F. T. Adams.	allows
Queen Mab.	L. T. Callahan.	19 11

The new rule of the club was used for the first time in the classing of Queen Mab, Sachem and Eclipse together; rather an incongruous grouping, but giving a chance to each for a race. The usual courses were sailed, starting and finishing off Buoy 11, just outside the Narrows, going in and out by way of the Southwest Spit, and the larger yachts turning the Sandy Hook Lightship, while Wasp and Gloriana turned the Scotland; 31 and 27 miles, naut., respectively. The day was quite cool in the morning, with a fresh N.W. breeze which held all day, though lighter later on, particularly outside the Hook. The flagstaff may is not yet in commission, being at the Erie Basin Drydocks, preparing for a voyage to England, so Com. Morgan flew his flag from the steamer Shearwater, Vice-Com. Brown, on board of which were the regatta committee, S. Nicholson Kane, Chester Griswold and Irving Grinnell. The Iron steamer Taurus, with Lander's orchestra on board, carried the club members to the starting line.

The start was called for 11:10 for the singlestickers and mixed class, and 11:20 for the schooners, the former having five minutes to cross in and the latter ten. The tide was just turning ebb and there was a fresh N.W. breeze, giving the skippers a chance to berth their boats as they pleased for the start, and the entire fleet was about the line when the preparatory gun was fired at 11, with ten minutes before the start. Almost at the gun Gloriana, setting her clubtopsail, stood off up the Bay toward Bedloe's Island as though she had forgotten something up in that direction and gone off after it. Wasp thought necessary to follow her, and the schooners also appeared to have pressing business about Bay Ridge, though a few minutes before they had been working about the Narrows.

The little Eclipse and the schooner Sachem, of the mixed class, were wide awake and made creditable starts within the time, but Wasp, Gloriana and Queen Mab were handicapped, as were most of the

schooners, Emerald and Ariel only going over some 8 minutes after the starting gun for their class. In one or two cases there may have been some excuse for waiting to start even with a late classmate; but the start as a whole was discreditably to the fleet, and offers another reason, if one be needed, for some action on the part of committee looking to sharper and quicker work at the line. Apart from the fact that all interested in a race disappears when one boat starts 10 minutes ahead of another, perhaps in a different wind; such sluggish methods are alike discreditably to the yachts and the clubs which permit them. The start was timed:

Eclipse.	11 13 52	Ariel.	11 24 38
Sachem.	11 14 15	Elsie Marie.	11 24 54
Gloriana.	11 15 37	Loyal.	Handicapped.
Wasp.	11 16 24	Agnes.	11 25 00
Queen Mab.	11 17 23	Neaera.	11 25 00
Emerald.	11 22 30	Viator.	11 25 00

Once away, the yachts moved fast, running off with mainmast staysails and balloonforesails set, the race to Southwest Spit being enlivened by a luffing match between Elsie Marie and Loyal. The sailing between Wasp, Gloriana and Queen Mab, carrying a poor working topsail, being in "cruising trim," was very even thus far, the times at the Spit being:

Sachem.	11 54 10	Wasp.	12 02 15
Emerald.	12 00 00	Ariel.	12 02 20
Queen Mab.	12 01 30	Eclipse.	12 03 45
Gloriana.	12 01 30		

Coming for the jibe at the Spit Gloriana was still clear ahead of Wasp, while Queen Mab was close on Wasp's weather quarter, Emerald nearing the three. She passed them quickly and then Queen Mab ran the two singlestickers, Wasp dropping astern. Ariel had been coming up fast, and inside the Hook tried to pass on Queen Mab's weather, bringing on a luffing match, Ariel finally passing to windward of Mab and also of Gloriana. When off the point of the Hook there was more fun, a sharp bout between Wasp and Gloriana, the latter holding her luff until Wasp finally bore away after both were headed up the bay instead of down. Spinnakers were set to port for the final hook to Sandy Hook Lightship, Wasp and Gloriana keeping off for Scotland Lightship, the former now in the lead and gaining fast. The outer mark was timed:

Sandy Hook Lightship.				
Name.	Start.	Finish.	Elapsed.	Corrected.
Sachem.	12 54 45	Elsie Marie.	1 11 40	
Emerald.	1 00 00	Loyal.	1 15 10	
Ariel.	1 03 25	Neaera.	1 18 50	
Queen Mab.	1 04 55	Viator.	1 19 20	
Eclipse.	1 08 40	Agnes.	1 21 18	
Scotland Lightship.				
Wasp.	12 45 20	Gloriana.	12 49 50	

All jibed around the marks and hauled sheets for a beat in to the point of the Hook, and Gloriana, turning closer inshore, stood in under the beach, the ebb now running with full force around the Hook. They were glad to lower clubtopsails and set jibheaders as they struck a fresher breeze under the beach; Wasp continually gaining on her older sister. The two schooners, Ariel and Emerald, were now on the wind under favorable conditions, and the fight promised to be interesting; but the getting inside of Sandy Hook against a strong ebb and a heavy wind, which depends almost as much on chance as on skill in working the tides; and as the two were far apart at times, there was no means of gauging their exact performance. As she passed in by the Hook, still in the lead she had held all day, Emerald appeared to have gained materially on Ariel since they had left the Lightship; but after she had made several short tacks inside in the effort to reach the Spit, it was evident that Ariel was as close as ever to the finish. The bay at a great pace, and the pace was not slow, Gloriana being sadlv left astern. The new schooner, Elsiemarie, designed by Mr. Cary Smith last year, disposed of her antagonists easily when once on the wind.

The finish was very pretty, the yachts coming up one at a time, but unfortunately so far apart that there was only the stirring picture of foaming bow and swelling sail; all the excitement of a close finish was missing. The official times were:

SCHOONERS.

## Atlantic Y. C. Annual Regatta.

HAY RIDGE—NEW YORK BAY.

Tuesday, June 5.

The first of the larger clubs to sail its spring regatta was the Atlantic, on June 5, an early date, but necessary by the time of high water, 8:55 at Governor's Island, giving under ordinary circumstances an ebb tide out to the outer mark and a flood tide all the way in. The 25 starters, ranging from 85ft. down to 20 in length, were divided among ten classes, making five in each class, but there were several pairs that would have made good racing had the weather been other than what it was. These were Ariel and Emerald in the largest schooner class, the latter improved in appearance by a new and longer bow, in addition to which she had changed from black to white. In the next class were three new boats and one old one—Elsiemarie, Serkara, Loyal and Agnes. There was sufficient uncertainty as to the speed of each to lend a little excitement to their first meeting. Wasp and Gloriana made an interesting pair, each being in fine form and under new owners and skippers. Penguin, entered against them, is not only a much older boat, but was greatly inferior in outfit, especially sails. The full list of starters was as follows:

SCHOONERS—CLASS 2—70 TO 90FT.

Name.	Owner.	Length.
Emerald.....	J. R. Maxwell.....	91.3
Ariel.....	G. H. B. Under.....	83.5
SCHOONERS—CLASS 3—70FT. UNDER.		
Agnes.....	J. N. Winslow.....	75.6
Elsiemarie.....	B. King.....	75.6
Serkara.....	N. L. Francis.....	65.5
Loyal.....	F. B. Sutton.....	64.8
SLOOPS—CLASS 4—53 TO 61FT.		
Ventura.....	Col. Austen.....	60.2
SLOOPS—CLASS 4—46 TO 53FT.		
Eclipse.....	L. J. Callanan.....	55.2
Daphne.....	W. N. Booth.....	55.2
CLASS 5—40 TO 46FT.		
Wasp.....	Lippett Bros.....	55.0
Gloriana.....	G. C. Gillig.....	53.0
Penguin.....	G. C. Brighton.....	53.0
SLOOPS—CLASS 6—35 TO 40FT.		
Moccasin.....	N. D. Lawton.....	47.1
SLOOPS—CLASS 7—30 TO 35FT.		
Tigress.....	Jas. Wier, Jr.....	47.1
Daffodil.....	J. B. White.....	47.1
SLOOPS—CLASS 8—25 TO 30FT.		
Wabosso.....	H. B. Shaen.....	47.1
CLASS 9—25FT. AND UNDER.		
Madrine.....	F. N. Freeman.....	27.0
CLASS 10—CATS.		
Almira.....	J. Q. Maxwell.....	28.6
Myrtle.....	J. M. Sawyer, Jr.....	27.2
Arrow.....	J. M. Sawyer, Jr.....	27.2

The conditions and courses were: The starting and finishing line for all classes will be between Buoy No. 11 and a stakeboat anchored to southward and eastward thereof. The signals will be given from the judges' boat. The preparatory signal will be a whistle and the lowering of the club burgee for all yachts to approach the line. The starting signal for all yachts over 53ft. l.w.l. will be given five minutes after the preparatory signal, and a whistle and a red ball hoisted on the flagstaff; and five minutes later for all other yachts to start a whistle and a second red ball will be hoisted on the flagstaff. Five minutes will be allowed the yachts in each class to cross the line after the respective starting signals, and any yacht which does not pass the starting line within that period will be timed from the expiration of that time.

The course for all classes of schooners and classes 1, 2 and 3 of sloops will be to Southwest Spit, thence to Scotland Lightship, thence 5 miles S.S.W. to turning mark, and return over the same course. For classes 4 and 5 of sloops the course will be to stakeboat near Buoy No. 6 off the northern point of Sandy Hook, thence to Scotland Lightship, thence 5 miles S.S.W. to turning mark, and return over the same course. For classes 6 and 7 same as foregoing, to Scotland Lightship, thence returning to finishing line. For classes 8, 9, 10 and 11 to said stakeboat near Buoy No. 6, off Sandy Hook and return.

Yachts will be rated for time allowance according to the following system: To the square root of the sail area add the load waterline and divide the sum by 2. The result is the measurement for time allowance. Yachts sailing in cruising trim shall be rated for time allowance at 94 per cent. of their racing length. Yachts so entered must sail in ordinary cruising trim and carry their complete cruising outfit. The measurement to be obtained as provided in Rule V. of the racing rules, which rule is printed on the entry blanks.

The prizes to be sailed for are as follows: Schooners—Class 1, \$150; Class 2, \$125; Class 3, \$100; Class 4, \$75; Class 5, \$50; Class 6, \$25; Class 7, \$25; Class 8, \$25; Class 9, \$25; Class 10, \$25; Class 11, \$25. In case of only one yacht starting in any class the prize will be one-half of the amount named in the above list; and where five or more yachts start in one class a second prize amounting to one-half of the first will be given. The prizes may be received in cash or the equivalent in silver, at the option of the winner.

The morning was cloudy and threatening, with a sprinkle of rain and a light westerly air. The committee tug, the iron steamer Cygnus and the racing craft were under way in season, and all was ready but the wind, which did not come. When the starting hour, 11 A. M., arrived the fleet was lying becalmed just outside the Narrows, with a strong ebb tide. Some dropped their hooks and laid in good berths above the line, and others worked about with what little air was stirring. About 11:40 a light easterly breeze made itself felt, the yachts woke up and those at anchor got under way, and promptly at noon the preparatory whistle was blown.

Agnes made a good start, followed by Ventura, Loyal and Eclipse. Serkara, Ariel, Emerald and Elsiemarie came to the line in a bunch some 3m. after the whistle, Serkara passing outside the mark and being compelled to work up against the tide for a new start. Emerald moved very smartly at first, working clear ahead of Ariel. In such a start as this, so often seen about the Narrows, there are always some unfortunate ones who by carelessness or accident get behind the line while working about, and are unable to buck the strong ebb tide. This time there were several victims. Wasp, Loyal and Kittle came over early from Gravesend Bay, but instead of keeping up in good season allowed themselves to be carried down by the tide, flowing faster each minute, until when the whistle blew they were well down the Bay. They made a long and hard fight to get back, but the last seen of them when the fleet was well on its course, half an hour after the start, struggling for the line. Golden Hope was also left, having failed to get over. The start was timed:

Agnes.....	12 05 19	Wasp.....	12 11 46
Ventura.....	12 06 06	Daffodil.....	12 12 04
Eclipse.....	12 06 51	Penguin.....	12 12 16
Loyal.....	12 07 00	Tigress.....	12 13 00
Emerald.....	12 07 50	Madrine.....	12 13 13
Ariel.....	12 08 03	Arrow.....	12 13 30
Serkara.....	12 10 00	Gloriana.....	12 13 56
Wabosso.....	12 15 30	Almira.....	12 15 00
Moccasin.....	12 11 44	Myrtle.....	12 15 00
After crossing the port mark, most of the yachts went about, Ventura and Emerald standing down for the easterly breeze and getting well out into the bay. Ariel on the other hand hung close in to the Hospital Islands and the West Bank. Three hours of dreary drifting brought the schooners to South West Spit, where they were timed:			
Ariel.....	2 54 30	Elsie-Marie.....	2 59 45
Emerald.....	2 58 35	Loyal.....	3 02 40
Emerald had kept to the eastward until the tide had been too much for her, while Ariel, holding as far as possible to the westward, managed to get by the Spit Buoy easily with a good lead. After some saw work, with Wasp for a time some distance in the lead, Gloriana took first place near the Hook, holding it all through the race. The times at Buoy 6 were:			
Arrow.....	2 37 30	Moccasin.....	2 46 50
Almira.....	2 39 00	Wabosso.....	2 48 00
Gloriana.....	2 40 00	Penguin.....	2 49 30
Wasp.....	2 44 00	Ventura.....	2 49 30
Myrtle.....	2 45 00		

Once outside, with a gentle S.W. wind and smooth sea, the yachts began to sail a little more freely, shining brightly in a blue sky, and the day was pleasant enough even for July. The yachts were set for the reach to the Scotland, the times taken there being:

Gloriana.....	4 06 00	Moccasin.....	5 25 50
Wasp.....	4 21 00	Tigress.....	5 45 45
Ventura.....	4 50 00	Daffodil.....	5 54 15

The schooners could not be timed here, and the only times taken until the finish were at the outer mark, Gloriana 5:09:00, Wasp 5:23:40; nothing was visible of the race in which was marked by a wind squall from N.W., followed by a steady northerly breeze, making a beat home. The official times were:

SCHOONERS—CLASS II.	Start.	Finish.	Elapsed.	Corrected.
Emerald.....	12 07 30	Did not finish.		
Ariel.....	12 07 30	5 40 20	8 33 17

## Hudson River Y. C. Regatta.

NEW YORK—HUDSON RIVER.

Saturday, June 2.

The Hudson River Y. C. sailed the first regatta of the season on June 2, the course being a 12 mile triangle on the Hudson River, off 92d street. The wind was moderate, from S.W., and the times were:

Class A—Cabin Sloops.	Elapsed.	Corrected.
Lottie, J. Drew.....	3 10 48	2 40 12
Hazel, Mr. Tredwell.....	Did not finish.	
Ivy L., Mr. Larsen.....	Did not finish.	
CLASS B—Cabin Cats—25ft. and over.		
Henry Grey, George Garland.....	2 23 00	2 25 48
CLASS C—Cabin Boats—Under 25ft.		
El Freda, W. Pink.....	1 18 55	0 59 42
Win or Lose, W. F. Kendall.....	1 46 45	1 23 43
CLASS D—Open Sloops.		
Clara S., W. Silger.....	2 51 04	2 11 38
Agnes W., Mr. Kennen.....	2 23 45	3 36 18
Helma, Mr. Kirschtner.....	Did not finish.	
Clara A., Mr. Berry.....	Did not finish.	
Lizzie F., Mr. Flynn.....	Did not finish.	
CLASS E—Open Cats—30ft. and over.		
Pauline B., Mr. Raymond.....	3 05 55	2 39 59
Moore, R. Dick.....	3 14 10	2 39 20
Cisne, H. H. Hester.....	3 23 35	2 46 18
Golden Rod, Mr. Lack.....	Did not finish.	
Katie R., J. S. Smith.....	Did not finish.	
CLASS F—Open Cats—Under 20ft.		
Mosquito, Mr. Higgle.....	1 42 25	1 23 09
Day Off, Mr. Maloney.....	3 21 15	2 00 27
H. C. Miner, Mr. Rae.....	1 42 40	1 23 24
March, Mr. Robinson.....	2 19 30	1 57 13
Adell, C. Rae.....	Did not finish.	
C. T. Willis, Mr. Nicalos.....	1 47 05	1 27 23
The winners were: Class A, Lottie; Class B, Henry Grey; Class C, El Freda; Class D, Clara S.; Class E, Pauline B.; Class F, Mosquito.		

## Corinthian Y. C., Ninth Annual Regatta.

SAN FRANCISCO—SAN FRANCISCO HARBOR.

Wednesday, May 30.

WEATHER clear. Wind light. Tide,  $\frac{1}{2}$  ebb, balance of race flood. The times were:

## The Atlantic Y. C. Cruise.

The following general orders governing the annual cruise of the Atlantic Y. C. have been sent out to members:

FLAGSHIP WATER WITCH, A. Y. C.,  
June 8, 1894.

## GENERAL ORDERS No. 3:

The fleet of the Atlantic Yacht Club will rendezvous in Larchmont Yacht Club Harbor on the afternoon of July 3 for the annual cruise. A meeting of the captains will be held aboard the flagship at 8 o'clock. No other notices necessary and your presence is earnestly desired. The Larchmont Club very cordially extends to the Atlantic Club the hospitality of its house.

Wednesday, July 4.—Permission is given to all captains to enter their yachts in the Larchmont regatta, and you can aid in making their race a greater success by so doing. In the afternoon the fleet will sail for Oyster Bay (time of start to be determined later), anchoring off the Seawanhaka Corinthian Yacht Club House. This club also cordially invites you to avail yourself of its hospitality.

Thursday, July 5.—The fleet will sail for Morris Cove, anchoring off Pequot Club.

Friday, July 6.—The fleet will sail for Duck Island, anchoring behind breakwater.

Saturday, July 7.—Fleet will sail for New London, anchoring off A. A. Myers, near the Pequot House.

Sunday, July 8.—Remain at anchor. Divine service on the flagship at 10:30 A. M.

Monday, July 9.—The fleet will run to Shelter Island, anchoring in Deering Cove.

Tuesday, July 10.—Extension of cruise, gig races, etc., to be decided by the captains.

Provisions for yachts in cruising trim will probably be arranged from port to port, a prize being given to winners in each day's run. Please provide yourself with your racing number, which you will find in club book for 1894. By order of the Commodore.

CHAS. T. PIERCE, Fleet Captain.

## Steam Yacht Margaret.

The twin screw steam yacht Margaret, designed and built by Chas. L. Seabury & Co., New York—Hudson, for Mr. John H. Rutherford of New York, was launched on June 1. Her dimensions are: Length over all 75ft., l.w.l. 65ft., beam 11ft., draught 4ft. 6in.

The bulwarks are 12in. high above deck, from the after end of saloon, over saloon, engine room to the forward end of galley. The saloon is 14ft. long, finished in white and gold panel work. A state room is arranged directly forward of the saloon on the port side with a large double berth, with drawers under it, and a dressing case with drawers and mirror fitted. A toilet room is arranged on the starboard side forward of the saloon, with entrance from stateroom and saloon. Directly forward of the toilet room is arranged a small room with shelves and books, and with a sliding door connecting with the stateroom. This apartment is used as a wardrobe.

The machinery consists of two Seabury triple expansion engines of latest design, actuated by a Seabury patent safety water tube boiler, fitted with all necessary appliances. The galley is forward of the engine room, fitted with a range, sink and pump; the smoke pipe is connected with main smoke funnel. Directly forward of the galley is arranged the forecastle or crew's quarters, with accommodations for six persons. Forward of the crew's quarters is the crew's toilet room. These apartments have good light and ventilation. The deck is flush forward with deck room on either side of house, also large after deck. She will carry two boats on davits, etc. Her speed is fourteen to fifteen miles per hour. She will be used by Mr. Rutherford on Lake Champlain and vicinity.

Unquowa, steam yacht, has been chartered by O. B. Jennings to Mr. Ross, of Montreal, and is fitting out for that port at Port Jefferson.

## Vigilant's Passage.

It will be remembered that throughout her long passage last fall, Valkyrie was not once definitely reported until she was fairly at Sandy Hook. Vigilant, on the contrary, seems to have found the North Atlantic fairly crowded, as she has been repeatedly spoken since leaving the Hook. She was reported as passing out to sea at 12:40 A. M. on June 1, and at 8:30 she was sighted by the tank steamer Northern Light, off Shinnecock, and at about noon, off Montauk Point, by the Slavonia, and at 2:30 P. M. by the Paris. Next day, June 2, at 4:38 A. M. she was sighted by the steamer Rhaetia, in lat. 40° 55' long. 68° 17'; and at 11:30 A. M., in lat. 41° 10' long. 67°, by the Anchor Line steamer Furressia; while six hours later, in lat. 41° 19' long. 66° 28', she was sighted by the steamer State of California, the wind being moderate, weather hazy. She had then been out about forty hours, and had made some 330 miles. On June 3 she was not reported at all, but on June 4, in lat. 42° 10' long. 61° 06', she was sighted by the Dutch steamer Charlois, the wind being light, direction not given, and the yacht heading east under full sail. On the same day, presumably a little later, she was sighted by the tank steamer Washington, lying becalmed in lat. 42° 16' long. 61°. This makes a total run of 600 miles in between three and four days, with a good promise of a quick and pleasant termination to the voyage. Atlanta has reported at Fayol, for coal, on June 11.

## MODEL YACHTING.

The following challenge appeared in the Philadelphia Call of June 2: Having heard that the Philadelphia Model Y. C. claim to have the two best model yachts in the world, owned by Messrs. Frank Mitchell and Chas. C. Dulin, I wish to state that I, the undersigned, also claim to have a steam model yacht which will hold its place in any company.

Therefore, I challenge Messrs. Frank Mitchell and Chas. C. Dulin to a fair and honorable race at any time and distance they name, either for sport, money or cup.

I was a race, not an exhibition, as all former yacht races have been between model steam yachts of late.

SAMUEL F. PAYNE, W. E. M. Y. C.

No. 716 GREEN STREET.

Capt. Lewis R. Youngs, the Bridgeport spar maker who challenged E. Stern Wheeler to a race on the Sound with model yachts, was met by Mr. Wheeler in a contest off Hendrick's Point, near South Norwalk on June 5, and the Saugatuck boat won with comparative ease. Each model measured about 5ft. over all. Captain Youngs's craft was intended as a light-weather boat and insisted on luffing every time she encountered a slightly approaching stiff breeze. The miniature yachts imported from Germany and owned by Lawrence and Robert Crawford, made of copper and containing airtight compartments, although not nominally in the race, sailed around the Bridgeport and Saugatuck boats with amazing speed. A model yacht race in which there promises to be fully thirty competing boats will be sailed near Bridgeport early next month. Yachtsmen all along shore, as far east as New London, are interesting themselves in the race.

GLENWOOD LANDING, L. I., June 10.—Editor Forest and Stream: I inclose copy of a challenge which I would be obliged if you will publish in this week's FOREST AND STREAM. G. GRIFFITH CLAPHAM.

## CHALLENGE TO MODEL YACHTS.

To Wm. G. Newman, Chairman Regatta Committee Douglaston Y. C.:

In the interest of model yacht racing I hereby challenge any model yacht or yachts (indorsed by Douglaston Y. C.) to sail my yacht Gracie a match race of one half mile dead to windward or at near the Douglaston Y. C. house on either Friday, June 22, or Saturday, June 23, for a prize to be heretofore decided on by the regatta committee of the club. Time allowance and other regulations to be according to rules of A. M. Y. C. The only condition I make is that my competitor or competitors shall not have a waterline length exceeding 43in., which is the length of my yacht. G. GRIFFITH CLAPHAM.

## The Eastern Y. C. House.

From the Boston Globe.

MEMBERS of the Eastern Y. C., who have not seen the club house since last fall, will have to take a second look at the building to make sure that they are in the right place. The club house as they knew it is still there, but additions made during the winter and spring change its appearance in a most marked degree, and any member may well be excused for a second and more searching look as he approaches it from either the harbor or the neck side.

To the southwest elevation of the house has been made an addition of 20'x50ft., rising the full three stories, and matching the older building in every detail of design and finish. The addition runs across the southwest has been built a one story and a basement building, which are a fine billiard room, a laundry and a complete electric light plant. The detached building matches the big house in style, and, with the addition, gives the club as roomy and convenient quarters as the most exacting member could desire.

The addition to the main building gives in the basement a new, large and well-lighted kitchen, a large refrigerator room, a cold storage room and a couple of smaller store rooms. The old kitchen makes a good servant's hall.

In the first story an addition of about 725sq. ft. is obtained to the dining room, and the new portion with its large fireplace, recessed sideboard and big bay with large single plate windows

Open to teams of four men from any club or members of the State

Elliott and Helkes.

DAYTON, O.—J. A. R. Elliott of Kansas City, and Rolla O. Helkes of this place, shot a 100-live-bird match May 28 in as pretty a shooting ground as traps were ever set in.

Conditions were 100 pigeons each man, \$100 a side, Association rules. Elliott won easily by the score 96 to 90.

Ferd. Van Dyke of Dayton, N. J., was chosen referee, and the FOREST AND STREAM representative was made score keeper. Credit for the admirable ground arrangements should be given S. S. Troup and Dolph Sander. There were nearly 1,000 people on the grounds when Elliott won the toss and stepped to the firing point for the first bird, which he killed with first shot.

Elliott,.....1222222122222222221121211222221121222211012112  
Helkes,.....2221222112121122222112121112221101212222202-96  
.....3210121100212222222221122221102221001101221122  
.....01212121112121112111111111111111112222112-90

Elliott used a 12 Greener, 7bs. 2oz. Winchester Leader shells, E. C. powder, 1½oz. No. 7 chilled shot. He started off with a run of 43 kills, then lost an old red straightaway, scored another run of 44, his eighty-ninth, black right-outgoing, died out of bounds. His ninety-sixth, a left-incomer, died out of bounds. He lost the ninety-ninth, left-outgoing, black old bird, carried the shot over the fence.

Helkes shot his Winchester repeater, U. M. C. Trap shell, 8½drs. Bogardus here Sept. 1, next to shoot Eli. Went to of this place 100 live birds each, under Bogardus rules, gun below elbow until the bird is on the wing, and any bird that drops within 10yds. of the trap to be scored lost.

There will probably be a purse offered to bring Elliott here again to shoot against Helkes again, 50 artificial targets and 50 live birds each man, for a purse of \$300. Arrangements are also under way to have Bogardus here Sept. 1, next to shoot Eli. Went to of this place 100 live birds each, under Bogardus rules, gun below elbow until the bird is on the wing, and any bird that drops within 10yds. of the trap to be scored lost.

BROWN.

Wood Powder Gun Club.

ORANGEVILLE, Md., June 7.—No. 1, 10 Keystone target, 5 traps, entry \$1, A. S. A. rules:

J. A. H.

A New Smokeless.

CHICAGO, Ill., June 4.—At the Illinois State shoot I saw a few shells loaded with a powder which is certainly a new thing for the American shooter. It has not yet even a name, and the firm who will manufacture it will no doubt be surprised to see this mention in print, for they have been conducting their experiments in secret, and will probably not announce any name for the powder for a week or two yet.

The powder is a German invention, which has been bought by Lafin & Rand, the well-known powder manufacturers. They will claim for it that it is not a nitro powder, but that it is free from smoke than any nitro. I cut open a shell loaded with it. The powder is of a purplish blue color, with grain larger than E. C., and as confined in the shell felt spongy to the touch. I fired a couple of loads of it, and the recoil was that of a good stiff E. C. load. There seemed to be no perceptible smoke, so far as the shooter could tell. Messrs. Lafin & Rand will no doubt tell the remainder of this story later on. I suggest they name their powder the FOREST AND STREAM powder. Then it will always be ahead.

E. HOUGH.

Among Southern Trappers.

THE fourth of the series of contests for the silver water service by members of the Charlotte (N. C.) Gun Club made a change in the standing of some of the contestants, allowing Carson to take second place from Anthony. The scores were: Carson 44, Todd 42, Stokes 42, Anthony 39, Dodge 37. The men then rood as follows on breaks: Todd 220, Carson 315, Anthony 212, Stokes 204, Dodge 201.

Putney Rod and Gun.

PUTNEY, Vt., June 7.—The following scores were made at the weekly shoot of the Putney Rod and Gun Club. The afternoon was cloudy and a stiff breeze from the northwest blew across the traps, making the flight of the targets very erratic, which accounts for some of the poor scores made. In addition to our local members Mr. Henry Warren of the Boston Target Co. was with us. He is a member of our club. Mr. Warren was badly handicapped by not having his gun with him. The one he used did not hang to suit him. Fishing thus far has been rather poor, but the reports about squirrels and ruffed grouse lead us to think that the shooting next fall will be the best for several years.

Nos. 1 and 2 at 5 birds, Nos. 3 and 4 miss and out:

W. E. A.

Missoula Rod and Gun Club.

MISSOULA, Mont., June 3.—Fifteen singles, known traps and angles, 16 and 18yds. rise, as usual, were the conditions of to day's medal shoot of the Missoula Rod and Gun Club. Champion Bob Rogers, who for a couple of weeks has been detained at Wallace, Idaho, by railroad washouts, came in yesterday by means of a railroad bicycle which he had the pleasure of pumping for about eighty miles. In consequence of the effects of the unusual exertion required to accomplish the trip he was not in the best form to-day and made his poorest score for this season. Harry Stephens, one of the neatest handlers of the double gun in the Northwest, and who has been shooting out of form all season, fell back into line to-day and carried off the gold medal with but a single miss. T. S. Jones retained the silver medal with a score of 10. Scores follow:

Class A.  
A Harry.....11110111111101-13 Lieut Devo1.....10001101011100-8  
J P Menard.....0111110111010-11 W P Brayton.....101000011101010-8  
R Rogers.....11001111110011-11 H A Stephens.....11111111011111-14

Class B.  
T S Jones.....10110001101111-10 F P Kern.....10000011010000-5  
F Comes.....110000011011010-7 F H Woody.....1000010101011-8

This week's team shoot was at 15 singles, unknown singles, J. P. Menard captaining one team of six and H. A. Stephens the other. Score of Menard's team was 53 and Stephens's 50.

W. C.

Eaton Gun Club.

EATON, O., June 4.—The Eaton Gun Club held its regular monthly shoot this afternoon, after a lay off of two months on account of not having suitable grounds to shoot on. There were seventeen shooters present out of a club of twenty-five members. On account of not having had any practice the score is not to the usual standing. Twenty-five blue rocks, 5 traps:

E A Deem.....16 C B Cokfair.....4 A A Churchill.....18  
W H Bucke.....12 S O Hunt.....15 F P Filbert.....15  
R Appleby.....10 W Deem.....20 C Brewer.....15

EATON GUN CLUB.

Belfast Gun Club.

THE first annual tournament of the Belfast (Me.) Gun Club will be held June 20 and 21. The programme calls for a generous prize list and the shooting will be open to all.

Paterson Gun Club.

WILLARD PARK, June 5.—Event No. 1, 5-bird sweepstake, Hurlingham rules, entry \$3:

Morfe (30yds).....20220-3 Hopper (28).....01210-3  
Smith (29).....2121-5 Morgan (28).....11221-5  
E George (28).....2220-4 Wright (29).....21220-4

No. 2, club shoot, 10 birds:

2 2 2 2 2 2 2 2 2 2 0-9 Morgan (28) 1 1 1 1 2 0 2 2 2 1-9  
2 2 2 2 2 2 2 2 2 2 1-5 Wolfe (28) 1 2 1 1 1 1 0 1 2 8  
2 2 2 2 0 0 1 2 1-7 E George (28) 1 2 2 2 1 2 1 0 1 8

Hopper (28).....1 1 0 2 2 1 2 1 1 1-9

No. 3, sweepstake, miss and out: Morfe 6, Wright 0, Smith 7, Hopper 6, Morgan 2, E. George 2, Bunn 0.

No. 4, same conditions: Morfe 20, Wright 0, Hopper 20, Morgan 1, E. George 1.

No. 5, handicap sweepstake, entry \$3, 5 birds, Hurlingham rules: Morfe 5, Wright 5, E. George 5, Morgan 4.

No. 6, miss and out: Morfe 3, Wright 3, E. George 2.

Weather fine, birds a mixed lot, some extra fast ones. Boyle failed to come to score. The shooting of Hopper was grand for a young shooter, as you will note in score sheets. He tied Morfe in club shoot and also in the miss and out sweeps that followed. In third sweep Hopper and Morfe tied for second money and carried it over to fourth sweep, where they both shot at and killed 20 each, only giving up when shells ran out.

DUTCHY.

Emerald Gun Club.

NEW YORK, June 3.—The Emerald Gun Club will hold their first annual tournament on Oct. 22, 23 and 24, at targets and live birds at Louis Miller's Dexter Park and claim the above dates.

GEO. V. HUDSON, M.D., Rec. Sec'y.

Knoxville in 1895.

KNOXVILLE, Tenn., June 5.—The Knoxville Gun Club will hold its fourteenth annual tournament May, 1895, and add \$1,500 spot cash to the purses.

S. VAN GILDER, Capt.

West Newburgh Gun and Rifle Association.

NEWBURGH, N. Y.—We intend to hold our tournament on Oct. 3, and 5, the last day to be devoted entirely to live birds.

WM. C. GIBB, Sec'y.

Answers to Correspondents.

No notice taken of anonymous communications

W. L. S., Boston, Mass.—There is good fishing in the neighborhood of Marblehead or round into the bay in the neighborhood of Peabody and Danvers. But land is held pretty high within the distance from Boston you mention. Especially is this true of the South Shore.

S. S., Wilkes Barre, Pa.—Will you kindly advise me as to the best bait for carp? Ans. Dough balls made by mixing white bread crumb paste with cotton are commonly used. Wasp larvae, grains of wheat or barley or worms are also good bait. It is a good plan to prepare the spot one wishes to fish beforehand by "ground baiting." We do not know the compound.

W. R. P., Lawrence, Mass.—A and B shoot 15 shots with a rifle. Each takes a rifle and starts shooting at the same time. The one that makes the best score in the quickest time takes the money. Now A was two points better on the score, but B was two seconds quicker in the time. Who wins? Ans. This cannot be determined after the shooting, in the absence of definite rules fixing values for time and points.

H. S., Luberne, Minn.—What kind of a sight would be the best for wing and glass ball shooting? Ans. If using open sights have your rear sight flat on top with a shallow nick or platinum wire to show the center. The best pattern for a front sight is something which presents a square surface to the eye, as with a pointed sight it is very difficult to get the proper fineness instantly. Lyman sights are very good for quick shooting.

**YALE MIXTURE**

ISAAC WALTON would have been a smoker could he have had this tobacco.

A 2oz. trial package sent post-paid for 25 cents.

MARBURG — BROS. —  
THE AMERICAN TOBACCO CO. Successors  
BALTIMORE, Md.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where we get back a good deal more than cost of catalogue and postage.

ABBEE & IMBRIE,

18 VESEY STREET, NEW YORK CITY

**MARSTERS HAS WORMS**

Sand Worms 12 and 15c. per doz. White or Blood Worms, 25c. per doz.

I am with you against with lower prices for Fishing Tackle. I find by experience that putting down the prices and not decreasing the quality, it increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at \$1.19 until all are sold. These rods are all nickel mounted, solid reel seats, silk wound, extra tip, complete in wood form and will give satisfaction.

Length and weight of the Fly Rods are: 9ft., 6oz.; 9½ft. 6½oz.; 10ft., 7oz.; 10½ft. 7½oz.; 11ft., 8oz. Reel seats below hand.

Length and weight of the bass rods are: 8½ft., 9oz.; 9ft., 10oz.; 9½ft., 11oz.; 10ft., 12oz.; 10½ft., 13oz. Reel seats above hand.

No. H—A special lot of Hard Rubber and Nickel, Raised Pillar, Multiplying Reels with Balance Handle and Side Spring Click, 40yds., 63 cts.; 60yds., 78 cts.; 80yds., 88 cts.; 100yds., 98 cts.

Any of the above reels sent by mail for price and 10 cts. extra for postage.

No. E—Special lot Hard Rubber and Nickel Raised Pillar Click Reels, 40yds., 38cts., 60yds., 48cts. Sent by mail 5cts. extra for postage.

No. C—Nickel-Plated, Raised Pillar, Multiplying Reels, with click and drag and screen oil cup, 40yds., 58c.; 60yds., 63c.; 80yds., 78c.; 100yds., 88c.; 150yds., 98c. 10c. extra for postage.

Single Gut Leaders, mist color, 1yd., 20c. per doz.; 2yds., 40c. per doz.; 3yds., 60c. doz. Double Gut Leaders, mist color, 2yds., 75c. doz. Hand Twisted Gut Leaders, 10c. each, 90c. doz.

A special lot of Trout Flies at 25 cents per dozen assorted, sent by mail 1 cent per dozen extra for postage.

A special lot of Bass and Pickerel Spoons at 5 cents each sent by mail, 1 cent extra for postage.

All kinds of Hollow Point best quality Hooks snelled to single gut 10 cts. doz.; double gut, 15cts. doz.; treble, 20 cts. doz.; four ply, 25 cts. doz. 1 cent extra per dozen for postage.

300ft. Braided Linen Reel Line on Block, 4 cts.; 300ft. of Hand-Made Linen Reel Lines on Block, 9 thread, 38 cts., sent by mail 5 cts. extra for postage.

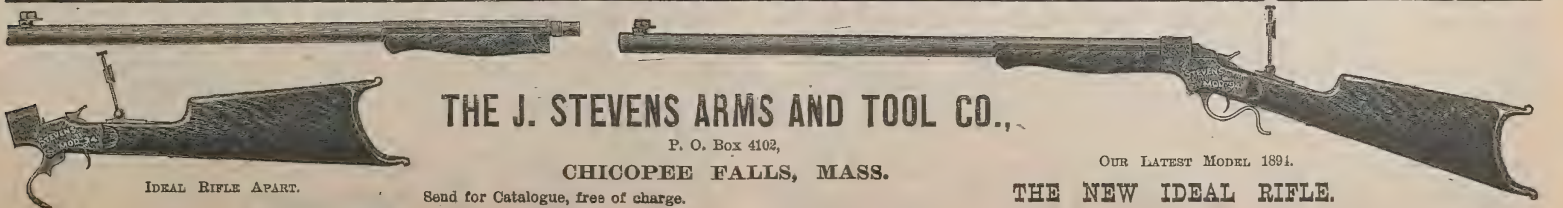

Brass Box Swivels, all sizes No. 1 to No. 12, 15 cts. per dozen, sent by mail 1 cent per dozen extra for postage.

Special lot of best quality 100ft. Linen Reel Lines, 8 cts., 200ft., 15 cts.; 300ft., 22 cts.; 3 cts. extra for postage.

OUR LATEST MODEL 1891.  
THE NEW IDEAL RIFLE.

## PRICE LIST

### Shells Loaded with "Walsrode" Smokeless Powder and Wads Only.

Climax or Blue Rival.....	12-bore,	\$1.00 per 100;	\$16.00 per M., net.
U. M. C. Co.'s Special, "Walsrode" shell (No. 3 primer).....	10 "	\$2.25 "	\$20.00 "
Imported "Walsrode" or "Eley" shells.....	12 "	\$2.50 "	\$25.00 "
	10 "	\$2.75 "	\$27.50 "
	12 "	\$3.00 "	\$30.00 "
	10 "	\$4.00 "	\$40.00 "
Add for shot to all above shells.....		.60 "	\$ 6.00 "

The "WALSRODE" SMOKELESS POWDER has made thousands of warm friends in this country who prefer it to any other explosive on the market.

TO SPORTSMEN WHO WISH TO LOAD THEIR OWN SHELLS we can offer "Walsrode" powder in cans that will load 120 12-gauge shells at 35 cents each.

WALSRODE POWDER MEASURES, which must invariably be used, as the Walsrode powder is about three times stronger than black powder, at 30 cents each.

PAMPHLET with full loading instructions and testimonials from the best known shooters in England, sent upon application. We can also furnish

WALSRODE SMOKELESS POWDER FOR SPORTING RIFLES.

Price per can containing 3,500 grains avoirdupois, 90 cents. Loads for Sporting Rifles as recommended by the Walsrode Smokeless Powder Co., furnished upon application. Address the sole agents,

## Fly-Fishing & Fly-Making

FOR TROUT, BASS, SALMON, Etc.

By J. HARRINGTON KEENE.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, N. Y.

## Favorite Flies and their Histories.

By MARY ORVIS MARBURY.

MRS. MARBURY is thoroughly enthusiastic over her subject, and after an introductory essay on "Insects, Natural and Artificial," etc., she gives the history of the various favorite flies, accompanied by letters from anglers relating to their use. Two or three years were spent in collecting information in this way. The kind interest shown by fellow-fishermen in cordial replies giving their knowledge and opinions was both surprising and delightful, and awakened warmest gratitude. These letters are records of actual experiences, and conclusions deduced from the same; and they cannot fail to be of great assistance to any one who may wish suggestions regarding new waters. The colored plates depict 17 hackles, 18 salmon flies, 48 lake flies, 185 trout flies and 58 bass flies, the comprehensive character of the collection, and the value of the detailed comments on each of its 291 flies, will be more apparent. . . "It is destined to remain for generations to come," says *Forest and Stream*, "a prominent landmark in angling literature. The fly-fisherman of to-day who does not possess it lives below his privileges."

Square octavo, 522 pages, 32 colored plates, 6 engravings and 8 reproductions of photographs. Price \$5.00, postpaid.

FOREST AND STREAM PUBLISHING CO.

## "Forest and Stream Animal Series."

We can supply full sets of the seventeen illustrated supplements which

have been printed from time to time in FOREST AND STREAM, giving portraits of American wild animals. The subjects are: Deer, Moose, Woodland Caribou, White Goat,

THE BAY LYNX.

THE CANADA LYNX.

Mountain Sheep (young), Antelope, Gray Wolf, Panther, Ocelot, Canada Lynx,

Bay Lynx, Fox, Coyote, Coon, Forest and Stream's Grizzly, Group of Elk. Each is on a sheet 11x16 and is suitable for framing.

THE OCELOT.

THE PANTHER.

The entire set of 17 will be

sent postpaid, in a tube, for one dollar. They are not sold separately. Address:

The FOREST AND STREAM PUBLISHING CO.

## FOR GUNS-REVOLVERS-RIFLES AND ALL METALS

## GUNOLEUM

Lubricant and Rust Preventive COMBINED.

IT NEVER GUMS OR DRIPS, an advantage not possessed by any other lubricant in the world.

An indispensable article for all kinds of Fire Arms, Fine Machinery, Gun Locks, Bicycles, Camp Kits Surgical Instruments, Embalming Instruments, Cutlery, Brass Work on Yachts, Copper and Steel Plate, etc. In all respects the very best preparation for any metallic surfaces where a non-gumming lubricant and rust preventive are required.

IF YOUR DEALER DOES NOT HAVE IT, Send 25c. for large Collapsible TUBE by return mail. Address all communications to The CHARLES WILLEY MFG. CO., Bay Shore, L.I., N.Y., U.S.A.

## DUCKING SCENES FOR THE WALLS OF YOUR ROOM.

Zimmerman's Celebrated Water Colors.

"A Side Shot" (over decoys), Redheads and Canvasbacks. Size 15x22.

"A Lost Opportunity," Blue Bills. Size 11x14.

"Stopping an Incomer," Mallards. Size 11x14.

Sent carefully packed, postpaid. Price for the set, \$5.00. Not sold separately. FOREST AND STREAM PUB. CO., New York.

attention of the meeting; a bill was drafted, and subsequently, through the efforts of the Association, was adopted by the Legislature. Though the engrossing purpose of the meeting was that named in the call, nevertheless, at this very first convention two trap-shooting matches were engaged in as a diversion after the weightier concerns had been given their due attention.

As one annual meeting followed another, the trap-shooting features grew apace, and engaged more and more the attention of those in attendance. In time club delegates came to be chosen not because of their interest in game and fish protection, but because of their expertness at the trap. They attended the convention not to represent the fish and game interests of the home clubs, but to maintain their prestige in shooting, and to win prizes and trophies. The prizes multiplied and grew in value. In the end trap-shooting monopolized the entire attention of the annual convention, and this came to be known as the "State Shoot."

Such a departure from original purposes was watched with extreme regret by those who appreciated the opportunities of usefulness open to the Association, and who recognized the obligations it owed to the public. There were not wanting Jeremiahs to bewail the people's following after strange gods. But protests and criticisms and exhortations were ineffectual. The real fault lay in those provisions of the constitution which called for the holding of a deliberative convention and a trap-shooting tournament at one and the same time, and the remedy was not found until the constitution itself was changed.

At length, in the winter of 1892, in a special meeting called by Gen. D. H. Bruce in Syracuse, a committee was named to devise a way to restore the Association to its original purpose. The committee made its report at the next annual meeting, in July of that year, and suggested a reorganization, with a new constitution. The essential features of the report are outlined in these paragraphs:

The plan of reorganization recognizes and makes ample provision for the two purposes of the Association—game protection and trap-shooting. In the practical conduct of the Association each one of these interests is given its own place, but the two are kept entirely separate. Provision is made for the fullest activity in each, but neither one is permitted to conflict with the other. Two meetings are provided for annually, one in the winter for game protection interests only, and one in the summer for trap-shooting and other competitions.

The summer tournament is retained in all essential details as now conducted. The management of the Association tournament is entrusted to one of the local clubs, to be named from year to year. This club is given full charge of the meeting, assumes the financial responsibility and reaps the profit or bears the loss. The present mode of selecting the place, time and club remains unchanged. The officers of the managing club are made *ex officio* the officers of the tournament and the tournament convention.

The plan was adopted and has been in operation for two years with most satisfactory and gratifying results. The annual winter conventions have been well attended and influential; the summer tournaments have lost none of their interest and importance. The reorganized Association is in every way stronger than ever before. It has solved the problem of combining in its membership all the diverse elements whose union forms a powerful whole. Each element—the protective and the tournament—has fullest scope; there is no clashing of interests; neither suffers at the expense of the other.

Now that the New York Association has found so happy a solution of the problem which formerly confronted it, and which now confronts the Illinois Association, would not Illinois do well to make trial of a like scheme of reorganization?

We commend the plan also for general adoption by State associations. Copies of the New York constitution will be furnished from this office on request.

## VIGILANT.

THE arrival of Vigilant in British waters puts an end to the long-disputed question as to whether America was called on to take other than a defensive part in international racing; and henceforth American yachtsmen need concern themselves only with Vigilant's actual performances against the British fleet. The policy of sending a representative American yacht abroad has long been condemned by many who consider themselves good sportsmen but are unwilling to assume any chances not absolutely forced upon them, and the same objections have been made to the plans of Messrs. Gould this year as in the case of Mr. Carroll and Navahoe last season.

We are much mistaken in the feelings of Americans as a nation if they endorse in any way that cold, practical spirit of mug-hunting which would keep Vigilant at

home because she might be beaten abroad, and if they do not appreciate the pluck and boldness of the yacht's new owners in purchasing the one yacht whose position as a representative American vessel is beyond question, and fitting her out in the best possible manner, and sending her forth boldly to meet anything afloat.

The venture of the Gould brothers has nothing of that flavor of so-called "practical yachting" which leads a man to avoid a race in which the chances are not wholly on his side; but it savors more of the spirit which in the early part of this century sent out from all the Atlantic ports a fleet of little schooners and brigs under letters of marque, with no thought of their small size and inferior armament, but simply with the resolve to do the best they could against any odds.

There is no doubt that Vigilant, whether repeating the triumphs of Wenonah and Wee Win, or only moderately successful under conditions for which she was never intended, will carry the American flag with credit on the Clyde, the Irish Sea and the Channel; and whatever meed of success she may finally attain, her owners are deserving of nothing but praise for their spirited and patriotic action in assuming the offensive rather than defensive position in international yachting.

## SIDE-FISHING FOR COUNT.

LAST week we reported the fishing contest of the Honeoye Falls Anglers' Association; to-day is recorded that of the Niagara County Anglers' Club. The members divide up into rival companies and each fishes to outscore the other side. Such competitions have long been popular in Great Britain. The signs appear to indicate that in time they will be quite as common here. With their development one of two results will follow; side-fishing contests will seriously impair the fishing in waters where the stock is susceptible of depletion, or else the fishing competitions will so stimulate popular interest in angling as to provide for requisite restocking and protection.

## SNAP SHOTS.

A BAND of conquistadores under the leadership of Mr. C. M. Coen, sailed from this port on Thursday of last week and took formal possession of a new country out beyond the Sandy Hook Lightship, eleven miles from the Long Island shore and seventeen miles from New Jersey. The site is known on the charts as the Cholera Banks; it is 12½ fathoms under water, and lying beyond the three mile limit is outside the jurisdiction of the United States or of any other country. The new principality was christened Atalantis. Here, the projectors say, they will build a palatial hotel, supported on pillars of iron and cement rising from the ocean floor. All sorts of international complications will arise in connection with the founding of a new principality within sight of our shores; but some folks are more interested in fishing than in extradition treaties. The Cholera Banks are famous fishing grounds, and when Mr. Coen shall have completed his \$4,000,000 hotel, Atalantis will be a Mecca for salt-water anglers.

Special Deputy Benjamin Smith, agent of the Pittsfield Rod and Gun Club, caught a trout fisherman named George Kenney, of Adams, Mass., the other day attempting to sell a lot of 500 trout all under the Massachusetts legal sales limit of six inches. The justice fined Kenney \$20 and costs, which was perhaps not excessive, when it is considered that at about the same time a Vermont man for starving his wife to death was required to pay a fine of \$1,000.

Professor Garner, who claims to have been camping out in an iron cage among African gorillas, says he knows of "nothing in the way of sounds that can inspire one with so much terror as the voice of a big gorilla near at hand in the lone and silent hours of the night." Evidently the professor has never heard the woor of a grizzly in the chaparral, or he would not consider it necessary to go to the Dark Continent to be well scared.

The *Evening Post* of this city has been discussing what may be meant by the book publishers who advertise their works as "summer reading." The ideal summer reading, "grateful and comforting" in humid June, is the story of the FOREST AND STREAM expedition amid the snows of the Yellowstone.

The portrait on the next page is given to fill a long-felt want.

For Prospectus and Advertising Rates see Page 548

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

## WILL ILLINOIS FOLLOW?

IN our report last week of the convention and tournament of the Illinois State Sportsmen's Association at Chicago, the familiar complaint was repeated that the tournament interests had crowded out those of game protection. President Low, it was said, "gave the Association the annual roast on its inefficiency as a protective body, and this the Association bore placidly, calmly and mildly as is its wont. Mr. Low thought trap-shooting should not occupy all the attention and time of the body, and that the Association ought to 'do something or disband,'"

The failure of the Illinois Association as a game protective force does not of necessity follow from an indifference on the part of its members toward that cause, but is to be found in the nature of its organization, in the form of its constitution. There unquestionably exists in the rank and file of the Association a sound and healthy sentiment, which, if given adequate opportunity of expression and activity, would prove a potent force. But any possible game protective activity is now smothered by the trap-shooting interest, and it is thus smothered because the constitution of the body makes no provision for its separate, unhampered exercise.

When the constitution of the Illinois Association was framed the authors recognized the dual purpose of the organization—game protection and trap-shooting. They provided for both, but for both at the same time; and here was their mistake. The average man cannot successfully engage in work and in play too; if he attempts it one or the other must suffer; usually it is not the play. An association of average men cannot take part in the work of game protection and in the play of trap-shooting at the same time; if they attempt it one or the other must be slighted; and trap-shooting never is. This is strictly in keeping with human nature; and sportsmen are very human. As most other State associations which attempt to combine trap-shooting and game protection, the Illinois Association has long been and now is in the condition of the New York State Association for the Protection of Fish and Game, prior to its reorganization in 1892. And as here, the remedy, we apprehend, is to be found in a modification of the constitution by which the two interests shall be accorded equal recognition and opportunity of development. In this the New York Association has shown the way. Others would do well to follow.

At the risk of rehearsing facts which may be familiar, but whose study cannot fail of instruction, we give in brief the story of what has been done in New York.

The New York Association was formed in 1859 by delegates from different counties, who had met in response to a call for "a convention for the purpose of discussing and devising means for united action throughout the State for a revision of the present senseless and inefficient game and fish laws." This business occupied the time and

No. 6.

### In the Heart of the Mountains.

LONG before the sun had dreamed of touching the top of even Mt. Washburn in the Park, let alone the rocky front of the Obsidian Cliff, which frowned down not far from our snow-bound camp, there was a general unbending and straightening out of the cramped forms in the little shack, and everyone busying himself preparing for the day's march. It was only a little after 3 o'clock in the morning when Sergt. Kellner and his party took the trail. Billy and our men were a little later, as we stopped to give the *skis* a scientific scorching and waxing. A new *ski* is like a new shoe, it needs breaking in. A scorching which leaves the surface browned or almost black seems to lay the grain of the wood. The coat of grease and wax heated in on this surface keeps the grain from being started by the snow, and gives that perfect slipperiness so much valued by the experts and so embarrassing to the greenhorn.

I left the camp ahead of our party, sometime before sun up. The trees were banked with snow, so that one could not see 20 yds. into the forest. Wherever one could get a look through at the mountains he saw only a white silence which repelled and did not greet. We were now in the heart of the mountains and the trip was on. There was a singular feeling of smallness and insignificance which came over one in such surroundings, yet I felt cheerful and happy in the fact that I was not so badly off physically as I had feared, but was refreshed fully by the night's sleep. Moreover, some advice from the boys had set me on better terms with the *skis*. The day before I had had my toe straps too tight, and had been walking with my heel on top of the heel strap. I now loosened up the thongs of the toe straps, put my heels square down into the heel straps and buckled the *ski* fast on. The bottom strap of the heel brace I cut off altogether, as it was too short for the big overshoes. Thus arranged, I found that my foot got a control over the *ski* it had not had before, and I was free of much muscular strain, while the foot worked with far greater ease in the straps.

### Billy's Turn.

I plodded along alone in the trail of the Kellner party for a while, but not fast enough to keep ahead of Larsen and Holte, who raced on, anxious to get over the nine miles which we had set for the limit of the day's journey. Billy was last to come on, and by the time we joined forces we were some distance on the way. We then went ahead in company for a few miles. Billy was dull and loggy, and at about 9 o'clock he said he was feeling weak and faint. By that time we had run the "Brick Kiln Hill" and were over on the hot country near the "Devil's Frying-Pan," a couple of miles or so from Norris Basin. Here our shoes had begun to stick again, and we concluded to stop and wax up and make some tea for Billy, who was distressed a good deal, much as I had been the day before, only not so badly. I guyed him a little bit about its being his turn to give out, but after he had drunk about a pint of tea with a little brandy in it, he recovered from his faintness and was soon sassy as ever. We had trouble in getting any good wood here, as the axe was on ahead and the snow covered everything deeply, but Billy with his usual deftness managed to get a fire. We started the snow to melting in our teapot by sinking the latter in one of the little boiling springs near by. As it melted we put in more snow, a little at a time. On all the trip we had to melt snow to make tea or coffee, and we learned that if you crowd snow into your cup so high that it sticks up over the top, the water will taste smoky. The best way is to get a little water first in the cup and then add snow gradually.

### Winter Scenes.

There was a little open lake to the right of the trail here, and a lot of steaming, red hot little geyserettes which had no business to be out there in the snow. A broad strip of bare ground crossed the trail every once in a while, where the underground heat kept the surface too warm for the snow to lie. The melting of the heavy snow often created quite beautiful effects. Moreover, we found an energetic little "paint pot" or so along the trail, where boiling clays kept up an eternal complaint, and the big "Devil's Frying-Pan," with its endless sputtering and sizzling of gaseous hot water, served to make pause for a moment eyes already beginning to get used to the wonders of this unnaturally wonderful country.

### At the Soldiers' Station.

Private Lockhart, from the soldiers' station at Norris Basin, joined Billy and me as we were finishing our wayside rest, and we went up to the station together, arriving at the soldiers' shack all in good shape. Here I put my feet into a bucket of ice water, much to the horror of Larsen, who thought that was inviting a cold. Yet I found that a short trot barefoot in the snow did not have that effect. We all ate like fiends, and created apprehension in Lockhart's mind, as his rations were running low. He had side meat, flour and canned tomatoes, and we thought that was good enough for anybody. The Norris Hotel was never rebuilt after burning down, and the only accommodation at the Norris Geyser Basin is a lunch house, which is closed in winter. The soldiers' quarters are not public, but we were taken in and given share and share alike. Lockhart was at that time alone. Two men are stationed here all winter, and there are also two

horses, two cats and one dog. The horses have a barn, and rarely get more than a few yards away from it, except close along the banks of the Gibbon River, which rushes by near the shack. Between the barn and the house the snow was 6 or 8 ft. deep, with drifts of twice that depth. The horses had trodden down a sort of yard, and seemed to be wintering well and to be full of spirit. The thermometer was 45° below here once this winter, but it was above zero when we were there, and in this spring-like air we all took off our heavy wear and unbuttoned our shirt fronts.

### The Winter Patrol.

It was about the middle of the afternoon of our stop here that Burgess brought in his prisoner, Howell, as I have earlier described. Later on Capt. Scott and Lieut. Forsyth came in, and at 7 o'clock in the evening "Snowshoe Pete," the telephone lineman, who had been over the line in the upper Park, also came in, so that we had a houseful again. All reported soft snow and plenty of it, and very hard shoeing. The two officers were tired enough with their journey of twelve miles from the Cañon that day. Capt. Scott had a bad heel. Billy's heel was also badly blistered, and I had a bad place on my own heel. Here was where I threw away my shoes and took to the moccasins, which I never regretted. Billy stuck it out and got part of his original heel back to the Post at the end of the trip. Poor Burgess, with his frozen toe,

continued falling of snow adding always to the great depth already fallen, and lying light and fluffy on top the settled body of snow. As we learned later, it took Burgess till dark to do the twenty miles in. "Snowshoe Pete," who is a very excellent shoer has really made this twenty miles in three hours and thirty-five minutes. Larsen has made it in four hours and twenty minutes. Sergt. Morrison has gone from the Fountain Hotel to the Mammoth Hot Springs, forty full miles, in half a night, and a day. It all depends on the shoeing. To the inexperienced all snow would seem alike, but the expert *ski* runner knows that it is never the same two days in succession. If the weather is very slippery and not freezing, the shoes will slide and not stick. If the thermometer then drops to the point of freezing they will begin to "ball up" and stick horribly in the moist snow. In the morning when the snow is cold and dry the shoes slip nicely, but by 9 or 10 o'clock, when the sun begins to strike the snow, they will begin to clog up before the snow shows any sign of melting. In fresh-fallen snow the shoes do not stick, but sink down deep and make awful going. On the other hand, a very cold, dry, floury snow will stop the shoes like so much ashes. One of the most dangerous things to meet in running a hill is a strip of this fine, dry, drifted flour snow. One can not see it until into it, and it stops the shoes at once, and will give the best *ski* runner a tumble. Still another sort of snow is a crusted snow, and this may again be a stiff

crust or a crust which now and then breaks down. The *ski*-goer realizes at once when he has struck a good day, though often he can not tell why the snow is so obliging, and on such a day he travels long and far as he can, resting when the going is bad. Sometimes he travels at night, as we did some of the time later on in our trip. When he hits a deep, light, soft and yet moist snow, with more of it coming, as we found it at Norris Basin that next morning, he looks wise, shakes his head and holes up for the day. We holed up, concluding to exercise only enough to take the soreness out of the muscles. This we did by a trip through the geyser basin, a mile or so distant from the shack.

### Geyserland in Winter.

We first went over the east part of the basin, where the wide valley lies out, bare of snow and covered with steam. The rim of this valley as seen by the summer tourist is one of hills covered with dark pines. As we saw it, it was all white with heavy snow. In many places, as at the outlet of the Great Growler Geyser, the masses of snow assumed the most grotesque forms. Often we walked in among great clumps of snow, high as one's head, with our feet on the bare hot ground. Under each clump, hid deep from sight, was one of the boulders among which the summer tourist picks his way with ease.

The geysers were very accommodating to us, and kept up a great series of spectacular eruptions. The Constant, the Hurricane, and lots of big ones in this part of the basin kept in view nicely, and every way we looked there was a little hell of steam and boiling water on tap. At the edge of one of the smaller geysers we stood close enough to feel the thin rock heave and sink rhythmically beneath our feet. It was a strange, unreal scene about us, and one the world can hardly parallel. No wonder that we put a camera into active requisition.

The Growler Geyser, which lies at the top of a knoll above this east valley, at the side of the trail, is a rare and beautiful sight in winter. As we saw it, its crater was deep in a well of crystal-like snow and ice, out of which came a cloud of fleecy white steam. As the wind changed, it often whipped this obscure cloud away, and gave us a glimpse below our risky footing on the edge of the ice wall. The hot steam melts the snow it strikes. The wind changes, and the melted snow freezes while the steam is busy elsewhere, so all up and down for apparently 30 ft. or more, we saw a ridged and wrinkled caisson of many-tinted ice. If you will stick a stick down into the snow and pull it out, you will on looking down into the hole see that the snow seems of a deep blue color. This icy case of the Growler has all that wonderful deep blue tint, but a hundred grades of it, dazzling, bewildering, evading. When we can photograph in colors and reproduce the colors, one may see this picture of a winter wonder, but until then one must take the winter trip to gain a notion of it even the most meager.

We left the Growler finally, passed the many mud pots and miniature hell spouts, till we reached the fathomlessly beautiful Emerald pool. Thence we descended a steep trail the hot water had made through the snow, and examined the mighty Monarch Geyser, which was fretting and fuming, but not making much of it. The Minute Man, and a lot more mud pots and pools of course came next, and the wrongly named "Blood Geyser," which Hayden called the Echina. In some of the little nooks of the hills back of the geysers we got wonderful effects from the snow masses, melted into all sorts of shapes by the heat of the geysers, and of these I got two beautiful photographs, which I prize very much.

The New Crater gave us an interesting exhibition of spurting hot spray, and we spent some time here. There had been an eruption of this geyser apparently about a month ago. It seems to have a habit of slamming out rocks and things to a distance of 80 to 250 ft. At the edge of the hot ground around the main vent of this angry funnel there was a clean-cut drift of snow, in which it was easy to read the record of the geyser. Deep down under the surface was the layer of old snow, and above this came a stratum of mud, rocks, etc., which the Crater had spit out. Then snow had again fallen several feet in depth, and over all, not so very far beneath the top of the snow, had fallen a many-colored deposit of liquified clay, rock, and what not, which had apparently

E. HOUGH OF "CHICAGO AND THE WEST."

was the worst off of the party. Pete, who had come in from the Fountain, had had nothing to eat but one sandwich for the past twenty-four hours. I did not hear anybody complain, and such little aches and pains seemed to be regarded very much as a matter of course, and as a necessary part of the business. My admiration for the U. S. Army and the Park patrol rose still higher. There are men out there who don't need any pomp, pride and circumstance, but who can put on a Mackinaw shirt and "plug" their twenty miles a day on the shoes when they want to. The American public doesn't know the first thing about the U. S. Army, and I imagine that most of the Army doesn't know anything about Ft. Yellowstone and its pleasant little winter service, trying to do what can't be done. I couldn't help thinking of the weary miles of tramping that had been done for this dirty, greasy specimen of humanity, Howell, who seemed so chirky and sure of his early release at the Post. Down the trail, somewhere, were Kellner and his party, making their twenty-one miles that day to get the plunder this fellow had left behind him. Still another party was to follow to bring the stuff out. Here were the two officers and Burgess. The whole Park was full of men for the first time in its winter history, all on account of this fellow, who had been doing something which ought to bring him ten years in prison, but which would really net him only a few days in the guard house. Yet there was not a complaint, not a harsh word to the prisoner, only a quiet, dignified acceptance of duty as it came.

### Ski Lore and Snow Quality.

The next morning Burgess left for the Post with Howell, accompanied by Pete. Capt. Scott and Lieut. Forsyth concluded to make two days of it, and camped that night at the Crystal Spring shack, where we had passed our first night out. The shoeing continued bad,

been thrown over a strip of country 200yds. across. This geyser is a corker when it gets down to business, and when it is having a busy day I would just as soon be somewhere else. It is liable to drop a chunk of rock about the size of a piano on a fellow, anywhere from 25 to 50yds., and disfigure him.

On top of a hill to your right as you return to the Gibbon River from the basin, is the Congress Geyser, so called because its new crater was formed at the time, three years ago, when a congress of geologists was visiting the Park. This open pool is without bottom apparently, and is of a gracious opaline hue, with indescribable blending tints of yellow, blue and pearl.

In the distance, on Schurz Mountain, we could see the gleam of the Monument Geyser basin, some miles distant, but we did not go over there, for we had more wonders than we could handle right at hand. I cannot, of course, attempt any actual description of this weird region, additionally wonderful and startling as it is under the disguising robe of winter, for the main purpose of these articles is different. I can only say that even those to whom the geysers are an old story in summer became enthusiastic over them in this winter aspect, and even Billy was eager to go over the entire basin again. To Billy, of course, much of our pleasure was due here, for he knows every geyser thoroughly, and is a most interesting and thorough and enthusiastic guide. If I had a friend wishing to make the Park trip, I should by all means advise him to get Billy to go along, for he knows the Park inch by inch, and even its scientific features and scientific history are not strange in the least to him, since he has been so much associated there with parties of scientists of all sorts. Billy could talk of rhyolite and alga and silicates in a way to make your head swim.

In walking over the geyser country we left our skis, and picked our way along the hot water streams which traversed the country so generally. Once in a while we had to plunge through snow waist deep to get from one geyser to another. Our feet were soaking wet in spite of our overshoes when we again mounted our skis and took the tidy run down hill to the soldiers' quarters by the Gibbon. We had done enough work among the geysers to earn a good night's sleep.

#### Off for the Canyon.

Those who visited the Hunter's Cabin at the World's Fair probably saw Billy Hofer curled up on the settee, reading a novel describing the trials of the Lady Evalina, or something of the sort, and thought he was plenty lazy. That is correct. All mountain men are lazy when at home. It is the delving lowlander who gets out before breakfast to plow corn. But on the trail I found Billy an energetic and tireless commander-in-chief, always alert, but alert for all and not for himself alone. About 3 o'clock in the morning of the following day, about the time I was just fixed all right in among my blankets, Billy crawled out and began waxing up his skis for an early start. Our breakfast of bread, coffee and bacon was soon over, and we each made a sandwich for his lunch. We were to do the twelve miles to the Cañon that day, and needed to make an early start, for the shoeing was found to be bad. The light was barely gray when Billy and I pulled out, Larsen and Holte not starting for half an hour or so later. I broke trail for a mile or so and found it hard work, the shoes sinking down into the soft, light snow nearly a foot at each step. Then Billy and I alternated for a time at breaking, until at length Larsen and Holte came up and went ahead for the rest of the day.

#### A Lunch in the Snow.

Even Larsen and Holte found it bruising work, and at 11 o'clock in the morning, after hours of choppy hill work, where we could only average about two miles an hour, they turned out of the trail and asked for coffee. Billy did not like to stop, but we out-voted him, and so made a wayside camp. The snow was so deep on all the level that we could not find bottom with the snowshoe pole, but we got along all right with the fire. The little camp axe soon had a dead pine tree in lengths, and these we corded crosswise on the trodden snow, making a platform on which we built our fire. Around this, with our feet down in the hole, we sat on the edge of the snow pit, with logs and boughs to keep us from sinking. Our packs we threw off and left standing on our skis. Noticing how picturesque our little camp appeared, Billy backed out and made a shot at us with his big camera, though the light was dim and the shadows very heavy. In that section the pine timber was very dense, nearly all of straight, slim trunks about 8in. in diameter. Over it all the snow hung in great flakes and rolls, like strips of cotton batting. One could not see into the woods for any distance. The silence was simply oppressive. There was no sign of life except the track of an occasional pine squirrel or of the big-footed "snowshoe rabbit." Everywhere was whiteness and silence, the gravity and dignity of nature, in which a jest seemed almost out of place.

#### Bad Hills.

We had some hard hills to climb on this day's march, the first of these being the Cascade Hill, that winding, reckless eminence down which the Gibbon River leaps and plunges so beautifully summer or winter. At this hill we had the hardest sort of corduroying and a slide backward would have been dangerous. The snow was much higher than the rail on the roadside and from there it filled the entire cut with a great drift which slanted far up the mountain side to the left. We had to climb, and climb along a risky sidehill of snow, too, and the best of the shoers could not help distress at such labor. I waited till the others had gone on and took my time on this hill. Time and again I slipped and fell, and every time I went down I took more than ten seconds before I came up again. I learned that the only way to do was to lie still and rest when one got a tumble, and not to wallow and work too hard, or try to do it all at once. It

may have been half an hour or three-quarters before I got to the top of this hill, and I was mighty glad when I got to where I could see over.

"Is this the worst hill we've got to-day?" I asked Billy with what little breath I had left.

"Well," said he dubiously, "the Blandon hill is longer. It's about a mile climb up the Blandon."

Of course this made me feel real good, but when we actually came to the Blandon hill I found I was worse scared than hurt. Larsen and Holte walked right up it, on end, only corduroying in a few of the steepest pitches. Billy told me to put on clogs here, so I tied a good knot of gunnysacking under each shoe and went ahead. To my delight I found I could go right up the hill, and raising my toe high and slapping the skis down hard I made great time and caught the two privates resting at the top. They complimented me on my increased skill and pulled on out as soon as Billy came in sight. Billy was having a hard time with his heavy camera and complained of a coal of fire between his shoulders. We took off the head-strap of my Lake Superior pack bag and arranged it so he could ease his shoulders by passing the strap across his forehead. Which reminds me, now that I think of it, that Billy has got that head-strap yet, and I wish he would send it back, as it is part of the combination of my pack bag and worth more than all of his old camera, as I will

enough, as it proved, for it took but a few moments to see that they had had no idea what they were going into. Their trail led across a series of ravines and steep, choppy side hills, covered with dense timber. We could see where they had fallen time after time, and where they had taken some risky slides. It was finely reckless *ski* running of them to turn loose through such a country, but it was poor judgment, and we found it poor judgment to follow them. It was an awful bit of travel, and we had a rough time of it, hanging on to the side of the mountain and trying to keep from toppling over, or from smashing into the trees on some of the sharp little runs.

It was here that I met with what might have been a very serious accident, possibly one that would end the trip at once unfortunately. I was trying to get around a jutting bit of rock on the mountain side, when my pack struck a tree and I got a fall, sitting down hard and swift on the snow. My *ski*, purposely left a little loose to avoid injury to the ankle in such rough work, slipped off my foot, but I shoved my *ski* pole through the strap as it started to glide away, and stopped it.

"Look out there!" cried Billy; "for heaven's sake don't let your shoe get away from you here!"

It was too late, for even as he spoke the pole slipped as I reached out for the shoe, and the evil thing started by itself down the mountain side.

At first the *ski* slid smoothly and gently, front end first, by some miracle avoiding the trees as if it were alive. Then it got on speed, and began to leap and jump and glance down the steep slope, leaving a fine white skit of snow behind it as it flew. At last it took a final leap, and disappeared from sight over the bluffs which we knew lined the creek at the bottom of the great ravine below us.

I was in dismay, for to be left helpless in that way 30 miles from a settlement, in snow so deep and soft as that, is by no means a laughing matter. Men have, perhaps, perished from such accidents, when having no axe to mend a broken shoe. I have heard of a man who bound pine bark on his hands and knees, and so crawled half a mile to his own home. I have heard also of a man who made a pair of *skis* out of barrel staves, and of yet another who cut off the splintered end of a *ski*, and so traveled on a *ski* and a half—not so difficult as it sounds. But to travel 30 miles, or one mile, on one *ski*, in such a country as this, was something impossible, and I grew suddenly contemplative as I realized this. I didn't want to sit there without anything to eat till spring time, and as no one would be apt to be along before then, the flowers that bloom in the spring would have had, in my opinion, entirely too much to do with the case, tra la, because they would be growing over a discarded and forgotten journal long before any relief expedition could have found him. Tra la, again.

"Did she smash into any tree?" sung out Billy.

"No, I think not," said I.

"Well, sit down on your other shoe and slide down after it," said Billy.

I was just warm enough under the collar to slide down anything about there, so I obeyed directions and slid, hanging on to the straps of the remaining shoe. The grade was awfully steep, but the snow that rolled up between my legs broke the *facilis descensus*, and I found I could manage it and also could keep in sight of the trail left by the flying recreant ahead. At last, with a final plunge and slide, I found myself clear at the bottom, by the side of the creek. Clear across the creek was a great white drift of snow, and in the side of this I saw a narrow slit of broken snow. The *ski* had jumped 50ft., clear across the creek, and in that drift, after some digging, I found it, saved from splintering by the cushion of snow, and saved by the FOREST AND STREAM luck from absolute ruin on any one of a thousand trees, past which it had glided on its bullet-like flight.

#### In a Hole.

Billy, plucky and faithful always in time of trouble, started on down the mountain side after me, and after a while succeeded in getting way down to the creek, over an awfully rough little gully. And there we were, down in a well of snow, on each side of us slopes so steep that it seemed a goat couldn't go up them.

"Never you mind," said Billy, "I'll soon show you I know right where we are. We're three-quarters higher up the creek than the bridge at the falls, so we've saved just that much climb if we can once get up out of this cañon, and I think we can."

#### Out of the Hole.

We did get out, after an hour of the toughest work we had on the trip. The further side of the creek was bare of trees after we got up a bit, but it was very steep. We had to zig-zag up, rail fence fashion. Of course this meant a turn at an acute angle every once in a while, and at every turn some one would get a fall and a slide. But finally we struck a draw which offered easier going, and soon saw the great roof of the Cañon Hotel crowning the ultimate hill. It was far after 2 o'clock when we got in. Larsen and Holte had had a rough time on their trail and were just in. Soon we were all about the big stove in the kitchen, all talking with our mouths full, and all very happy.

#### The Park as a Winter Resort.

There are three hotels of the magnificent chain of hostleries established by the Yellowstone Park Association which have keepers left in them by the Association all through the winter. None of the hotels is open to the public after the close of the season. It was a great courtesy, then, of Manager Deane, the acting and efficient head of the Association in the Park, to give us permission to stop at the Park hotels when we found that convenient. At the Lake Hotel Mr. Fletcher and his wife spent the winter. At the Fountain Hotel John Schmidt has been winter caretaker for some time. At the Cañon Hotel is John Folsom, the best snowshoer in the Park, and by reason of his horribly lonesome life, absolutely alone for more than half the year, grown to be one of the

E. HOUGH.

Of the FOREST AND STREAM's Yellowstone Park Expedition.

later show. Billy and I rested a moment at the hot country, eight miles from Norris, but we did not drink at the stream where we saw the others had stopped to drink. Billy warned me again that to take a drink of cold water was the most weakening thing I could do on the trail. He said also that men who drank liquor on the trail always paid for it with an early exhaustion. We did not touch our brandy supply that day, nor for many days afterward, and neither of us suffered from exhaustion to any extent. I had lightened my pack by leaving some under-clothing and other articles at Norris Basin and was now rapidly hardening up and getting into the work, so that I got along all right.

"We haven't very far to go now," said Billy as we paused at the top of a long and winding hill. "At the bottom of this hill is Cascade Creek, and beyond that we have to climb the Cañon hill, about a mile, then we're there. You go on ahead down this hill, and I'll come after you, so that if anything happens to you I won't have to come back up the hill. It's pretty steep."

Of course, this made me feel real cheerful, but there was only one thing to do. My spine sort of crept a little, but I turned loose, and away we went on a lovely, swimming, sliding, sailing flight down the winding mountain trail, which was indescribably exhilarating, and like most dreaded things, not so bad after all when you go ahead into them. I disappointed Billy by not even getting a fall, though this hill is not really a bad one.

#### The Flowers that Bloom in the Spring.

Billy noticed that the boys ahead of us had not followed the usual trail down to the bridge, but had taken a short cut through the woods. We followed their trail foolishly

most taciturn men on the earth, just as he is one of the kindest-hearted and most obliging. In all the time I was with Folsom I never knew him to speak a word unless addressed. He has books, a cat, a flute and a little organette to help him break the awful monotony of the winter life alone in such a region—a calling most unique and trying among the singular ones followed by the sons of men. His chief duty is to keep the roofs free from snow and to exercise a general care over the buildings. The winter keeper is generally a carpenter as well. He must also be his own cook, laundryman and chambermaid. At all these turns of work John Folsom proved adept. Thanks to Mr. Deane, we got a home in the kitchen, a good bed to sleep in and supplies for continuing our trip. The value of all this can readily be appreciated. We thus avoided the carrying in of heavy supplies of food and lightened the hardships of the trip most materially.

#### The Plot Thickens.

We were now thirty-two miles into the Park, all well and hearty, and so reported to Capt. Anderson by telephone, as quick as the wire began to work, receiving hearty good wishes in return. We felt contented and comfortable, knowing that we were now within a day's march of the buffalo and elk, and with the most interesting and exciting portion of our trip ahead of us. It will be in due order now to tell about our camps on the Hayden Valley, and about our experience there with the great game of the Park.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

## Camp-Fire Flickerings.

"That reminds me."

### A BULL STORY TOLD IN CONFIDENCE.

THE letters of "Old Sam" have brought to mind many pleasant recollections of "Robin's Nest Camp"—the most delightful camp among hundreds in my recollection, and I have to thank my friends for their kindly words of "Kelpie" in FOREST AND STREAM.

It occurs to me that so much has been published about that Carp Lake bull, that I perhaps ought to break the long silence which I have hitherto preserved with respect to that ferocious creature; for if this thing keeps on, the eerie tales anent the "Water Bull" of the Highland locks will be as naught to those told around waning camp-fires about the Carp Lake monster. The Colonel will forget to punch the said fire with his wooden poker (on which is marked the exact length of the trout that Jeems Mackerel didn't catch), and the M. & N. E. R. R. will sell no tickets to the Carp Lake stations. Prudent fathers will compel their sons to hoe potatoes or drop pumpkin seeds when they seek to go fishing, and the mother will hush her crying babe with the whispered tale of dread.

Yes, there was a bull, I mind it well. We saw him, Johnny No. 2 and myself, when we went across the lake to fish the brook where "Kingfisher" and "Old Sam" were so ignominiously routed. Only the creature was not at that time in the pasture, so that we fished the brook in peace until we reached the road where it ran across into the next field. There were bushes along the upper fence, and a pool between that and the bridge. I thought to fish this pool.

Having crossed the fence into the road at some distance from the bridge, and not far from a farm house by the roadside, we—No. 2 and myself—advanced toward the pool, when we were aware of a large and well constructed bull, near some young cattle and not far from the house. I do not now recollect whether or not he heralded his approach with the regulation *boo-oo-oo*, but he came slowly down our way, evidently bent on business of some sort. No. 2 was a city boy, and had less experience than I in such cases, so he jumped over the fence. I did not think the animal likely to trouble us, but I wanted him to keep away from the brook. So I advanced toward him, waving my rod, and addressing him in an elevated tone of voice. He stopped, and I again moved toward the brook. Soon he once more came forward before I had time to cast a line. I looked around for a stick or stone, but none were to be had. I again waved the rod, adding to the action-my expressed opinion that he ought to go away. Then I reflected that it was just possible that he might mean us harm, and I thought of the lines in the "Bull Fight of Gazul."

"His eyes are jet, and they are set in crystal rings of snow,  
But now they stare with one red glare of brass upon the foe."

I examined critically the characteristics of the ocular outfit of this brute, but nothing answering to the above specifications could be discovered. There wasn't a sign of brass, red or yellow, about his eyes; but then, American bulls might have different ideas about these things from the Spanish. I tried him once more, and he wouldn't budge. Remembering that I was not as active as in the old days, I gave up the pool, thinking it best to take no chances; and began fishing below the fence. Then, with a stately stride, that fierce and ferocious beast—that new edition of Harpado of Xarama—moved onward to the pool and—took a drink. That was what he wanted. Then he retraced his steps for about 52 yds., while we, breathless, watched to see what dire calamity should befall such rash adventurer as might dare to cross his path. And it was a girl about twelve years old, red-haired and barefooted, with a dried stalk of the "American velvet plant" (commonly called mullein) in her hand. She skipped nimbly forward, rounded up that bull, and drove him into the barnyard before I had time to cross the fence again and drop a line in the coveted pool.

When we were seated near the camp-fire in the evening, I heard No. 2 express some surprise at the daring I had shown on this trying occasion, but I believe that this is the only time that I have ever alluded to the matter; and it must be understood that the above simple, unvarnished tale is to be considered as strictly confidential.

Not all the bulls that have set up their projects in opposition to mine have come off conquerors. A good many years ago I found myself, after an arduous campaign in the Southwest (in which I nearly perished), in very indifferent health. As a consequence, finding that I should probably die if I remained in civilization, I took up a homestead on the Oconto River, in northern Wisconsin, cleared a patch of land, built a house, and lived there some years. This move probably saved my life.

I had planted a small garden near the house, and it had begun to show good promise of rewarding my efforts, when one fine morning before breakfast, we heard a boo-hooing, and on looking out, there was a large and lively bull "pawing dirt and hooking gravel," right among my garden-sass. I was surprised, for except one man whose clearing joined my own, there was no one living within some two miles on my side of the river, nor for three-quarters or so on the other side. Where the brute should have come from, I could in no wise determine.

I caught up a handspike and went at him. We argued the point for a few moments, when he broke for the river, which ran some 40 yds. from my house. This stream (the Oconto), was perhaps from 30 to 35 yds. in width, and near the shore on my side quite shallow; so that the bull walked out to what he thought a safe distance in the shoal water, and stood there, fighting flies.

I followed as far as the shore and shouted at him, with no result. Then as they say in Texas, I "rocked" him. Then I "chucked" him, but without avail.

He didn't like the look of the deep water toward the further shore, and he meant to return and complete his analysis of my food products.

Then I issued an order, which brought me in double-quick time a shotgun and ammunition. This gun I charged with a dose of No. 6, and just as that infernal bull was subsiding apparently into a quiet nap, I sighted for his starboard quarter, and cut loose.

There was an agonized roar, a splash and a convulsive spring that sent the pestiferous animal some 15 ft. out into the swirling rapid, and drove the spray against the branches of the fir trees on the opposite shore. Not upon the order of his going did he stand, but he got across somehow, scrambled up the bank and disappeared in a cluster of tamaracks, and I went into breakfast.

KELPIE.

## Natural History.

### QUAIL AND LOCUSTS.

THE OZARKS, Mo.—I have been accustomed to the notes of the quail from boyhood, and Bob White has a peculiar charm for me, disassociated from any idea of autumnal sport afield, but nowhere in all my travels have I sojourned in a land where the musical whistle of *Oryzopsis virginianus* was so common as in this locality. It is exceedingly pleasant to awake on a cool dewy morning when the light of a new day begins imperceptibly to make inroads upon the darkness of the waning night and to hear from here, there, everywhere, in the woods, from the fence top, the field, the copse, the hedge row, those beautiful notes, *Bob White, Bob White*, each vying with the other in the liquid clearness of the call, seemingly glad to the bubbling over in the enjoyment of the new day and of life. This is a heavily wooded country, and quail seem to be at home as much in the trees as on the ground, at least more so than in any other place I have been. Quail everywhere will alight in trees sometimes when alarmed, but here I see them almost daily and hear them calling from trees, and by the way I have thought it possible that it was the female only that made that other call different from *Bob White* which only the male makes. Is it so? Who can tell? I was reminded of this by seeing a female alight in a tree the other day and make this peculiar whistle; meanwhile she lolled as a hen will on a hot day. I frequently heard members of a bevy when scattered make that call, but never, to my recollection, saw whether it was male or female or both that made it. This has been a favorable season for nesting and there should be a "slew" of birds this fall.

This is the year of the "seventeen-year locusts" here, and they are having their innings with a vengeance. They are like the "leaves in Vallambrosa" or the hair on a dog's back for number, millions, yea, verily, quadrillions of millions of them, and they are playing havoc with the fruit trees, the young trees especially. What an engine of destruction the ovipositor of the female is, to be sure. I have seen them over a quarter of an inch in length, as hard and sharp as a needle, and thousands of limbs a quarter of an inch or more in diameter of last year's wood, pierced from either side and hanging downward withering, bear abundant and lamentable evidence of the muscular power with which these lances are driven through bark and wood that reproduction may be carried on.

I came upon a fact some days since—new to me—which is that it is the male only that has the corrugated music boxes that deafen with their strident din. The female is quiet, but she gets in her work all the same. Underneath the shoulder of the wing of the male, on each side of the thorax, is the convex, white, corrugated abomination that makes the ear-splitting noise, made, I suppose, as in the case of all the cicadas, by the rubbing of these corrugations or plates against each other. I haven't found out yet what purpose this noise fulfills, and as time is passing and I don't expect to be here when this crop of eggs hatches out seventeen years hence, I shall have to hurry up with my investigations now. When I ascertain I will acquaint you.

O. O. S.

### AT A DOLLAR APIECE.

THE spring is not the time to hunt most animals, yet it is the only time to successfully hunt this class. Perhaps you don't know what they can be. I will describe them a little; of a yellowish, mottled color and long lithe body; they do not stand high at the shoulders; their ears are very short; they are very gamy and fight hard on the defensive; they have from one to fifteen rattles on their tail. Last year a bounty of \$1 a tail was declared for the extermination of the rattlesnakes in the town. The main den is in Derby Holler, a decided "holler" on the lake front in the Split Rock Mountains, Lake Champlain. At the lower part of this basin, fronting the water for about 100 rods x 30, the surface is completely covered with broken, jagged rock, fallen from the escarpment above. There is no earth or vegetation of any kind anywhere to be seen inside the den. In the holes and crevices under all this debris are concealed for half the year hundreds of rattlesnakes. The first Sunday in May without fail, so said, the rattlers wake up and begin their tedious journey to the woods and mountain pastures in search of their food—frogs, birds' eggs, young of chipmunks, red squirrels, etc. As cold weather warns them of the winter to come they gradually work back to the den. Up to the

time that I went hunting for them over 100 had been killed. The rocks were strewn with their dead and putrifying bodies. Most of them had either been killed or made good their escape when we appeared upon the scene. I killed only one, it having seven rattles. Mather killed two babies, each having only a "button." Grey killed one that had been deprived of his coveted end by some former adventurer. We afterward learned who had cut his tail off while he was escaping in the rocks.

On close inquiry I cannot learn of a single case of snake bite to man or beast from the inhabitants of this den. I examined their fangs. They look just like a cat's claw, white and curved, on the upper jaw. My snake was as hollow as a rubber hose from his long fast.

Query—Do they breed in the den or after leaving it?

ESSEX COUNTY, New York.

HEATHCOTE.

### SERPENT SUICIDE.

Editor Forest and Stream:

I am glad to see in your issue of the 9th inst. the article on the suicide of a rattlesnake, and especially the rapid mortality of its own bite.

I can confirm Capt. Kingman by an observation of my own. Some years ago my brother and myself were riding together on horseback, and I saw a large copperhead lying in the road in such a position that my brother was about to ride over it. I called to him that his horse would be bitten and he reined to one side, stooping over in the saddle and striking the snake just in front of the back with the tip of a slender riding switch. The snake immediately struck at the place where he felt the sting of the switch and deeply implanted his fangs in his own back, and as he snatched his head back we saw a drop of blood ooze out from each puncture of the fangs. The creature fell into violent contortions, and in less than two minutes was lying belly upward, motionless and dead. About an hour later we repassed the place and the reptile was lying dead where we left him. The proposition could not be maintained that the slight blow with the keen small tip of a birch switch had killed a large and powerful reptile. It certainly received no other injury except its own bite, which I believe beyond all dispute killed it, notwithstanding certain scientific experiments seem to show that the snake's venom is innocuous to itself and other snakes.

I have, moreover, the facts of another case from my brother-in-law, Dr. Rush Chancellor, his wife and another of my sisters, who witnessed it. The doctor was driving the ladies to church, and the wheel of the carriage nearly passed over but did not touch a large copperhead, which he gave a smart tap with his whip, when it struck its fangs into its own body at the spot touched by the whip. After very brief, violent contortions and writhings, as if in intense pain, it rolled over dead, and was lying dead in the spot they left it on their return from church.

The accuracy of my observation having been questioned by scientific experimenters, I am glad to see the record of Capt. Kingman's case, and take this opportunity to record my own observation and that of Dr. Chancellor. I have not the least doubt that many other persons must have witnessed the same thing. This seems to throw doubt on the value of experiments with captive snakes whose venom was doubtless exhausted before the negative results were obtained. I have no doubt we shall hear from the gentlemen on that side of the question, but I doubt if they can dispose of the cases of Capt. Kingman, Dr. Chancellor and myself by any negative results so far recorded.

CUMBERSTONE, Md.

### BLACK AND GRAY WOODCHUCKS.

MR. JOHN W. RUSH, of this place, and myself have found something new in woodchucks. Mr. Rush is an expert forester and something of a naturalist. He wrote you a few observations on these rodents, which you printed in last week's issue of FOREST AND STREAM. These referred chiefly to their tree climbing habits and to their color, which differs from that of the common field woodchuck. We do not claim the discovery of a new species, for we detect no structural difference between the black and the gray animals; but we are ready to assume that their variation is analogous to that of the wood bison and the plains bison, so that they may very properly be designated as the forest woodchuck and the field woodchuck, the former confining itself to the woods and feeding on browse, berries and nuts, while the latter seldom ventures beyond the brink of the grass and clover fields. We assume, too, that the forest woodchuck does not burrow like its congener, but lives like squirrels in hollow stumps and trunks of trees, climbing to the topmost fronds for food, when not otherwise provided, and making winter stores in magazines.

CHARLES HALLOCK.

HAINE'S FALLS, N. Y.

FIVE LAKES, Wis.—One of your correspondents says he never knew a gray woodchuck to climb trees. This is the only kind we have here, and it is a common occurrence for them to tree when cut off from their burrows. While out walking to day my little beagle Been treed one; it ran up a smooth willow about 4 in. in diameter to a height of 20 ft. They are very plenty here, and a great pest to the farmers, as they are sure to choose a nice level road for their burrows.

W. E. W.

### Game Birds, Fires and Floods.

EAGLE ROCK, Pa., June 11.—The birds have had a hard chance here this spring. Forest fires during the nesting time must have destroyed hundreds of nests, and those that escaped the fire met with floods and cold wet weather at the time the broods were hatching. Still I have heard of two large broods of pheasants (ruffed grouse) within the last week. Woodcock seem to have hatched well. On May 13 I saw two broods which were half grown. The earliest I have ever seen.

I have a friend who bought a pup from me; I told him it was a good dog, but he wouldn't take my word for it. You know what Mr. Hough's standard is for a good bird dog. Well, what did Sam do but run a loaded wagon over his pup.

DR. COOK'S ARCTIC EXPEDITION. A few sportsmen can join it. To "Greenland's icy mountains." To within 800 miles of the North Pole. Hunting polar bear, seal, walrus and reindeer.—Adv.

Game Bag and Gun.

MY FIRST TURKEY AND MY LAST.

WHILE reading L. J. M.'s first turkey hunt in *FOREST AND STREAM* of June 2, I was reminded of my first turkey hunt when a boy on the farm living with my uncle Lolin Hickok in Trumbull county, Ohio. We were busy preparing the ground for wheat during the month of September, when my uncle called to me to see the flock of wild turkeys which were flying from a distant woods and lighting in a neighbor's cornfield. I had not had the handling of a gun of any description very much at that time, but I had been allowed the privilege of borrowing a Springfield rifle of one neighbor and a pair of brass bullet moulds of another; I could cast in these moulds a round ball that fitted the rifle very nicely. I had practiced shooting some at a mark at a distance of four rods, and could hit a 4in. bullseye quite often. Of course, this rifle was the first thing I thought of after seeing the turkeys. I hastened with all speed for my outfit, and in company with a neighbor's boy, P. J. M., who was some four years younger than myself, started off with boyish expectations of getting a good share of the flock. But alas, we had not gone far when their wary eye had caught a glimpse of us, and after giving a warning note they flew in different directions. One lit in a fair sized elm tree in the corner of the nearest woods. It was a grand sight for us boys to see him standing on the branch of this tree with head upright and as motionless as the limb he stood on. As I was the oldest I started in pursuit of this grand game bird; crawling along an old rail fence to a large stump about twenty rods distant from the turkey, where I was in hopes I might get a shot. I can remember it as well as if it was only yesterday—the careful aim I took at his body, and I can yet see him flutter and fall to the ground. Two excited boys ran as boys will run when they have performed a feat of this kind; and we found the turkey had been hit by mere chance; his neck was cut nearly off close to the head. But I had an inward pride about my accuracy with a rifle and did not see fit to tell where I had intended to hit the turkey.

The shooting flushed another turkey which had lit in these same woods. This one flew to a distant swamp and lit on the ground. After loading the rifle we went over to the swamp and found it a hen—skulked in under a large bog of wild grass. It was pretty well concealed, with nothing in sight but the tail feathers; I had no difficulty in hitting this one in the body. Now we had one apiece and marched home with a great deal of pride and satisfaction in our first successful wild turkey hunt.

Years have rolled by and the boys have grown up to manhood. This was my first turkey hunt and my last for years; they were soon exterminated in that locality, as they have been throughout the Northern States.

Previous to last year I had often wished I could go where I could see wild turkeys once more. My brother, Rev. L. B. U., located at Waverly, Va., was desirous of my visiting him, and knowing my weak point for hunting he wrote frequent letters describing the marvelous hunting and fishing throughout that section. I decided to improve this opportunity, and so it happened that on a bright October morning in the fall of 1893, I went to the sunny South. I staid nearly five months, visiting different sections of the State and hunting in Tide-water.

I had become somewhat acquainted with a merchant who resided at Airfield Mill Pond and he had extended a very urgent invitation to my brother and myself to come down and he would go with us to a cypress swamp where the wild turkeys roosted. One Friday afternoon we went.

The Mill Pond had a quaint looking old grist mill and a store; these two buildings comprised the business portion of Airfield. A half-dozen old-fashioned two-wheeled carts, each with a mule or a steer hitched between the shafts, were standing in front of the buildings, some loaded with corn for the mill and others with peanuts, to be traded at the store for groceries and dry goods. To Northern folks these carts look very odd indeed.

The merchant, D. B., was a jolly, good-natured fellow, but not much of a hunter. The sun lacked about a half hour of setting, and shone out clear and bright, when a party of four of us started in pursuit of turkey. My brother and the miller went on one side of the swamp, and the merchant and myself on the opposite. I was very much amused to see D. B. start off with a light-colored suit of clothes, nearly white in fact, and with a white straw hat—a brand new one from the store.

Thirty minutes' walk brought us to where the large cypress trees were pointed out to me, in which they were in the habit of roosting. I soon found a good hiding place in the top of an oak that had been chopped down when the leaves were all on. D. B. went about 300yds. further down and selected the charred remains of an old pine that lay on the ground, his clothes making a marked contrast with his hiding place. In about thirty minutes three wild turkeys put in an appearance twenty rods from D. B., offering a fine shot for the rifle, which lay by his side. Two of the turkeys marched straight toward him and nopped up on a log that was pointing straight at the hunter dressed in white; and there they stood, both in range, playing peek-a-boo with D. B., who was on all fours, and dared not move, to say nothing of shooting. It was certainly a picture for an artist. The turkeys discovering that it was a hunter not very well disguised, gave their warning note, and all three flew into the swamp. D. B. was now released and related his experience with the turkeys to me, which only had a tendency to arouse my zeal for one of these fowl.

It was getting quite dark and I began wading out into the swamp. After wading about twenty rods I could see a large gobbler perched on a limb in one of these large cypress trees 200yds. away. I moved very cautiously until within 60yds. of the tree. My gun was loaded with buckshot, the left barrel with B.B. I took deliberate aim intending to shoot the right barrel, but by carelessly having both fingers on the triggers both barrels were discharged. The report echoed and re-echoed over this lonely swamp; a Mr. Barker who lived on the opposite side of the swamp told me the next morning he had not heard such a noise from a gun since the war. The gobbler spread his wings and sailed down to the ground, but I did not succeed in finding him until the following morning. Five of the buckshot had hit him. This was as fat a turkey as I ever saw and was the last turkey I

have shot. I found squirrel and wild duck very plenty, and they afforded me a great deal of sport.

I heartily wish I could extend to every true sportsman a similar trip.  
FRED UNDERWOOD,  
OHIO.

STORIES OF EZRA.—III.

Mac Smith Gets Ezra Riled.

In September John Smith, his brother Mac, Ezra and I hired Clint, Burnham to take us over to Adair county on a big chicken shoot. We borrowed a lot of fence posts of one of the settlers, made a six-sided pen of them, leaving an open place wide enough for a doorway, "chinked" the cracks with hay, stacked hay on top of it, put two feet of hay inside for bedding, and felt that if we were not in clover we were at least in hay.

The grass was fairly alive with chickens and everything went smoothly till one afternoon Mac went off shooting by himself, all the rest of us, with the team, going in the opposite direction. We did not get back until nearly ten o'clock that evening, and, of course were tired and very hungry, and consequently cross. Mac's dog was at the camp but Mac was not. We at once surmised that Mac had probably shot himself, as he was an awkward, careless fellow, always getting in some sort of a scrape. Heavy yells and much firing of guns failing to bring any reply from Mac, all thought of rest or supper was abandoned till he should be found. We had about completed the arrangements for the gloomy search, expecting that if we found him, it would be only his dead body, when Mac himself came out of the darkness and said, "Is supper ready?" Ezra, fairly blazing with wrath, turned on him, and catching him by the collar, said fiercely, "Where 've you been?"

"Been huntin', of course, why?" said Mack, looking very much surprised at Ezra's manner.

"Why," said Ezra, "why? Didn't you hear all that 'boller'n' 'n' shootin' here at the camp?"

"Course I did. Reckon everybody in Adair county could hear that."

"What'd you reckon we was doin' all this for, eh?" giving him another shake.

"Quit a-jerkin' me that a-way; I 'lowed you was doin' it 'cause you thought I was lost."

"Then why in [shake] Sam [shake] Hill didn't you [shake] answer? eh?"

"Why," said Mac, in wide-eyed astonishment, "I wasn't lost, I was eatin' a melon right over there at the water-melon patch. Why?"

Hungry, tired and exasperated as the rest of us were, we all laughed, and everybody set to work getting supper. The table was a flimsy affair made of some half-inch boards cleated together and laid on four stakes driven in the ground. Ezra was very fond of crackers, and his way of eating them was to put two in his mouth, grind them to dust, and hold the dust in his mouth till moist enough to swallow. Mac sat next to Ezra at supper. The incident of the evening had set us to talking about firearm accidents. At supper, Ezra remarked, "If some of us were to get shot I don't believe I'd ever get over it," immediately afterward putting two crackers in his mouth and smashing them. Mac, as usual, said "Why?" Ezra, still having his mind full of wrath and his mouth full of crackers, was too full for utterance. He put his mouth to Mac's ear and blew the cracker dust into it with all the force he could. Mac fell over backward, his toes hitting the under side of the table, knocking it higher than our heads and spilling everything on it on our laps and in the hay. Ezra followed up the onslaught with "You great thick-headed galloot, are you ever going to learn any sense?"

Mac looked up and said, "Why?" O. H. HAMPTON.

Fort Kennedy Wild Turkeys and Squirrels.

CUFIO, Ky., June 11.—This was once a fine game country. My father moved to this part of Kentucky forty years ago, and I well remember his going out through the hills to attend to business and on coming home telling my mother that he had seen several deer. I have often seen fine bunches of wild turkeys around the corn shocks on winter mornings. My father cared very little for hunting but would sometimes catch some very fine ones in a turkey pen. A friend and hunting companion was telling last week that he knew of a flock of several young wild turkeys back in the hills, and if I live I will try hard to get a bead on one with my Winchester this fall. Squirrel hunting is still very good in these parts at certain times of the year. In August they begin cutting on the hickory and afford fine sport. I sometimes have gentlemen come out from Louisville to hunt the gray squirrel with me. In the winter season I usually hunt them successfully with a dog and use a .22cal. Ballard rifle with a set of Lyman peep sights. I never kill more game of any kind than I can make use of in my family with ease. I hear men say they can not help killing all they have a chance at, but I make it a rule to quit with a reasonable bag, say from two to six squirrels.

R. B. S.

Stop the Sale of Game.

A PLATFORM PLANK.—The sale of game should be forbidden at all times.—*FOREST AND STREAM*, Feb. 10.

FOX LAKE, Wis.—You are doing a grand work and we trust that in the near future the sale of game and spring shooting will be abolished. Over 5,000 ducks were killed and shipped from our little lake the past spring, mostly by Milwaukee shooters. The late freeze up left a few open holes; and one man with four guns and a man to load killed 150 in less than half a day. W. E. W.

PUBLISHER'S DEPARTMENT.

Hulbert Bros. & Co. issue a large general catalogue of sportsmen's goods.

Every angler should have a "Scott" outfit for repairing, manufactured by Dame, Stoddard & Kendall, Boston.

In renewing the advertisement of his hotel, W. R. Bishop, of the Cranberry Lake Hotel in the Adirondacks, writes that he gets more correspondence through *FOREST AND STREAM* than any other advertising he ever placed.

YACHTING CRUISES.—The Quebec Steamship Co. have arranged two special summer cruises from New York and Boston to the British Provinces, the first of which will leave New York July 3 and the second Aug. 4. These cruises, which are characterized as "yachting," will take in the Bay of Fundy, the Gulf and River St. Lawrence, the Saguenay River and Quebec, and will afford an opportunity of visiting Lake St. John, the home of the leaping ouananiche. A handsome little circular will be sent those desiring further particulars by the New York agents, A. E. Outerbridge & Co., 39 Broadway.

Sea and River Fishing.

BOSTON MEN IN MAINE.

BOSTON, June 16.—More of the trout fishermen are returning every day. Generally the experienced fishermen have been having reasonable luck, if luck it may be called. But they go off with the season. They study the time and all the conditions. They have had years of experience. Truly success should go with such well-directed effort. Mr. Walter L. Hill with Mr. Wilder, of Lowell, his friend, has just returned from a successful trip to Moosehead. They took a good number of square-tailed trout and a few lakere. Their largest square-tail weighed about 4lbs. But they caught a lakere weighing some 9lbs. Mr. Hill is more in love with Moosehead as each annual trouting trip goes around. Mr. George Linder, with Mr. Benjamin Hurd, has also lately returned from Moosehead. Mr. Linder and his friends go for fly-fishing only. They make a rule never to troll for trout. They try them faithfully every day, when the weather permits, with the fly. If they rise, then there is rare sport. If they do not rise, then there is the camp and the enjoyments of camp life. Mr. Linder says that he used larger flies this year than usual, and he is satisfied that they are better. He believes, after years of study of the subject, that the trout do not see the fly when the water is rough, and that a large fly is more likely to be seen than a small one. Somehow this Linder party is fully as successful as the bait-fishermen and the trollers—the reward for the amount of study and skill its members put into fly-casting and fly-fishing. The produce party, at Moosehead, one of the largest parties of the season, was fairly successful, though going rather early and striking the worst of weather.

Mr. C. H. Andrews and Mr. E. B. Haskell, senior proprietors of the Boston *Herald*, are about starting on a fishing trip for black bass. They go to the Belgrade, Me., ponds. One or two friends may accompany them. The Col. Rockwell trouting party, that recently visited Allerton Lodge, the beautiful camp of Messrs. Haskell and Andrews, on Lake Mooselucmagantic, was fairly successful with trout, though they had high winds and "beastly weather." Mr. Curtis of that party took a trout weighing 7lbs.

The Messrs. Blake are going this year to Prince Edward Island, for fishing. They are to follow in the footsteps of Mr. Daniel Gunn, who went down there last year and had good success, and he has explained the way to the Messrs. Blake. Mr. Gunn, it will be remembered, has succeeded in landing a shark, a young whale and a sea serpent, all at one cast, and it was not a good day for fly-fishing either. Now will the old codfish again wink his eye when he sees this number of the *FOREST AND STREAM*. Mr. Gunn is a senior member of the printing trade of Boston and a man liked by everybody.

A new salmon fishing club, so far composed of Boston and New England business and professional men, is being formed this season. Control has been obtained of the southwest branch of the Miramichi, largely through the exertions of Mr. W. A. MacLeod and Mr. E. S. Beach. Both are bright young gentlemen of the legal profession. Some fifty lovers of the rod and reel have signified their intention of trying the Miramichi waters this season, under the management of the new club. Four fishing parties have been arranged from this number. The first party was to leave Boston on Saturday, June 16. Among the number about sure to go may be mentioned Mr. W. A. MacLeod and Mr. E. S. Beach mentioned above. Mr. Fred. W. Ayer, the well-known Bangor, Me., lumber owner and dealer, is also to be one of this first party. Mr. Ayer, it will be remembered, is the gentleman who has done so much to bring out the possibilities of the salmon pool at Bangor. In the party will also be J. P. Livermore, of Boston, Mr. F. B. Greene, of New Bedford, and Mr. A. J. Parsons, of Boston. Of their experience and success, the *FOREST AND STREAM* should have some account later.

Some of the members of the Magaguadavic Club have lately returned to Boston from the first fishing trip of the season to the home of this young club, in New Brunswick. The club has some fine lakes and streams under its control. It is presided over by Mr. C. W. M. Guild, of Boston, an angler of a good deal of experience and good success. Two members of this first party caught forty-eight trout on the fly, the united weight of which was 74lbs., the largest weighing 3½lbs.

The members and invited guests of the Megantic Club, who have returned from their spring fishing, express themselves as greatly pleased with the club and its appointments. The stewardship of Mr. Fred. M. Viles is spoken of as highly satisfactory, together with his able corps of assistants. Some 4lb. trout have been taken from the Arnold Lake, and one or two from the Upper Spider. The fishing was never better, especially the fly-fishing. It is pleasant to state that members and guests of this club are advocates of fly-fishing. But very little trolling is done, in fact, except in some of the waters where togue or lakere are found. From the Chain of Ponds lakere up to 9 and 12lbs. have been taken this season.

Mr. William B. Smart, of the Boston *Post*, an angler and true sportsman, annually passes a few weeks in trout fishing in the vicinity of Phillips and Rangeley. He returned to Boston on Saturday, from Reddington, where he had excellent fishing on the streams that can be reached from the Little Railroad. SPECIAL.

A Curiously Marked Hornpout.

MONTPELIER, VT.—Let the albino experts have this from Vermont: Mr. Geo. Smith, conductor on M. & W. R.R., showed me to-day a live hornpout of 7 or 8in. that was taken from Kettle Pond, near Marchfield, by Mr. S. E. Willis, a Plainfield fisherman. This fish has one red eye and one of regular color. It has a silvery belly and golden sides. It has on each side, well up on the back, a streak of silver running from head to tail, and the fins and tail are silvery, showing the blood markings of a dressed fish of ordinary color. GANTRIC.

The *FOREST AND STREAM* is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## FISHING ON THE SHENANDOAH.—II.

(Concluded from page 512)

THE local customs of the resident fishermen, some of whom along the upper river are noted for their success, are peculiar and interesting, while the town fishermen use light tackle—either a light bamboo or lancewood fly or bait rod, or a short Henshall rod with light line, leader and rather small hooks. The local fisherman uses tackle of enormous proportions, calculated to strike terror into the heart of the stranger. The pole (for it certainly is anything but a rod) is usually of the cane species, and is seldom less than 20ft. long and large in proportion, and would make a fairly respectable steamboat jackstaff. It must, of course, be used with both hands. The line is of oiled silk, rather thick and heavy, and of considerable length, rarely less than 200ft., and is wound upon a large multiplying reel, which is usually lashed to the butt of the pole. Two very large snelled hooks are used (without leaders) about 4-0 Carlyle being the usual size and pattern, and with this tackle, and standing up in the boat, the large, heavy "mad toms" can be cast out over the water to a considerable distance. No sinker is used (except in fishing from the bank), even in swift water, as the line is generally allowed to run out with the current to a great length and a sinker would be a source of endless trouble in fouling among the ever-present reefs.

The local fishermen seldom fish from the bank; but either wade—not infrequently up to the shoulders—or, as more usual, fish from a boat, which is a broad, flat-bottomed, comfortable, slow moving affair about 20ft. long and capable of holding six or eight men, and is always propelled by a long pole wielded by a man standing in the stem of the boat. Some of the fishermen and boatmen attain great skill in handling these clumsy, heavy boats, and they can be forced up a rapid or against a swift current by this means, where a pair of oars would be utterly ineffective.

The boat is anchored directly across the stream, where the current will permit, by means of a heavy stone at each end; generally attached to a piece of fencing wire, that will not chafe or cut on the reefs, and the anglers make themselves as comfortable as circumstances will permit, casting down stream, of course, and letting the line run out in the current to considerable length; while these in the ends of the boat, of course, have considerable side sweep. When a strike is secured, the line is paid out to the fish to a considerable extent—some 20 or 30ft.—before striking, and the fish allowed to run with the bait. After running some little distance the fish usually stops; and when he again gets under way, the angler strikes, with a steady, sweeping pull on the long sagging line, which rarely fails to hook the fish.

The theory that the fish seizes the bait by the tail and then ejects it and turns it head first before swallowing, seems to be well founded, and is sustained by careful observation; for, if struck too soon—before turning the bait and getting the hook well in his mouth (the bait is usually hooked through the lips) the fish generally escapes; and when the line is reeled in and the bait examined, it will be found to be scored with the marks of the teeth of the fish—in some instances, crushed and killed, the marks being always on the lower part of the body down to the tail, showing that the bait was seized tail first; while when a fish is caught, if the bait is still in his mouth (for frequently a bass strikes so ardently that the bait is sent spinning several feet up the line, or is thrown clear off) it will be found to be swallowed head first, with the tail sticking out of the fish's mouth.

When struck, the fish is reeled in and landed as quickly as possible, without any preliminary playing; indeed, with such tackle, which is capable of lifting a 3 or 4lb. bass bodily out of the water and into the boat without undue strain upon pole, line or hook, "playing" is unnecessary, and the local fisherman is generally desirous of landing and securing his fish as promptly as possible. In fact, I confess to the same desire myself; and never indulge in any more playing than is necessary for the safety of my tackle, having no particular relish for the cat and the mouse game.

In wading, their long, heavy tackle strikes me as being bulky, cumbersome and unhandy to the last degree; and I find my little 8oz. steel Henshall rod of 8ft. 3in. with a medium weight line—not too long—to be as near perfection for this kind of fishing as is attainable in this imperfect world of ours; but in boat fishing the heavy long tackle possesses some undeniable advantages. In some two or three weeks' fishing in the Bear Lithia neighborhood last summer, most of which was done from a boat, there was not a day's fishing in which I did not lose one or more fish from having the fish shoot under the boat or foul the anchor chain. The fellows with the long heavy tackle, if their fish made for the boat, could check him or steer him off, while with my light, delicate tackle, if my fish took a notion to go under the boat, I had to let him go or smash my rod.

While the Henshall rod is unequalled for wading, probably the best tackle for boat and shore fishing is a rather stout lancewood or steel rod about 10ft. long and fully as many ounces in weight, which is stiff and heavy enough to safely snub a fish when he darts under the boat, and long enough to be serviceable; with 150ft. of good, medium weight oiled silk line (not enameled) and hooks of medium or fairly large size, ranging from No. 2 Sproat to 2-0 or 3-0 Carlyle, with or without leaders, according to taste. I always use a 6ft. looped leader, but I cannot say that I consider it strictly essential in bait-fishing.

In fishing from the bank a sinker is, of course, a necessity. The generally accepted method used by Shenandoah fishermen of preparing and using a sinker is to prepare a number of different sized pieces of lead by first splitting them with a chisel and then closing up the split by means of a hammer with some six or eight inches of common white cotton wrapping twine or string closed in the split or opening. One of these sinkers thus prepared is selected, the size and weight depending on the character of the water, whether swift and shallow or deep and still, and tied to the end of the line, and the hook (for but one hook is used in shore fishing) attached to the line some 18in. or more above the sinker.

A small piece of cork looped in the middle of the snell or snood of the hook will not add to the neat appearance of the tackle but will prove invaluable in keeping the bait off the bottom, which, considering the tendency of mud-toms and helgramites to creep under rocks, is quite an essential. The advantage of this peculiar combination is

that the hook is kept off the bottom, and if anything fouls (and in such reedy waters fouls are of common occurrence) it is the sinker, and by a steady, strong pull the string will break instead of the line or hook, and the tackle will come free, leaving the sinker in the river instead of the hook; and as lead is much cheaper than hooks this is of no special importance.

In fly-fishing in the Shenandoah, as elsewhere, the finest and best tackle is the most satisfactory and produces the best results; the popular theory of the small boy with the willow pole, the tow string and the pin hook to the contrary notwithstanding. A fine bamboo or steel rod, from 10 to 11ft. in length and of moderate weight, not too light, an enameled, tapered, size F line wound on an Orvis reel (25yds. is sufficient), a 6-foot looped leader of heavy single gut, and two flies of moderate size—No. 4 being about right—will probably prove most satisfactory. The bright-colored flies, such as scarlet-ibis, Parmacheene-belle, white-miller and professor, seem to be the most attractive, although I have had considerable success with the Governor-Alford, particularly in trolling, where the slow, steady drag of this mouselike object through the water seems particularly tempting. George is a particularly skillful and successful fly-fisher, and his favorite combination is a bright fly as dropper and a dark one as tail fly. His theory is that the fish is attracted by the bright fly, and if in making a dash for it he should miss it, or for any reason decline it, the dark fly is close at hand and is seldom missed. Whether this theory is correct or not, his uniform success would seem to indicate that there is at least something in it.

The fish do not, as a rule, rise or break above the surface, but generally strike from below, and it is but rarely that I see a fish take the fly, unless I am standing on a reef or other elevation from which I can look down into the water and see him make his rush; consequently, in casting, the flies should be dropped lightly out upon the water and allowed to sink a few inches below the surface—a foot is not too much, and then be gently drawn in through, not over, the water. I generally get my strikes just as this drawing-in movement has begun. It is not usually necessary to put out a great deal of line, except to search special places or spots not otherwise attainable.

George and I have had some of our finest sport in trolling from our canoes on our various cruises, as we cruise along. A collar of flies is attached to the line as in ordinary fly-fishing, and the casts made from the canoe, throwing from side to side until some 40 or 50ft. of line is out, after which the rod is laid out over the stern of the canoe (the reel at the canoeist's feet, so placed that it will turn freely and readily), and the tip projecting aft under his right arm, with the line trailing out astern. The paddle is then taken up and the course resumed. A sharp lookout must be kept for stray ledges, and in running rapids or threading intricate, reedy places, the line is taken in. When not in use the tackle is carried on the decks of the canoes, being secured by a simple contrivance.

It is not advisable to use a fine fly-rod in trolling, as in spite of care fouls will occur, and before the canoe can be checked and turned the rod is liable to be sprung or broken. I once ruined two tips in one afternoon in this same way, while on the same day George only saved his rod by dropping it overboard, a tedious half hour's fishing being required before he could find and recover it. A common stout lancewood or steel rod, moderately heavy, is best for this kind of work. When a strike occurs the fish promptly notifies the canoeist that he has arrived by a jerk that makes the reel whiz with a vigor and suddenness that never fails to startle him, however much he may have become accustomed to it. The paddle is then dropped, the rod taken up and the sport commences. If the fish does not much exceed a pound in weight he may be landed aboard the canoe without much trouble, although at all times a landing net is a necessity that cannot be dispensed with without risk of losing the fish; but if a large, heavy fish is struck great care and patience are required in order to successfully handle him from the light, cranky canoe and get him safely aboard. I once saw George strike a four-pounder which gave him a fight of at least twenty minutes before he succeeded, and during which fight the fish actually towed George's canoe slowly and gently clear across the river in his rushes, until he had worked him in so close to the right bank that I had to come to the rescue by paddling gently in and secure his bow painter and towing him out into midstream, where he finished the fight and landed the fish. This sounds like a veritable fish story, but it is a fact.

The local fishermen handle their immense tackle quite skillfully and effectively, but when placed for the first time in the hands of a man who has not been brought up on it, it is usually quite alarming. I was out one day last year with Will Compton and Tom Naylor of Bear Lithia, and Will's father, a prominent member of the Harrisonburg bar. Compton, Sr., is an enthusiastic expert fly-fisher, and it is doubtful if he ever before caught a bass with bait. He had run over to Bear Lithia from Harrisonburg for a couple of days, and not expecting to fish brought no tackle with him; and his consternation may be imagined, when one of these 20ft. flagstaves—haliards and all—was placed in his hands, and he was told to fish with it.

In the fullness of time, Compton, Sr., got a strike.

"Give him line! Give him line!"

"Let him run!"

"Give him plenty of time!" were samples of the advice showered on him by the full strength of the company, as he sprang to his feet, the better to handle his cumbersome unaccustomed weapon, and was on the point of striking promptly, as he was accustomed to do in his fly-fishing experiences. He recovered himself and paid out some 15 or 20ft. of line, which the fish took up as rapidly as it was paid out.

"Now strike!" exclaimed Naylor, as the fish, after pausing a little, started off briskly again.

Compton Sr. struck; not with the long, steady swing of the native, but with the sharp, quick, fly-fishing, 6oz. rod strike, forgetful of the tremendous latent energy stored up in that 20ft. pole. The fish—about a 4-pounder—came up flying out of the river, through the air, directly toward the boat. Everybody dodged, but there was no danger. That fish sailed up the river like a flying fish, high above our heads, the full length of the 60 or 70ft. or so of line out before he dropped into the water again. There was a shout of laughter, and Compton Sr., who probably in all his previous existence had never been guilty of yanking a

fish out of the water like that, sat down covered with confusion, while he reeled in and landed his fish, receiving, meanwhile, the congratulations of his friends.

He got the fish though, which afforded him some consolation. COMMODORE.

## NIAGARA COUNTY CLUB'S OUTING.

LOCKPORT, June 8.—The Niagara County Anglers' Club has attained more than a State-wide reputation for the success and attractive features of its annual excursions and tournaments. This year the time for the jolly outing was extended to two days; the place as heretofore was Youngstown on the Niagara River, near Lake Ontario, where black bass abound, and perch and herring fishing is excellent.

For nearly six weeks the club has held frequent meetings in preparation for the ninth annual excursion and tournament, June 6 and 7, which was to surpass all previous efforts of the banner fishing club of the United States. By the way, the last clause in the preceding sentence is no idle boast, for the organization now has the support of 268 active members. President Wm. H. Case, Vice-President John F. Little, Secretary F. K. Sweet, and Treasurer Geo. W. Weaver devoted their time faithfully to the preliminaries. In addition committees were appointed, and their work in each case was well executed.

A special train was chartered to carry the anglers from this city via Suspension Bridge to Lewiston on the Niagara River. General Western Passenger Agent E. J. Weeks, of the N. Y. C. R. R., who has many personal friends in the club, gave this important train the right of way in preference to all others on the line. Promptly at 6:30 A. M. Wednesday the train crowded with the merry anglers left the depot. The forward car bore the inscription "Niagara County Anglers' Club." At Suspension Bridge the Lockportians were reinforced by the Niagara Falls members.

At Lewiston the steamer Anna F. Owen met the party, conveying the contestants to Fort Niagara, at the mouth of the Niagara River. Along the dock was a long line of oarsmen numbered ready to row the several pairs of "red" and "blue" anglers to the fishing grounds near by. On the boat Captain Charles L. Nicholls and Captain G. Louis Holmes had selected their men. Subjoined are the two sides that fished for a banquet to be given by the losers in this city next week. There were a great many members of the club who fished, but not in the tournament. With the names is given the number of small-mouth black bass caught by each man without reference to the heavy catches of perch, herring, bullheads, eels, rock bass, etc.

Judge Millar's steam yacht whistled the signal for the cast of lines, and the fun began. These rules were followed both days:

1. Signal for prize fishing—Three whistles denotes starts and stops.
2. Hours for fishing—First day, 9 A. M. to 7:45 P. M.; second day, early dawn to 7 P. M. start at the option of each angler.
3. No two contestants on the same chosen side for the banquet will be permitted to fish in the same boat. It is optional with members to enter in this contest.
4. Each person will be allowed to fish with but one rod and line, two hooks and bait. Artificial bait allowed.
5. Boats will be numbered, and the person drawing the corresponding number will be entitled to that boat.
6. Agreeable changes will be permitted in boats provided Rule 3 is observed.
7. The high hook banner will be in the boat having the largest black bass.
8. Each person will be provided with a score book and at the end of each day will record his score and the catch. The catch must be exhibited to judges and scores handed to them each day.
9. The tournament will be decided upon points as given in the schedule of fish adopted by the club.

In the schedule, for example, black bass counted 50, pickerel 25, perch 2, rock bass 2, eels 30, bullheads 25, white bass 20, herring 10.

Owing to heavy rains for a month past, the river and lake were quite muddy, especially the first day, so that few black bass comparatively were caught. The regatta of boats had not been out on the water two minutes before W. E. Huston of the "blues" captured a 3lbs. black bass. His comrades cheered lustily as the high hook banner of the club was conveyed to his boat by M. N. Haskell, who held it last year. Mr. Huston's triumph was short-lived, for within 20 minutes W. W. Stevens, proprietor of the Commercial Hotel, had taken a larger bass, and with it went the banner. Ed S. Bennett of the "reds" soon stopped the merriment of the other side by demanding the banner upon landing a still larger fish after a lively tussle.

And thus the sport went on. At noon the Owen carried the party up to Youngstown,  $\frac{1}{4}$  miles, where they dined at the El Dorado. Notes were compared and it was found that the blues were only 45 points behind. In the afternoon a northwest wind made heavy water, but the fishermen stuck bravely to their work. Up the river good catches of perch were made. The bass fishing was pretty generally abandoned for that day. The anglers were doing what they could toward securing the individual prizes for best strings of perch and mixed fish. When 7 o'clock came there were very few who had not caught some fish despite unfavorable water and cool weather. Every bold angler felt somewhat tired and ready for the clam-bake already steaming on the beach.

The word "clam-bake" does not have a soothing effect upon any member of the Niagara County Anglers' Club—and thereby hangs a tale.

The special committee on the clam-bake made elaborate

preparations. Ten barrels of clams were bought, 300 lobsters, 200 chickens, 500 ears of green corn and 5 bushels of potatoes, with a quantity of sea grass. To prepare all these delicacies according to the rites of the most sacred "down-East" clam-bakes, they had hired an expert from an Eastern city. The professional failed to materialize Wednesday morning. Nothing daunted, the members of the committee had the hole dry and lined with stone upon which several cords of wood were burned during the day. About 7 o'clock the clams, etc., were deposited upon the heated stones in regulation layers. The funereal canvas was placed over the savory mound—but they forgot the covering of earth!

The new moon looked down upon a glorious scene. The summit of the land was crowned by historic old Fort Niagara, where the Stars and Stripes waved defiance to the cross of St. George across the river. On the green sward along the shore, bounded by lake and river on the north and west, was a vast concourse of people waiting to be fed. They were hungry, yet withal happy. Little groups of fishermen, with rods in air as staunch as the old lances of Lynwood, just in from the piscatorial fray, conversed with their guests, soldiers from the fort and civilians assembled upon their invitation from all over western New York. The Twenty-fourth Regiment band played "Hail Columbia," "Yankee Doodle" and other patriotic airs. The church chimed across the way, sweeter far than St. Smithin's, played "God Save the Queen." "Home Sweet Home" proved a far more appropriate selection later, as will develop.

Bonfires were built, big fish stories, many of them excerpts from FOREST AND STREAM, were related and all went merry. But the bake was not yet done. Nine o'clock arrived and the report was that some of the lobsters were still alive, while the potatoes were hard enough to furnish balls for the frowning guns of the fort.

Ten o'clock came and the tables were still ungraced with the clams and chickens. Secretary Sweet brought forth the "illustrated regrets" from Editor Reynolds, and showing it again to some fellow anglers, remarked that it was well the FOREST AND STREAM man did not come, only to be starved. The crowd was rapidly growing pessimistic. Here and there assaults were made upon the sandwiches, radishes and coffee, all hope having been abandoned for clams that night. At 11 o'clock a wild stampede was made for the hotels at Youngstown and the landlords requested to set out luncheons at short notice. A squad of soldiers was left to guard the tardy clam-bake, which was well spoiled by morning. The committee brought up the rear of the retreat in a carriage, each murmuring "*Sic transit gloria mundi*." As the sentinels were passed one by one through the mile of territory owned by Uncle Sam the challenge, "Who goes there?" was always satisfactorily answered by the countersign, "Clams."

The sun rose in a clear sky next day and with it rose the spirits of the disappointed fishermen. They forgot clams in the excellent prospects for bass, much worthier game. Expectations were largely realized, for the contest the second day was much more exciting, the biting being quite brisk. Jerome E. Emerson, cashier of the Farmers' and Mechanics' Bank, early in the day made the "reds" jubilant by the capture of a 3½ lbs. black bass. The lead secured by the "reds" the first day could not be broken. For the "blues," the old champions, Charles W. Hatch, Judge David Miller, ex-Sheriff Nathan D. Ensign, Postmaster John A. Merritt, Alderman Burt Stevens, Alderman James McGill and Jacob Fisher did not seem to be in good form. On the other hand, Archie L. Smith of the "reds" was maintaining his reputation, coming in the second evening with seven black beauties. Jerome E. Emerson captured six, D. A. Hixson and W. H. Upson four each for the "reds." A tabulation of the individual scores showed that the "reds" had won the two days' fight by 3,210 points to 2,660 points for the "blues."

The awarding of individual prizes by the judges, David Millar and Jerome Emerson on the boat going home, was attended with lots of fun. Claimants for the several prizes often had their disputes settled by the scales, where an ounce cut a very important figure. Subjoined are the lucky members and their prizes:

- Largest small-mouth black bass (automatic reel, by M. N. Haskell), won by Jerome E. Emerson with a bass weighing 3½ lbs.
- Second largest (nickle plated filter, by Carter Filter Co.), won by Joseph Dumville, bass 2½ lbs. 5oz.
- Third largest (white vest, by Buddenhagen & Son), won by George E. Emerson, bass 2½ lbs. 5oz.
- Fourth largest (split bamboo rod, by D. G. McKim), won by W. W. Stevens, bass 2½ lbs. 3oz.
- Largest string of small-mouth black bass (Belial trout rod, by Theodore Baldwin and gold badge by the club), won by Archie L. Smith, 7 bass.
- Second largest string (landing net, by F. K. Sweet), won by W. H. Upson.
- First small-mouth black bass caught, W. E. Houston, two minutes after the signal for fishing Wednesday morning, taking the club's high hook banner. This will be held during the year, however, by J. E. Emerson, who caught the largest black bass.
- Largest string of mixed fish (trunk-split bamboo rod, by L. H. Staats), won by C. W. Hatch; 19 perch, 2 black bass, 1 eel, 4 rock bass.
- Second largest string mixed fish (floating bait-pail, by W. A. Williams), won by H. C. Hulshoff; 52 perch, 3 rock bass, 1 white bass.
- Largest string of perch (tackle box, by C. W. Hatch), won by John Klopff; 52 perch.
- Second largest string of perch (gold match-box, by Geo. W. Weaver) won by Will R. Smith; 40 perch.
- Largest string of herring (box of cigars, by Eddie F. Smith), won by L. G. Holmes; one herring.
- Boatman whose party caught the largest number of fish (bat-rack and stove-mat, by John E. Mack, won by boat No. 15, Mr. Todd rowing, Jacob Fisher and Will R. Smith.
- Second largest catch (50 lbs. sack of flour, by Griggs Bros. & Ellis), won by boat No. 24, Fred Masher rowing John Buddenhagen and Henry Hulshoff.

At 9 o'clock last night the anglers returned bearing precious burdens. Tanned they were and tired, yet happy with the pleasant reminiscences of two jolly days stored against the days when troubles come.

Reader, if you are a fisherman and enjoy good company, you should go with the Niagara County Anglers on their next annual excursion and tournament at Youngstown. M. H. HOOVER.

Spanish Mackerel.

MOREHEAD CITY, N. C., June 15.—Two of the guests of the Atlantic Hotel went trolling yesterday and caught in three hours 140 Spanish mackerel. It is not an unusual occurrence for parties of four or five to bring 300 mackerel and bluefish in a few hours. Cero and pompano are caught in quantities also. The shooting here is good—snipe, willet and curlew, besides deer on the beaches. B. L. PERRY.

CANADIAN ANGLING NOTES.

Editor Forest and Stream:

Reports have reached here of excellent fishing had on the lakes in the St. Maurice region, which are reached from Three Rivers by the Piles Branch of the C. P. R. and from Quebec by the Lower Laurentides, a branch of the Quebec & Lake St. John Railway.

Mr. Brackett, of Boston, the eminent fish artist, left here on Friday for his salmon fishing grounds on the Marguerite. During the coming week he will be joined by Mr. Henry Russell, general attorney of the Michigan Central Railway, who is now fishing the Grande Discharge for ouananiche, together with Mr. Robert E. Plumb, general manager of the Michigan Peninsular Car Co.; Mr. L'Hommiedieu, assistant general superintendent of the Michigan Central Railway; Mr. J. D. Hawks, manager of the Detroit, Bay City & Alpena Railway, and Mr. Gardner T. Lyon of Oswego, N. Y. These gentlemen came to Quebec by special car, and proceeded on it to Lake St. John. On the way they stayed over at Lake Edward, and enjoyed good trout fishing. What havoc they have wrought among the ouananiche is not yet reported, but they are expert fishermen and must have had rare sport, for the ouananiche are so abundant just now at the head of the Discharge, that several cases are reported in which from 60 to 70 fish fell to a pair of rods in the early part of the present week. Mr. Plumb and Mr. Lyon are about to fish the main branch of the Marguerite for salmon in company with Messrs. A. L. Barney, Roland Mitchell, N. C. Barney and W. B. Williams, of the St. Marguerite Salmon Club.

Mr. John C. Eno and his eldest daughter and Col. Wilson of this city have been very successful in their struggles with Lake St. John ouananiche this week. It is interesting to note, as proving the absurdity of the story that the ouananiche are landlocked and cannot get to sea, over the obstructions of the upper Saguenay, that a little over a fortnight ago a number of these fish were taken by rod and line in the mouth of the Chicoutimi River, within the limits of the town of that name at the head of steamboat navigation. Mr. Lyon also tells me that he, like Mr. Brackett, has taken ouananiche at the mouth of the Marguerite. The Chronicle of this city is out in a vigorous campaign against the reported netting of ouananiche in several localities at Lake St. John.

Judge Kellogg of Waterbury, Conn., and a party of friends, including Messrs. A. W. Reed of Baltimore, and Rufus H. Thayer of Washington, D. C., went up to their trout fishing waters at Lake Bouchette a few days ago, and Prof. Wm. G. Mixer of Yale University and other gentlemen from Whitehaven left here to-day to fish at Lac Commissaire, the headquarters of the Nomantum Club. Mr. Geo. Lawrence, Jr., of New York and a friend left by the same train for the Grande Discharge. Messrs. G. E. Hart and J. L. Atwood of Waterbury, Conn.; Wallace Durand of Newark, N. J., and Miner Drake of Torrington, Conn., returned home a little over a week ago, after a stay of two weeks and a half upon their fishing preserve on Lake Commissaire and neighboring waters. In addition to splendid sport among the trout of that region, some of which exceeded 5 lbs. in weight, they took ouananiche up to 5½ lbs each at Lake St. John, and Mr. Durand is the happy possessor of a splendid skin and head of a Canada lynx, which he prizes the more highly that it fell a victim to his own rifle on the shore of Lake Commissaire.

Among the anglers who have enjoyed good sport in Lake Edward this spring may be mentioned E. S. Herrick, T. Henderson, J. C. North, S. D. Curtis and W. D. Hall, Albany, N. Y.; H. K. Barstow, A. G. Pierce, L. F. Lassill, E. H. Shattuck, J. W. Jones, Van A. Nye and H. Nye of Burlington. Many of the above took *fornitalis* weighing from 3 to 5 lbs. apiece, mostly with bait, though good fly-fishing is to be had up Rat River, one of the lake's feeders. E. T. D. CHAMBERS.

QUEBEC, June 16.

IS THE FISHING GONE FOREVER?

CHARLESTOWN, N. H., June 12.—I am sorry my friend "Mascomy" had such poor luck in Vermont; I knew the region he visited well, 30 years ago, and have had great success there, in Stratton, Winhall and Penn.

Trout fishing in this region is a thing of the past, and, I fear, with the destruction of the forests is gone forever. I am glad I had a chance to enjoy it when I was young. I went out a month ago to the old brook in which I caught my first trout, more than 60 years ago, and fished a mile of beautiful water without a nibble! Last week I tried again and walked out three miles, three-fourths of the way up hill, and the last one down, to a little brook where I once was sure of a good string. The old gorge through the hills, full of falls and rapids, once shadowed by old trees through and under which it was easy traveling and good fishing, was now choked with a dense growth of young wood and underbrush through which it was almost impossible to push my way with a rod, and quite so to fish, and I began at the foot of it, where the brook comes out into an open pasture, with a few trees along the water.

I got a 7 in. trout at my second cast, soon followed by one of 6 in., and then lost another of 7, just as I reached out my hand to draw him in, for the overhanging branches had prevented me from hooking him fairly. I got one more little one, and that was the end of it. I soon came to tracks in the grass, where it was beaten down, as I got into the more open meadow, and for the next mile, until I struck the road, I only got hold of two more, and they were neither of them 4 in. long, and were soon swimming off again. One of them was not even pricked, the well-baited hook having come out through his gills! I agree with "Mascomy," that fishing in our brooks in this part of the State should be absolutely prohibited for the next three years, if we are ever to have any more of it!

When I reached a friendly farm house on my way back, I was told that a young fellow from town had been out a few days before, and got 62 trout, and I guess he got them all.

Your Ithaca correspondent, "J. H. S.," seems to have made his first acquaintance with the regular lake trout, so-called *Salmo namaycush*. His forked tail is the feature which distinguishes him at sight from the square-tailed *Salmo fontinalis*. There is nothing peculiar about them in Mill-Site Lake, they are all so.

Mr. Starbuck and Mr. France make a pretty good defense of "rodster," but I do not like the word; it might be applied to a schoolmaster (of the old English type) as well as to an angler.

Still it is far better than the modern English slang of "chucking a bug," or that other piece of euphemism, in which one of your correspondents indulges, of "stabbing" a trout, which is horrible and indefensible. It calls to mind a "Dago" and a dagger at once.

The bass season opens June 15 and I may try the river then. I hear of many large pike being taken. VON W.

TROUT TICKLING.

You may remember that three years since, if my memory is faithful to her trust, I wrote you among other things from near North Bay, Ontario, where I was having considerable of an entertainment with some of Mr. Starbuck's "dappled darlings of the wimpling waters," some notes on this, to me, new methods of securing trout. How one morning my German landlord laid by my plate seven beautiful fish—beautiful even in death—as nearly alike as seven peas, and on my questioning him as to where he caught them, said: "I catch 'em mit my handt," and proceeded to describe "trout tickling." Of course I was a "doubting Thomas" from the original family of Thomases, and gently but firmly assured him of the fact that I was aware that he was trying to gull me, but he "would none of it." And maybe you remember how we went to the mountain stream, icy cold in May, that he might give demonstration of his powers in this line, but that there was a complete failure so to do; he, however, still holding to the truth of his statement, and that further it was a common mode of catching trout in Germany.

Now comes your correspondent E. M. B., in yours of June 2, and writes of the same matter, but has his information from second or third hands—"I vouch not for the truth you see, but tell the tale as told to me." He tells how a Mr. Rich worms himself or eels himself into the water like unto a huge alligator, by imperceptible advance, and then elongating his electric arm inch by inch, as doth the manipulator of the telescope, gently, slowly, electrically, hypnotically charms the doomed trout until "fust thing you know" he is just "tickled to death."

Now, my German friend didn't lie down and gently insinuate his body into the stream. I should have been "tickled to death" to see him. He couldn't do it, for, in the first place, there were no holes in that rocky mountain stream large enough, and in the second he'd have come so precious near freezing to death, the tickle would all have been taken out of the performance. His professed plan was to reach under the overhanging banks or rocks, and trust to the acuteness of feeling in his fingers to locate the fish, as if any old, mature, experienced "roseate ranger of the rushing ripple" would calmly await the advance of that "strangely moving spectacle" from the outer world until it closed round him, and he awoke too late to the fact that he had been mightily tickled. Where is the man or men, reliable, with the papers in this case? I don't mean the professors, but witnesses competent to make affidavit. I will now wait, if necessary, three years more. O. O. S.

THE OZARKS, MO.

The gentleman who inquired the other day in your columns whether it is true that trout can be taken by the hand, may set his mind at rest on that point. They can. I first learned this fact from my father more than fifty years ago, and in North Britain the practice is called "guddling." Dr. William C. Prime, in a book called "The Old House by the River," published early in the fifties, says: "You may always take trout in this way." If further information on this subject is needed, let your correspondent ask Alex. Starbuck's "Ned" (Mr. P. E. Roach), whether he did not get into trouble with the authorities before he left England by experimenting in the capture of trout after this method. KELPIE.

CENTRAL LAKE, MICH.

He Growls to Sustain His Reputation.

Editor Forest and Stream:

This is a funny fight, and I feel very much as the Western woman did when her old man "fit the bar"—I don't care which whips. Rodster may be a very good word—like Sam Weller's "circumwent"—but I think angler just as good. Arguments are very good things when properly used, but they are sometimes wasted.

It is a well-known fact that a spider makes a web, but that doesn't make a webster of him.

Then, too, the farmers and some other fellows know that a rooster crows, and to keep in that line of argument he ought to be called a crowster. It may be that he is called a rooster because he roosts; but then consistency would say that a hen is as much of a rooster as her husband. Besides, I don't think it would sound well in certain cases. It won't do, and we may as well let him crow and scratch under his old name.

N. B.—This stuff is not argument, and as your space is too precious to waste, I'm going to stop—when I get through. A little thing like rodster is too small a bone to fight about; but certain words occasionally occur in the writings of even your contributors that are very afflictive to rational men—"of which I am one of 'em"—and I hereby give notice that if any rodster ever mentions "speckled beauties" in my presence I'll shoot him on the spot. As the editor of FOREST AND STREAM once insinuated in the "plain language of truthful James," that I was an old growler, I have a reputation to sustain.

There are many little things about FOREST AND STREAM that are not exactly to my taste, and if I were its manager I'd keep a hundred horse power press in the office and whenever anything was handed in that might be put in half the space, I'd give it a squeeze. Hunting and fishing stories, to be interesting, should be told in the most expressive language.

If my style were not already perfect, "Podgers" would be one of my models. By the way, what's the matter with "Podgers"? I believe he never was much of a gunster, but as a rodster he's at home, and whenever he goes on a fishing spree he always talks about it in an interesting way. Stir him up. DIDYMUS.

ST. AUGUSTINE, FLA.

Editor Forest and Stream:

The papers in defense of the use of the word rodster are scholarly, Shakespearian, and almost convincing; yet this at least I'm free to tell, I do not like thee rodster, well.

KELPIE.

## ON THE NORTH SHORE OF LAKE SUPERIOR.

(Continued from Page 516.)

It now being time to return we commenced the fatiguing tramp over the rugged route and were glad when we had reached the "big rocks." Ned had caught two indifferently sized trout during our absence, and being positive no more were to be had there, suggested an immediate move to our quarters. He laughed heartily when I told him, as we were slowly moving along, of my coasting down the rock on my back, and said it was a great pity to spoil such an incident without the consummation of the striking tableau so near at hand, the plunge into the lake. Its successful finale was all the tableau I desired. I was not hankering for the calcium lights to be turned on for rapturous applause or for the creating of any emotional impression.

On our return we met several canoes containing Indian families *en route* for the Aguawa, to which we gave the customary salute. It is really surprising how the redskins manage to employ the limited space in their *jimans*—so they call their canoes—and how much they stow away in them. We saw one containing man and wife with four children, two boys and two girls, a dog with four pups, divers camp utensils and other plunder, on top of which was a cage with two young eagles. The gunwale was but a few inches above the water, and with all this they had come all the way from Michipicoten. Their canoes are built exceedingly light and lie on the water

"Like a yellow leaf of autumn,  
Like a yellow water lily."

They are, too, very handy for crossing dangerous places, and, if you take proper precaution, you need not positively be upset. The Indians have extraordinary command over them, and they seem to fly over the surface of the water. Hence it is not surprising that the poets impart mysterious and magic powers to the bark canoe.

"And the forest life was in it,  
All its mystery and magic;  
All the lightness of the birch tree,  
All the toughness of the cedar,  
All the larch's supple sinews."

Even the Indians honor their own invention greatly, and impart to it a divine origin. They say that Menaboju (their Prometheus or Hercules) invented the canoe. They even point to some half dozen lumps of stone on the shore of one of the islands, and say that Menaboju built his canoe between them and there hung it to dry.

I was quite tired when we reached camp, for my walk along the ragged shore was very toilsome, being compelled to bend and twist, and turn and stretch in the endeavor to ascend or circumvent the deep chasms and treacherous masses of fallen rocks which ever and anon confronted me. Ned escaped all this fatigue, for he scarcely moved from his first position, and frequently did his casting from a comfortable seat.

We were now exceedingly eager for our meal, for our appetites were as keen as the edge of a sword blade. Our chef soon had us before smoking platters of broiled trout and other savory dishes which Appicus, the unexampled epicurean of ancient Rome, would have relished as choice examples of culinary skill.

The delicious repast over, we strolled, as usual, to the front of our quarters, which commanded a magnificent view of the lake and the mountains, and there became deeply entranced with the grand prospect spread before us. The sun was in deep repose in his rosy bed, a charming picture in matchless tints; the air sprang up cool and crisp, the sky became fretted with golden fire, a pale curl of a moon revealed itself, the sea beat in rippling cadences against the gray cliffs, and dark shadows from the mountain pines stood out like grim sentinels.

Night comes, world jeweled,  
The stars rush forth in myriads to wage  
War with the lines of darkness and the morn,  
Pale ghost of night, comes haunting the cold earth  
After the sun's red sea death quietless.

A cheerful camp-fire now being necessary for comfort it was soon made, and around it we all gathered and discussed the probabilities for the departure in the morning to the great trout waters at Point Brulé. Peter, who had been drawing much comfort from his clay pipe, at last laid it aside, and then taking up the theme we had just dropped fairly bewildered us with the recital of the most wonderful habitation of trout at the promised land. Sir Jack Falstaff, who related the amusing growth of the men in buckram, was no comparison to our Peter, for he would take a six-inch trout as a starting point and in an incredible short space of time so invest it with a fairy charm as to drop it at fifts. It was infinitely amusing to us, and to see to what extent his lively imagination would revel, we innocently, as it were, encouraged him in his romances. No ordinary fish liar could begin to approach him when he once warmed to the subject, and he was now giving us palpable evidence of being red hot. He was even dauntless enough to throw down the gauntlet to Ananias. Freckled patriarchs of gigantic size were marched before us in rank and file close and deep, until they took on such a marvelous growth as to astound us in the construction of the mythical. His trout tales at last reached such enormous proportions that I finally thought he had mistaken the nomenclature and was talking of the glittering tarpon.

The bronzed and ever-silent Kenosh, who had some regard for the truth, looked with wondering eyes at his associate during his enthusiastic recitals, until finally he had reached the giddy heights and was throwing out the fables of his illusive associate, who evidently believed that imaginative construction was simply "the truth in masquerade."

Ned, thinking it high time to drop the curtain ere Peter's trout outclassed the spouting whale, arose, and in the most artless manner asked the gilt-edged romancer: "Can you use the lariat?"

"Yes, a little; why?" answered the unsuspecting Peter. "We simply want some one to lasso your big trout, that's all."

And then Ned strode away, leaving the demoralized Peter all in a limp, who had suddenly realized that he was not only a "cheerful idiot," but that he stood branded as the champion liar of the North Shore. This is the second time this tawny half-breed had been knocked out by us, and we do not suppose that he will ever again

have the hardihood to enter the arena for another contest while he sails under our colors.

Early the next morning, Ned, our peep o' day boy, who was the first to see dawn, announced a beam wind, and then the entire camp arose and hurriedly prepared for the advance to Point Brulé. While the cook was preparing breakfast the tents were taken down and everything not in immediate use carried to the beach ready for loading.

Peter was not in his usual high spirits, now that we were to penetrate into his elaborately advertised domain where the monarchs of the spotted robes were supposed to sport in countless numbers. He well knew we had him down to a very fine point and that he now had no standing in court. Not a word did he murmur about trout; not a delight express in our departure; not a hopeful smile for our prospective success. He had been so completely stripped, so deftly exposed, so emphatically relegated to the rear, and so crestfallen, that he became an object of pity. He hung his head in very shame, and had he have been paid for his services would doubtless have deserted at the first opportune moment.

The meal over, the dishes washed, and the pots and pans thoroughly cleaned, we were soon loaded and off with a brisk wind that made the white swirl from the bow hiss and frolic in curving lines of glistening beauty. We were making fine headway and figured to reach our destination by noon. Blind River, with its ribbon-like wandering from dizzy heights, was soon reached and left in the distance. Swinging by a noble headland of precipitous cliffs we had Gravel River in view, and then we saw our friendly Kentuckian and one of his boatmen fishing along a shore of savage crags that were as sharp as a sabre's edge. We had supposed that he was on his way to Michipicoten, and wishing to make some inquiries held our boat to the shore till we were within talking distance of the twain. The angler doffed his hat to us, and as we bawled the interrogations he expressed by pantomime that he was unable to hear on account of the howling wind and the beating sea. The boys, however, made his tawny attendant understand, and the information came that there was no fishing at either Point Brulé or Gargantua.

This was a deep disappointment to us, and after an immediate conference of a few minutes concluded to return, stopping at Aguawa *en route*. Peter gathering renewed courage at this development, at once took a new and sudden tack, remarking:

"The infernal Indians have netted 'em all out; that's what's the matter. Three years ago when I was there, they were in acres."

"And every one a 6-pounder," put in Ned.

"Well, they were big ones, you bet."

"Very like a whale, Peter," I added.

"Monsters, every one of them," he came back unabashed.

It was no use to down this monumental liar unless we took a club to him, and that not then being conveniently at hand the Point Brulé romance was relegated to oblivion.

Our boat, having swung around, was headed to the deep water until she caught the full force of the wind, which was now blowing very brisk. Her speed was therefore doubly increased and a lovely sight it was to see her "walk the water like a thing of life" with the pearl-like foam rising in rolls from her round bow and streaming from her smooth sides until the frothy seas devoured them.

We had not gone many miles before the sun came out and flooded the earth with fervent rays; clouds ever in harmony with the ardent aurora appeared in prismatic radiance, while the cool wind bowing to the same influence rapidly relaxed to a gentle cadence. The cliffs in jeweled splendor take up the pæans of rejoicing and the woods in crimson burn, while the fast dying billows with silvery sparkle on every snowy crest rubbed the Aladdin lamp, for it was a morn of unalloyed delight, a romance from the sky that thrilled and gladdened the heart with overflowing joy:

"Ferry pastures, beetling rock,  
Slopes half-islanded by streams  
Glisten in the amber gleams  
Of the sunshine—gleams that mock  
Shadowed field and cool gray rock."

Our greyhound dash had very materially slackened in this golden dazzle, but the enjoyment was doubly enhanced by the blending of the azure sky and glittering sun, of mountain pinnacle and rugged crag, of shadowy wood and silvery sea.

Our boatmen were fully under the inspiration of this delightful weather, for they chattered like magpies in French and Chippewa and laughed so heartily as to lead us to believe they were having a regular circus at somebody's expense. Ned thought their battery of humor was aimed at us, but it mattered not, as we were willing to stand as targets as long as their facetious arms were concealed, as it developed a condition of cheerfulness they seldom displayed.

We sail along in dreamy indolence, the wind being just strong enough to fill out sails, while the air, like champagne, fills the senses with exhilarating delight. At twelve meridian we round into Aguawa Harbor, taking the inner channel between the islands, and as the last is reached we turn at right angles, going along a bold and frowning fortification of nature with a fast expiring breeze and a sea panting as if in sleep. An hour more of very slow sailing brings us to Aguawa River, where we land and make camp.

After we had taken a wholesome meal, Mr. Scheling, the Hudson Bay agent stationed here, who had arrived from Michipicoten the day before, paid us a visit for a grand pow-wow, as was his usual custom whenever we stopped here. He stated during the conversation that the great storm which occurred while we were at Jackson's Cove, mention of which I have made in previous pages, was one of the fiercest he ever witnessed, and that a thunderbolt struck with appalling violence in the lake at Pilot Harbor, and as a result thousands of fish were killed. Among them were all varieties, embracing many fine brook trout, whitefish, pike, herring and other edible fish. The seagulls in great numbers gathered from all quarters around the floating fish, but, strange to say, would not touch one of them, while a fish taken in a gill net and thrown to them would be snatched up instantly, a dozen or more making for it at the same time. This subtle discrimination was a mystery we were unable to solve, unless

it were that the lightning so poisoned the fish as to make them decidedly unpalatable to these scavengers of the lake.

About three o'clock, after everything had been made snug around camp, and an Indian boy engaged to keep away from our provisions the prowling dogs of which there were many here now, we took the boat and went up to the first rapids on the river. Here we landed, and walking along the shore fished the pools for a mile or more, resulting in our capturing a lot of small trout that ran from six to ten inches. They are really more toothsome than the larger ones, but the fighting sport, which so delights an angler, is not from this class of juveniles.

The sun had been exceedingly hot all the afternoon, and when we reached our tent were received by dense clouds of vampirish insects singing their direful war songs, that at once prompted a resort to the fly repellent. After liberally laving with it we had some comfort, for it was an unimpenetrable wall to the insectivorous brigades and a perfume to us the very opposite of fragrant muscadine. Ned's cuticle was easily assailable, and when the *brulots* had him at a disadvantage, he was a howling dervish. Lumps as big as acorns would appear on him from these attacks and they were also exceedingly painful.

In a very little while the acidulous emollient lost its power over this savage horde and then they were at us again as viciously as ever. Ned once more went for the insect preventive, but it was nowhere to be found. It had either been misplaced by him or by one of the half-breeds who occasionally used it. He was now in a perfect rage, for he could neither find the boatmen, who had doubtless gone to the beach or the woods, nor the desired liquid. As a *dernier ressort* he gathered some branches from the thickets and commenced a vigorous flagellation of the air, sweeping them down in brigades at every blow, but they were so thick everywhere that when he attacked them in front they took him in the rear, and when on one side they took him on the other. One minute he was scratching the back of his head and the next the front; then he would stoop down to scratch at a sand fly that was perforating his stocking, and then as suddenly straighten up to rub his caput, and thus stormed at every available point he became perfectly frantic. At last he rushed into the tent and then rushed out with blood in his eye and a gun in his hand. Is he resorting to shot and shell to decimate their ranks, or has he gone deaf and is about to look down the barrel of his gun for relief? I was really at a loss to comprehend his strange actions and at once began to move toward him to ascertain what it all meant, when with a gentle motion of his hand he waved me to stop. This puzzled me more than ever, but when I saw him deliberately raise the gun to his shoulder and aim at the top of an adjacent tree, the enigma was at once solved. It was game he was after, as an offset, doubtless, to the game that had been made of him. In a moment the report of the discharged gun rang out, and then a rapacious hawk came tumbling down from his lofty perch, much to the delight of Ned, who expressed himself a bitter foe to this sanguinary bandit of the fields. On replacing his gun he stumbled over the repellent, which was under an old straw hat of mine, and where he had placed it for security. He was once more serenely happy after he had anointed his face with the powerful preventive.

"Really, Ned," I said, as he emerged from the tent bottle in hand, "I thought you were about to escape from your tormentors by taking the direct route to cloud-land."

"I had pretty near reached that climax; but this," he smilingly continued, holding aloft the magic mixture, "saved me."

Supper was soon announced after this little episode and as the table was near the fire and smoke, where the tormentors never came, we ate in perfect peace, and as soon as we were through went down to the gravelly beach where the evening breeze from the lake kept the piratical pests away.

Here we were under the shadow of the Aguawa mountains, with the cool air rustling the leaves, the sea in delicious rhythm, and a sunset in a mantling sea of color and fire, with every ripple and wave in unsullied crimson and purple. The picture would not be complete without the silver-faced moon, but it duly came and lit up the towers and bastions of the ragged faced cliffs, filled the lake with shimmering spangles and made the forests and thickets, as their tops waved to the night breeze, a play ground of dancing shadows. It was an enchanting scene and only required the goblins, owls and elfish sprites to make it a fairy land complete.

Under all this spell of bewitching beauty we sat and planned for our return home, satisfied that the trouting along the coast and rivers *en route* was about "played out," and that to further seek the enticement of the golden fins would be without reward.

ALEX. STARBUCK.  
[TO BE CONTINUED.]

## NEWS FROM THE FISHING WATERS.

UPPER CHATEAUGAY LAKE.—Mr. R. M. Shults, of the Indian Point House at Merrill, N. Y., reports under date June 13: "I went fishing yesterday afternoon and caught nine speckled trout, four of which weighed 3lbs. 2oz., the largest one weighing 1lb. 6oz. I fished two hours this afternoon; caught 32 trout with fly; the largest weighed 3lbs. Trout fishing has been very good this season. D. W. Curtis, of Syracuse, carried away 30lbs. Saturday; he caught about 50lbs. while here."

THOUSAND ISLAND PARK, N. Y., June 11.—Mr. H. W. Berlin, of New York, stopping at the Westminster Hotel, Alexandria Bay, caught in the bay opposite a 23½-pound muscallonge on a 10-ounce rod and silk line, with small hook and light leader. He was just one hour and twenty-five minutes landing him. On the same day Messrs. H. H. Arthur, J. W. Arthur and B. F. Dos Passos, of New York, caught 54 large black bass. The fish were expressed to New York to be distributed among their friends. This whole party are stopping at the Hotel Westminster, Westminster Park, Thousand Islands.

KEARNEYVILLE, W. Va., June 15.—The black bass fishing in the Potomac at this point is just now very good, and many fine strings have been taken. W. H. K.

CLAYTON, Thousand Islands, N. Y., June 13.—The bass season here has opened well. The indications are that fish are very plentiful. The good work performed by the

Anglers' Association is now showing splendid results. Up to this week the weather has been scarcely propitious for large scores; but now everything is promising for good catches. Among the arrivals at the Hubbard House this week are Mr. and Mrs. Wm. Bunker, of New York, who between them, with Steve Leyare as oarsman, caught 84 fine bass on Monday and 31 on Tuesday, Mr. Bunker taking the honors. Also Mr. and Mrs. Richard King, of New York, with Frank Fronkier rowing, who on Tuesday made a showing of 32 good-sized bass. J. G. F.

TUCKERTON, N. J., June 15.—Weakfish are biting well in Tuckerton Bay now. Parties who went out very recently pulled in as high as ninety-four some of them. Fishing very good. GEO. O. ADAMS.

TOLEDO, O., June 15.—Both the Brooks and the Visitor, the American steam yachts captured off Pelee Island by the Canadian cutter Petrel, on the 8th ult., have been released on bond, and have returned to Put-in-Bay. JAY BEEBE.

A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (price \$5)—a \$9 value for \$5. This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

Fishculture and Fish Protection.

Relations of the Community to the Fisheries.

BY MARSHALL McDONALD, U. S. FISH COMMISSIONER.

[A paper read before the American Fisheries Society, 1894.]

[Concluded from page 516.]

I hold in my hand a table giving the comparative summary of the fisheries of the entire United States for the years 1880 and 1892:

NEW ENGLAND STATES.		MIDDLE ATLANTIC STATES.		SOUTH ATLANTIC STATES.		GULF STATES.		PACIFIC STATES.		GREAT LAKES REGION.	
Persons employed.	Capital invested.	Value of products.	Persons employed.	Capital invested.	Value of products.	Persons employed.	Capital invested.	Value of products.	Persons employed.	Capital invested.	Value of products.
1880.	1892.*	1880.	1892.	1880.	1892.	1880.	1892.	1880.	1892.	1880.	1892.
37,043	87,025	19,937,607	19,859,508	12,500,071	12,445,569						
56,853	90,685	12,685,331	19,405,151	16,360,517	10,047,580						
7,546	16,138	695,160	1,638,076	1,256,578	1,589,894						
5,131	12,010	545,584	2,998,080	1,227,544	2,409,595						
10,803	16,771	2,748,383	8,873,813	5,545,588	7,268,925						
5,050	9,788	1,345,975	5,478,080	1,784,050	2,471,355						
131,426	182,376	37,958,040	58,242,708	38,683,348	45,312,818						

This table is taken from a report on the statistics of the fisheries of the United States, prepared in the Division of Fisheries of the United States Fish Commission, and based upon field investigations conducted by the employees of the Commission, in part under the direction of Mr. J. W. Collins when assistant in charge of the Division of Fisheries of the Commission and in part by his successor, Mr. H. M. Smith, now in charge of that work. The data are taken in large part from the books of the fishermen. They have been collated with care and judgment, and may be relied upon to furnish as accurate a statistical presentation of the conditions of the fisheries as can be obtained with the means and resources at the command of the Fish Commission.

By reference to this table you will find that in 1892 the number of persons employed in all branches of the fisheries and related industries in all parts of the United States has increased 38.77 per cent., as compared with the number employed in 1880. The capital invested has increased 53.43 per cent., while the total value of the products of the fisheries has increased but 17.14 per cent. This indicates in a general way that the fisheries in 1892, taken as a whole, have not been so productive in proportion to the number of persons employed and capital invested as they were in 1880. We are, however, liable to err if we attempt to apply this general conclusion to the case of any particular fishery, though the general fact is broadly emphasized that our fisheries do not now yield the profitable return to individuals and to investments that they did in 1880.

Referring to this same table and considering the statistics of the fisheries by geographical divisions, we find that the fisheries of the New England States as a whole are practically unchanged since 1880. The number of persons employed is slightly less, the capital has been reduced less than one-half of one per cent., while the value of the products has increased one-half of one per cent.

For the Middle Atlantic States we find the number of persons employed has increased 51 per cent., the capital invested 53 per cent., while the increased value of the products is only 16½ per cent. For the South Atlantic States the number of persons employed has more than doubled, being 113 per cent., the capital invested has increased 14 per cent., while the value of the products rises to a little above 26 per cent.

In the Gulf States the percentage of increase in persons employed is 137.95, the capital invested 82, and the increased value of the products 103.

In the Pacific States the number of persons employed is about the same as in 1880, the investment of capital has more than doubled, while the aggregate increase in value of products amounts to 30 per cent.

In the Great Lakes States the percentage of increase in persons employed is 92.63, of capital invested 232.7, the increased value of the products rising only to 35.52 per cent.

The figures for the Great Lakes are very significant. With nearly double the number of persons employed in the fisheries, and with upward of 50 per cent. increase in the capital invested, there is but 17 per cent. increase in the total value of the product. This comparison is more significant when we consider that the increased production has been brought about by the utilization for market supply of species of fish such as the herring and others which constitute but an insignificant portion of the total products of 1880. The most important fishery of 1892—that of the whitefish—has vastly deteriorated, the take in 1892 being considerably less than one-half of the catch of 1880. And this result has arrived in spite of the fact that artificial propagation of the whitefish has been carried on on a stupendous scale by the different State Commissions and by the United States Commission on all of the Great Lakes. This deterioration in the number of whitefish is clearly to be attributed to the methods em-

ployed, and the necessity of some restraint upon these methods is imperatively indicated, not only in the general interest of the consumer, but in the interest of the fisheries themselves.

I would now call your attention to a table of the comparative statistics of the catch of certain species of fish in 1880 and 1892, taken from the same report:

COMPARATIVE STATISTICS OF THE CATCH OF CERTAIN PRODUCTS IN 1880 AND 1892.

1880.		1892.		Increase or decrease	
Pounds.	Value.	Pounds.	Value.	Pounds.	Value.
Alewives 45,684,333	826,546	59,176,183	554,740-13,491,550	+23,194	
Bluefish 14,707,708	369,758	15,957,831	637,305-1,250,123	+270,544	
Cod 119,137,400	3,475,105	92,648,311	2,996,691-26,493,539	-478,415	
Lobsters 20,238,683	631,769	23,301,149	1,050,877-3,082,466	+418,908	
Mackerel 73,317,563	1,883,910	17,041,736	1,102,651-56,275,827	-761,259	
Mullet 6,701,950	225,009	21,214,840	387,916-14,512,890	+169,907	
Salmon 51,633,824	1,086,339	93,826,527	3,730,416-42,192,703	+2,644,077	
Sea bass 2,642,650	113,176	8,401,563	355,602-5,758,903	+242,426	
Span Mac. 1,887,423	131,639	1,773,081	129,259-114,343	-2,380	
Sq teague 5,463,500	487,022	22,940,493	708,530-6,870,973	+271,508	

In this table we have arranged by sections the statistics of a number of economic species which furnish the basis of important fisheries. We will take first the alewives or river herring, instituting always comparisons between 1880 and 1892. We find for this species an increased product of 59,000,000lbs. And referring the increase and decrease to the different geographical sections in which the fishery is prosecuted, we find the increase wholly in the Middle and South Atlantic States, the New England product having fallen off about 2,500,000lbs. It would appear, therefore, that so far as this fishery is concerned the methods of fishing have had no influence upon the product, and that therefore no restrictions are necessary in regard to this species. As a matter of fact the capture of the herring is made largely in pound-nets and in seines. When the fish are taken in the pounds many of them, both males and females, are ripe, and crowded together as they are, involuntary reproduction is accomplished, since the squeezing and crowding of the multitude in the net accomplish precisely the same process that we do in artificial propagation. The eggs under these conditions are fertilized in vast numbers—being adhesive and floating off with the tide, they attach themselves not only to the walls of the net, but to every available object in the tideway—and for this reason I am inclined to think that so far as the alewives are concerned the pound-net fishing, instead of working any disadvantage, is actually improving the condition of this fishery all the time.

The next species in order is the bluefish. The census of 1880 gives the total catch of this species for the entire coast at 14,707,000lbs. The catch of 1892 reaches nearly 16,000,000, being 1,250,000lbs. in excess of the catch of 1880. Considering the data by geographical sections we find that the decrease in this species in the New England States since 1880 has amounted to 4,229,000lbs. The largest increase of 4,321,000lbs. is in the Middle Atlantic States. The increase for the South Atlantic States is 602,000lbs., for the Gulf States 545,000lbs., this being a new fishery for that section. Whether the vast increase in the New England States is to be attributed to the methods employed there, or is the result of the larger and growing catch in the Middle and South Atlantic States, is a matter about which we cannot at present form a conclusive opinion.

The cod fishery is prosecuted mainly in the New England and Middle Atlantic States; there being, however, an important and growing fishery in the North Pacific. Considering the fishery as a whole, we find a falling off of 26,500,000lbs. in product as compared with 1880, the decline being the largest in the New England States.

It is to be noted in connection with this fishery that the species is taken almost entirely, if not entirely, by hook and line, and the greater proportion in off shore waters. The deterioration cannot, therefore, in this case be attributed to any of the different forms of apparatus that are used in our coast waters.

In the case of the lobsters we find an increase of 3,000,000 pounds in the product of 1892 as compared with 1880, which is to be attributed probably in part to the stringent laws regulating this fishery which are now in operation, and in part to the great increase in the number of persons employed in the fishery.

The mackerel is another important fishery to which I wish to call your attention. We find a decrease in this fishery in 1892 as compared with 1880 of 56,275,000 pounds. The great fluctuations in this fishery from year to year are inexplicable at the present time. In the absence of specific knowledge as to the spawning grounds of the mackerel and the conditions under which spawning takes place, we are not prepared to attribute any influence to methods as now pursued in affecting the results of the fisheries.

The mullet fishery, which is more important in the South Atlantic and Gulf States, shows an increase of 14,000,000 pounds in 1892 as compared with 1880. This increase, however, has no significance as bearing upon the question of regulation, from the fact that it has arisen by the development of new grounds in the South Atlantic and Gulf States, and by more active fishing in the Middle Atlantic States.

The salmon, you know, is one of the most important economic species of the West coast. We find in this case an increased production in 1892 of 3,730,000 pounds as compared with 1880. This certainly furnishes no argument in favor of unrestrained fishing so far as it relates to this species. The increase is due entirely to the development of new grounds, and has been accompanied by an alarming decrease in those rivers which in 1880 furnished a large part of the salmon for market. I refer particularly to the Sacramento and the Columbia rivers, where there has been a marked deterioration in the fisheries, clearly the result of the fishing operations.

The sea bass, or blackfish of New Jersey, shows an increased production of 5,758,000lbs., which is pretty equally distributed to the three geographical sections of the Atlantic seaboard. There is no decrease indicated anywhere in either the New England, the Middle or the South Atlantic States.

The Spanish mackerel is an important economic species, the greater supplies of which during 1880 were drawn from the Chesapeake region. Since that time the fisheries have been extended and largely developed in the South Atlantic and Gulf States. In spite of the diminished production of 14,000lbs. in 1892 as compared with 1880. The production of the Middle Atlantic States having fallen from 1,852,000lbs. to 976,000lbs. This fishery, I think, furnishes a marked example of the detrimental influence that unrestrained pound net fishing may exercise upon a coast species. The larger proportion of the catch of Spanish mackerel in the Middle Atlantic States is in the Chesapeake Bay by pound nets on the eastern and western shores. The mackerel enters the bay to spawn; the pound nets are set in the track of the run; the fish taken are nearly all spawning fish; and the disposition of the apparatus of capture is such as to intercept them almost entirely in their approach to waters in which to spawn. In this way the great deterioration in the mackerel fishery of the Chesapeake is clearly to be attributed to the pound net fishing. This species, however, furnishes a clear and well defined instance of deterioration which we can fairly attribute to the operations of the fishermen.

The last species to which I wish to call your attention is the squeteague. We find for this species an increase of 6,876,000lbs. as compared with 1880; the increase being general for all the geographical sections in which the fisheries are prosecuted.

In considering the question which I have brought to your attention in this paper, it will be interesting to note the

advance of public sentiment in Great Britain as to the necessity of protection to the sea fisheries in territorial waters, since the publication of the report of the Trawling Commission of 1883, of which Professor Huxley was president. At that time there was little or no knowledge of the life history or the spawning habits of the different species which were the object of the commercial fisheries. There were no statistics upon which to build satisfactory conclusions. The Commission was forced to rely entirely upon the conflicting testimony of those engaged in the fishing interests. In speaking of the perplexities and embarrassments as to the conclusions to be drawn from the conflicting testimony of the fishermen, the Commission states as follows:

"Fishermen as a class are exceedingly unobservant of anything about fish which is not absolutely forced upon them by their daily avocations, and they are consequently not only prone to adopt every belief which seems to tell in their own favor, but they are disposed to deprecate a comparison of the present with the past. Nor in certain localities do they lack the additional temptation to make the worst of the present, offered by the hope that strong statements may lead the State to interfere in their favor with dangerous competitors."

The general conclusion of the Commission, upon which the advocates of free fishing in this country base their protests against any interference whatever, by the State in controlling their operations is as follows:

"I. We advise that all Acts of Parliament which profess to regulate, or restrict, the modes of fishing pursued in the open sea be repealed, and that unrestricted freedom of fishing be permitted hereafter.

"II. With respect to inshore fishing; although the evidence, so far as it is conclusive, appears to us to prove that the taking of small and immature fish has not yet produced any injurious effect upon the fisheries; it is undoubtedly possible, that by the use of improved engines, the destruction of fry might reach such a pitch, as to bear a large, instead of, as at present, an insignificant ratio of the destruction effected by the natural enemies of fish, and by conditions unfavorable to their existence.

"The existence of such a state of things, however, could only be determined by the examination of trustworthy statistics of the fisheries in question, extending over a considerable number of years. Should it ever be satisfactorily proved to have arisen, we conceive that the best remedial measure would be to place a restriction upon the size of the fish permitted to be brought ashore, and subject the possessor of fish below a certain specified size, to penalties, but to avoid interfering with the implements of fishermen, or with their methods of fishing.

"For the present we advise that all acts of Parliament which profess to regulate or restrict the methods of fishing pursued inshore be repealed, with the exceptions, purely on grounds of police, of the local act regulating pilchard fishing at St. Ives, and for that part of Loch Fyne which lies above Otter Spit, of the act prohibiting trawling for herrings in Scotland."

In 1878, fifteen years after the investigation by Professor Huxley and his associates, a second commission was appointed to inquire into (1) the use of the trawl net and the beam trawl in the English seas, and the territorial waters of England and Wales; (2) the use of the seine nets and the ground seine of the coast of Cornwall and elsewhere, and (3) into the alleged destruction of fry and spawn of sea fish in estuaries of rivers and bays by the above and other modes of fishing. This Commission, of which Mr. Frank Buckland was chairman, reached the same general conclusion in regard to the decrease in the supply of fish arising by means of fishing operations as did the previous Commission of 1863. They, however, took strong grounds for establishing legislative restrictions for fixed engines, under which title is included the different pounds, weirs, traps and stake nets, which are in common use on our own shores. The views of the Commission in reference to this matter are of sufficient importance to warrant their quotation in full:

Legislative Regulations for Fixed Engines.

"So far as the fish themselves are concerned, it is not a matter of much importance whether they are taken by a fixed engine or by a movable net. Provided that the use of these engines is not injurious to the fishing, they ought apparently to stand or fall together; and we are inclined, in fact, to arrive at this conclusion with respect to all those engines which are either temporarily fixed to the soil, or which are merely attached, like the stow net, to an anchored boat. But, as we have already stated, there is another kind of fixed engine, permanently attached to the soil, which seems to us to require much more serious consideration.

"From a fishery point of view there is this difference between a fixed engine and a movable net. The fixed engine is always on the spot. It regularly works with every tide, requiring no rest and keeping no Sabbath. The movable net, on the contrary, can only be worked by the active labor of the fisherman. Its use, therefore, is intermittent, and its destructiveness limited. It is obvious that an engine that is at work with every tide must, or certainly may, catch more fish than a net whose use is limited to the capacity of the fishermen for endurance. The fixed engine, moreover, covers more ground than the movable engine. The fixed engines in Swansea Bay reach across the greater portion of the Bay. They frequently overlap each other. They do not, therefore, like the movable net, take only a proportion of the fish, but they do, or may, take all the fish passing up into that portion of the Bay.

"The names which fixed engines bear sufficiently indicate their antiquity. 'Weirs,' 'garths,' 'goyads,' 'baulks,' 'hanes,' 'butts,' and 'kettle nets,' are corruptions of Saxon, Celtic and Norman words, and have been handed down by successive generations of fishermen from their Saxon, Celtic and Norman ancestors. But, though the engines are certainly old, their use has never been tolerated. Their erection, except on the sea coast, was reprobated in Magna Charta; they have been prohibited by many succeeding statutes; and fixed engines may be said to exist, not by virtue of the law, but in defiance of law.

"There were two reasons which the Legislature constantly gave in the olden time for putting down these engines. In the first place, they interfered with the navigation; in the next place they gave one fisherman a monopoly of the fishery which was nominally open to all the King's subjects. Fixed engines were, in short, in the first instance, an encroachment on the public rights. Time has in most cases now given their owners a prescriptive right in their use. But the engines were originally an encroachment on the rights of others. The man who erected a fixed engine usually placed it on his own shore. He was usually possessed, therefore, of the soil on which the engine stood. But this is not always the case; the kettle nets in Rye Bay, and we believe many of the hose nets in Bridgewater Bay, are fixed on the property of the Crown; and the same thing is probably true of other fixed engines.

"We understand that in Rye Bay and on the Sussex coast, the Board of Trade, acting on the instigation of the Admiralty, have positively refused to allow the erection of any new fixed nets, or to permit the present nets to remain beyond the lifetime of their present possessors. We see no reason why the same rule should not be applied to all fixed engines, wherever situated, standing on the property of the Crown. It would perhaps be unjust to apply the same rule to fixed engines on private property. Property acquired by prescription has a prescriptive right to exist; even in this case we think that there would be no hardship in compelling the proprietor of a fixed engine to state the nature of the engines which he considered he was entitled to use, and to allow him thenceforward only to use such as had been actually worked during some time in the previous ten years."

\*This year is placed at the head of the columns because it is the most recent one to which the statistics relate, and the one to which most of the figures apply. The data for the New England, Middle Atlantic and Pacific States are for that year; those for the South Atlantic States are for 1891, and those for the Gulf region and Great Lakes are for 1890.

The conclusion of the Commission in regard to these forms of apparatus is stated as follows:

- "1. That fixed engines confer a monopoly upon particular fishermen, which is opposed to the ordinary principles of legislation.
- "2. That those fixed engines which are erected on foreshore, the property of the Crown, should be abolished on the termination of the existing leases or lives on which they are held.
- "3. That no new fixed engine should be erected on either public or private property."

Passing now to the Trawling Commission of 1885 which pursued the same line of inquiry as the previous Commission already alluded to, we find the following conclusions and recommendations based upon the results of their labors:

#### Summary of Conclusions.

- "I. In territorial waters from the Moray Firth to Grimsby—(a) A falling off of flat fish. (b) A decrease of haddock in certain places.
- "II. In off-shore waters—No decrease in the total take of fish in the North Sea, except in the case of soles.
- "III. The beam trawl is not destructive to cod or haddock. There is no proof of injury to the spawn of herrings or other edible fish.
- "IV. There is no wasteful or unnecessary destruction of immature food fishes by the beam trawl.
- "V. The number of fish on particular grounds, especially in narrow waters, may be sensibly diminished by the use of the beam trawl.
- "VI. The injury done by the beam trawl to the food of fish is insignificant.
- "VII. It has not been proved that the use of the beam trawl is the sole cause of the diminution of fish in territorial waters.
- "VIII. In the absence of a proper system of fishery statistics and scientific observations, it is impossible to discover the causes or measure the fluctuations of the fisheries.
- "IX. Much avoidable damage has been done to drift nets and haddock lines, particularly by steam trawlers.
- "X. Peculiar difficulties attend the recovery by fishermen of compensation under the Sea Fisheries Act, or of civil damages.

#### Recommendations.

"In consequence of these conclusions and of other facts brought before us in the course of our inquiry, we submit the following recommendations to Your Majesty:

- "I. That a central authority be created to supervise and control the fisheries of Great Britain, if not of the United Kingdom, and that a sum of money be annually granted to such authority for the purpose of conducting scientific experiments and for collecting fishery statistics.
- "II. That in the meantime powers be given to the Scotch Fishery Board similar to those of the Irish Board, enabling them to make by-laws for the regulation or suspension of beam trawling, or of any other mode of fishing within territorial waters; and that a sum of money be granted annually by the Treasury for the purpose mentioned in the last paragraph.
- "III. That a similar authority with similar powers be created for England, and that in the meantime those powers be conferred upon the Secretary of State or president of the Board of Trade.
- "IV. That statutory powers and means be given to the fishery authorities to enable them to collect adequate statistics.
- "V. That the cruisers serving under the Scotch Fishery Board, whether employed for police or scientific purposes, be replaced by efficient steam vessels.
- "VI. That steam trawlers, besides having their number and letters painted on the bow, should also have them painted on the quarter."

Considering this most recent report, it is evident that public sentiment in England, so far as it is expressed in the report of the Trawling Commission of 1885, is far in advance of public sentiment in this country in regard to the same subject.

In conclusion, I desire to say, that in the discussion of this subject, I have aimed to avoid questions or occasions of controversy. I have sought to lay down the fundamental principles upon which it will be necessary to construct such legislation as may be found requisite to remedy actual or prevent impending decrease in our fish supply. No one will dispute the power of the State, having in view the general interest, to prescribe such regulations as may be found expedient. It will be equally conceded that such power should be exercised with the utmost conservatism, and with due regard to the important interests concerned. It will not be denied, I presume, that the effect of unrestrained fishing in our rivers is to reduce supply, which it is necessary to compensate for, either by artificial propagation or by restrictions in the fishing, or presumably, both combined. This necessity arises from the fact that it is possible in our rivers to intercept or obstruct the fish on their way to their spawning grounds. The further conclusion must be drawn that wherever, in reference to our coast fishes, it can be shown that the methods and locations of the fisheries are such as to obstruct or materially impede access to their spawning grounds, the same results must inevitably happen in reference to these that we have already found to take place in the case of our river species.

The broad fact I wish to impress upon this audience and upon the fishing interests is this: That the interest of the community is in maintenance of supply, and the interests of the fisheries cannot in any measure be separated from the general interest. Whatever measures are required to increase or maintain production, are as clearly in the interest of the fishermen themselves as in that of the community of which they constitute a part.

M. McDONALD.

#### A Threatening that Reacted.

THE Auburn, N. Y., *Advertiser* reports: J. Conatt, the man who threatened State Game Protector Carr's life at the head of Cayuga Lake recently, was sentenced Thursday at Ithaca by Judge Almy to one year in the Onondaga county penitentiary and to pay a fine of \$100. The lawless fishermen of this region who are preparing to threaten the lives of the game protector and his deputies should beware and not threaten Carr nor be tried by the district attorney of Tompkins county, nor appear before Judge Almy, for it means something if they do. Deputy Fenny Helmer of Montezuma has lately relieved the river of eight nets. Carr has lately collected fines of parties in Genoa for killing rabbits after the law had expired. He also collected fines of parties in Ithaca on the same complaint. The Scots caught twenty-nine lake trout from Owasco Lake Thursday and threw back fifteen because they were too small. That's very commendable. Perch and bass are beginning to bite at various fishing grounds owing to the warming up of the waters of the lakes and rivers.

## The Kennel.

### The Dams of English Setters.

BY P. H. BRYSON.

THE dams being more numerous than the sires, we cannot do justice to all in this article. We consider that Gladstone, Druid-Ruby and Count Noble, as a rule, furnish the blood of the winning dams. Gladstone's daughters are superior to his sons in producing winners. It can be truly said, his daughters are the mothers in Israel of field trial winners, the great majority having passed to the happy hunting grounds. Few dams breed on unless rich in his blood. He was the sire of Peep o' Day, the dam of Carrie J. and Gath, the latter the sire of Gath's Hope and Gath's Mark, who have a double cross of Gladstone in them, through their dam, Gem, Gath's Hope siring Bessie Shoupe, who gets another cross of Gladstone through her dam. He was the sire of Twin Maude, the dam of Roderigo, that breeds on with another infusion of Gladstone blood, through his daughter, Bo-Peep, the dam of Orlando, Antonio, etc. He was the sire of Lillian, the dam of Toledo Blade, Joey B. etc., the best bitch I ever saw, though the public, judging by her public performances, may not think so. He was the sire of Gladstone's Girl, the dam of Rod's Sue and Dot Rogers. The sire of Fate Gladstone, the dam of Paxtang and also of Bo-Peep, the dam of Rowdy Rod, etc., and of Florence Gladstone, the dam of White B. and Rod's Whim. He is the sire of many other producing dams. The Gladstone blood is the most potent of any to breed on through the dam. Few winners are now without his blood, and each year we find them getting less.

Count Noble's sons on the other hand are superior to his daughters and furnish more winning sires than dams that breed on. Count is the sire of Bohemian Girl, the dam of Paul Bo; he is the sire of Katie Noble and some other producing dams. I stated in my article on sires, Count Gladstone IV., Eugene T., DeSoto and others bred as they could, but relied on to breed on when judiciously used—Gath and Roderigo furnishing the object lesson—they being almost the same blood as Gath and Roderigo. The Druid-Ruby blood ranking next to Gladstone in producing winning dams that breed on.

We find also that bitches of this blood are superior to the dogs. This blood, unless crossed with the Gladstone blood, is not so prolific in winning sires or dams, confirming what I have stated, that the Gladstone blood mixes well with almost any other blood.

The Druid-Ruby blood furnished Sue, the dam of Gladstone's Boy, the sire of Lora, Vanguard, etc.; Vanguard is the sire of Maiden Mine, Gleam's Plink, Gleam's Sport, who ought to breed on, if properly mated. They are the third generation and winners.

This blood furnished Juno A., the dam of Rowdy Rod and Nannie S., also Lavette, the dam of Paul Gladstone. It furnished Letta, the dam of Ollie S., the latter bearing a double cross of it through Paul Gladstone. Combined with the Gladstone's blood, it produced Gem, Lillian, Florence Gladstone, Fate Gladstone, Gladstone Girl and other producing dams. It will be seen the Druid-Ruby blood is a very important factor in breeding, when you want level heads and game finders. Combined with Gladstone it will be an important factor in the future, as we have reached that point in breeding for high-class dogs where we have many of too much nervous force. This blood is going to be the balance wheel that will enable others to breed on.

Roderigo, like his sire, Count Noble, has not produced near so many winning dams as winning sires. Rod's Sue, Betty S. and Dot Rogers are among his winners. They have so much nervous force, great care should be used in selecting a sire suitable for them.

It is claimed by some that the blood of Daisy F., the dam of Daisy Hope and Daisy Hunter, furnished the heaven that leavened the blood of Daisy Hunter, causing her to breed on. As Gath's Hope blood furnished more winners than the Daisy F. blood, without it, I am of the opinion it is more potent to breed on.

I showed in my article devoted to "Sires" that the successful sires, as a rule, were large dogs; the opposite is the case, as a rule, with the dams, though not so marked as with the sires.

I will give some illustrations of both small and large producing dams, and my readers can make their own deductions: Petrel, the dam of Gladstone, was a small bitch; so was Peep o' Day, the dam of Gath; Twin Maude, the dam of Roderigo; Sue, the dam of Gladstone's Boy, Lillian, etc.; Lillian, the dam of Toledo Blade, etc.; Bo-Peep, the dam of Antonio, Orlando, etc.; Florence Gladstone, the dam of Whyte B.; Belle of Hatchie, the dam of Bob Gates, Lady C., etc.; Juno A., the dam of Rowdy Rod, etc.; Dashing Novice, the dam of Sweetheart, etc.; Ruby's Girl, the dam of Count Gladstone IV.; Topsey Avert, the dam of Topsey's Rod and many other producing dams that were either small or of medium size. Gem, the dam of Gath, was a large bitch, so was Sanborn's Nellie, the dam of Prince Noble, and also Bohemian Girl, the dam of Paul Bo, and Belle Belton, the dam of King's Mark, was another large bitch.

Other large producing dams could be named, but I think the preponderance of producing dams is largely in favor of the small or medium dams. It may not be amiss to state that good results have been obtained by breeding large dams to small sires. I have space to cite only Gath to Gem, produced Gath's Hope and Gath's Mark; Paul Gladstone to Bohemian Girl, produced Paul Bo.

Small dogs often win the Derbys. I cannot recall where a small dog won the Aged Stake. It is the medium-sized dogs that train on after their Derby form.

#### "Moss-Back Robber" Rule and "High Class" Dogs.

##### Editor Forest and Stream:

In answer to Mr. C. E. Buckle allow me to say that each and every trial is simply a trial, and not a competition in which the number of points made by either dog will necessarily count in his favor. Each dog will be given a thorough test, both as to his finding and pointing qualities, even if the dog has to be worked alone to reach this result. Discretion is given the judges to run the dogs as often and in what order as they think best, until they are satisfied which are the best dogs. The rule requiring the first and second prize winners to run together before the decisions are announced is superfluous, as the decisions are usually arrived at before the two dogs are put down in this trial, and they are often taken up before the dogs have gone 100 yds.; this is done simply to conform to an unnecessary rule. Heretofore bitches in heat had no show whatever. How often, Mr. Editor, have you seen magnificent bitches denied the right of competing in trials simply because they were in heat, the owner or handler thus losing all of his time and money. At this club's trials at Grand Junction last February, Mr. Rose asked permission of his brother handlers to start Allene, she being in heat. She ran in company with Topsey's Rod and she caused him no bother, the judges placing him first in the stake.

Experience has proven to me that a bitch in heat is the one that is handicapped; the good dog pays attention to hunting game instead of trailing a bitch.

P. T. MADISON, Sec'y-Treas. U. S. F. T. Club.

INDIANAPOLIS, Ind., June 10.

##### Editor Forest and Stream:

In regard to bitches in heat I wish for one rule, whatever it be, and let it be adhered to.

I have had bitches in season and have had to wait for another year, but the larger kennels seem to have a special license to act as they please; their aim is to help the world, the flesh and the devil, and in helping the latter they incidentally help themselves. The kennel world is too full, and has always been so, of philanthropists, and when you denude these philanthropists of their feathers they have no more luster than the peacock who fell among jackdaws. I think the judges ought to be allowed to handle the dogs to suit themselves, whether dogs or bitches in the heat. Pay the judges and demand justice and have the same judges all around the circuit.

H. S. BEVAN.

SOMERVILLE, Tenn., June 9.

##### Editor Forest and Stream:

We think this a wise move on their part as it is a great injustice to an owner to go to the expense of training a bitch and then not be allowed to enter her.

I would therefore suggest the field trial clubs adopt the following rule, which I think would prove satisfactory to all and solve this much talked of trouble:

A bitch in season should take the place of a byedog should there be one in the first series; if not, then draw her to run against a bitch in first series and likewise in second and third if she shows sufficient merit to be taken into these series, and, finally, if she proves to be good enough to compete for first place and a dog should be her competitor, run them separately after taking into consideration their speed, style, range, bird sense and ability to handle game. Experienced judges could easily select the winner.

If allowed to compete on any other basis it would, in my opinion prove extremely hazardous and unsatisfactory.

A. M. YOUNG, Sec'y Manchester Kennel Co. (Lim.).

MANCHESTER, Tenn., June 14.

##### Editor Forest and Stream:

I have long thought that there ought to be some change made to protect bitches in season, as the old rule of forbidding their running is unjust, and has a tendency to keep back bitch entries.

It is just as reasonable to look for improvement to the English setter through our bitches as through the dogs, therefore they should be placed upon terms of equality.

I think it necessary, however, that some protection should be extended to the dog, in case the bitch should interfere with his chances through undue attraction. It would have been more to my mind had the matter been left discretionary to the judges, who could have then kept a dog that was interfered with from running with the bitch, until the last moment, at least; and were the objectionable rule, that provides that first and second prize winners must run together, eliminated, I think leaving the matter to the discretion of the judges without trying to control unknown issues by rules that will only complicate things, would always regulate these matters to the satisfaction of all concerned.

I might add, as a precedent, that Rowdy Rod and Daisy Hope ran their heat together in the four-hour race at the Central trials, when the bitch showed unmistakable signs of being in season.

Ightfield Rosalie ran through the Derby at the last Grand Junction trials in full season, and no one ever would have known it from any signs in the field.

Allene also ran in season, and that good little dog Topsy's Rod never paid the slightest attention to her, and I will add, that I never knew the bitch was in season until after the trials, neither did I know that Ightfield Rosalie was in season during the running.

As one of the judges, I would have noticed anything detrimental to any dog running, had the same happened, I am certain.

While I am not ready to assert that the great hunting desire is always developed to the extent that when hunting, a bitch in season will not be in the way of a dog, yet I have never seen a case where such was the result, though I have never made a practice of trying any experiments in this line.

I think the most satisfactory way to have settled the matter would have been to have left the matter to the discretion of the judges, and in cases where a bitch in season stood to win first or second, to have suspended the rule providing that first and second winners should run together, and as it is a useless provision the elimination altogether could do no harm.

W. W. TITUS.

##### Editor Forest and Stream:

I am most decidedly in favor of abolishing the old rule of prohibiting bitches in season from competing in our trials. Under the old field trial rules where the judges were simply machines to carry out the instructions of the club under which they were judging, there may have been some excuse for the rule, but with the rules as they are now constructed, there seems to be no reason whatever why bitches in season should not compete.

The views expressed by Mr. P. T. Madison on this subject, seem to me to cover the ground entirely. I fully agree with him in all that he says.

C. G. STODDARD.

DAYTON, Ohio, June 15.

## POINTS AND FLUSHES.

[By a Staff Correspondent.]

In a pleasant letter to me from the well known sportsman, Mr. Jos. H. Hunter, of Washington, D. C., he incidentally mentions doggy-matters and the pleasant days passed at Lexington, N. C., at the field trials, where his vivacity made him the life of the party. He writes: "I will be in the circuit with two strong dogs this fall—Hoosier Boy and his sister, Daisy H. II. He is going to make them all get up and go, and Count Gladstone could never cover any more ground than he can. By the way, little Daisy II is no plug."

By the way, I note that the field trial men have lost a deal of their erstwhile vivacity concerning sure winners. I have not heard of a sure enough Derby winner this year, and the spring time has about passed by. Such a state of affairs is without a precedent. Heretofore, at least, six or eight sure winners were openly announced, with many more which privately felt certain that it was merely a ceremonial to take the prize. Truly, the palmy days of the ante-contest winners have gone into the sere and yellow-leaf.

A surprising number of complaints have come to this office, in respect to unfair treatment to patrons by dog trainers. And one is the other way, namely, dishonest treatment of a trainer by a patron. It is a source of regret that such matters occur. There should be reasonable business precautions observed in the business transactions of dog matters as in every other business. Human nature is much the same everywhere and among every class, it is neither all good nor all bad.

In any event, the best way to settle differences in business when a settlement can not be reached by agreement, is to have the matter in dispute adjudicated by the proper court. Matters which appear sometimes as unfair from an *ex parte* statement, appear entirely different when both sides are heard, with the necessary legal proof.

Strikes, commonweals, riots and anarchy may prevail in the world at large, but harmony and good fellowship bloom perennial with the noble guild of sportsmen. B. WATERS.

## After Wildcats on a Creole Pony.

BURNSIDE, La.—*Editor Forest and Stream:* In the FOREST AND STREAM of March 24 I notice that you say, in answer to a correspondent, who asks you if the wildcats in Massachusetts could be hunted with hounds like a fox, that wildcats would tree. Down here in the swamps of Louisiana I don't find this to be the case, for, out of a dozen wildcats that we have killed this winter, only one took to a tree; and as this was at night, I imagined that the dogs must have surprised him at his supper, and that his only escape was up a tree. It may be that the wildcats which inhabit our woods and swamps are different from the wildcats of Massachusetts. I am only familiar with our wildcat.

The wildcats which we have down here are big, bobtail fellows with a mottled gray and black fur, and they are very long and slim-bodied. The last cat we killed measured 36in. from the tip of nose to the end of tail, and weighed about 25 lbs. I think that these cats are more than a match for one dog. Their array of teeth is quite formidable, and their claws are strong and sharp enough to make some pretty deep furrows in the hide of the first dogs that run into them, when brought to bay, while their ability to give a pack a fairly good race, in our thick southern swamps, is unquestionable.

If a man loves the music of the hounds, and a wild rough and tumble ride through the canebrakes on a wiry creole pony, let him come down here and join us in one of our exciting cat hunts next winter. At that season the big swamps are dry and free from snakes. The early mornings are frosty, and the canebrakes and brier patches along the edges of the swamps are full of wildcats, great big fellows, which, with the natural advantages which the wild cane and briars afford, give us a fine chase and a rough ride. Of course the riding would be slow to a man accustomed to an open country, and to a good hunter. But it is great sport, nevertheless, to a man who enjoys the pleasure to be gotten from hearing a pack of hounds in full cry. Then, too, there is the splendid exercise to be had from riding an excitable and fiery little pony through the thick brush, scrambling over canals and across bays full of mud of unknown depth; jumping logs, and rushing headlong into canebrakes which can only be gotten through by the main strength of the pony and by his general ability to kick and struggle through any sort of thicket or canebrake that you ride him into. And then, too, a friendly rivalry exists between the hunters as to who will get a shot at the wildcat as it runs ahead of the pack, which adds zest to the sport.

It is certainly rough sport, but all the better, I think, for its roughness. There is no artificiality about a cat hunt. It is better than our Maryland drag hunts, although the pace is not so fast, nor is the riding so exciting as in a chase after a bag, but for me there is more real sport in one of our wildcat hunts—though I do not intend to decry drag hunts, which afford so much pleasure to such numbers of men who have no other way of getting any sport.

This is my first season of wildcat hunting, although I have hunted deer for several winters in the swamps down here. We were driven to hunting cats by necessity, for the great overflows in the last two years, coupled with the indiscriminate chasing and shooting of deer, both in and out of season, have almost exterminated the deer in this section of Louisiana. We had to have some sort of sport, and we found cat hunting a great deal of fun. And our deer hunting will be improved in future if we leave off hunting them, for the deer are coming back to our swamps again, and in a few years we may have as many deer as we ever had, provided the swamps are not overflooded this summer.

At first our great trouble was to get hounds that would trail a cat, for our hounds were trained only on deer, and they would never notice a cat track. Finally we bought four hounds that had been used for hunting wildcats, and after a few chases under their leadership, we got our whole pack into cat hunting form.

We have had some glorious chases this past winter. Of course you will understand that in such thick cover the chase would not be so very fast. But still it is quite fast enough, and especially so when you happen to get your pony stuck fast in a tangle of vines, then the chase seems very fast, for the music of the pack seems to die away very quickly and it is soon lost to hearing. Our hunt lasts two or three hours, for the dogs often have to trail for a mile, before they jump the cat. Then follows a hot chase, which ends in the cat being shot, as he runs before the dogs, by some hard riding hunter; or else the pack runs him down and brings him to bay; then a lively scrimmage ensues, which ends in the death of poor puss and a few bites and scratches for his conquerors. When the cat is jumped, he generally makes a straight run for some favorite brier patch or thick canebrake. After dodging about in his favorite thicket for a while, and finding that the dogs continue the chase, he makes for another piece of cover; and keeps up these tactics of dodging from canebrake to canebrake and from brier patch to brier patch, until the chase ends as I have described. In the thickets he has some advantage over the hounds, for with his slim body he can slip along quickly through wild canes and briars, where the dogs can scarcely squeeze themselves through. But the scent is good, and once the cat is up and going before the pack, the chase is rarely ever broken by a check.

We have 18 hounds in all, old and young; but next season we hope to start our first cat with at least 25 fairly good hounds. Our hounds are black and tan in color, with very long drooping "ears that sweep away the morning dew." These dogs have splendid pluck and endurance, and I have never heard a more musical cry. To hear this pack of hounds in full cry after a deer or a wildcat, will make a man forget all his troubles. In the excitement of such a chase, we can only rejoice that we have the health and strength to enjoy the sport.

One day last January, after the tedious and weary season of sugar making was over, and we were free once more to shoot and hunt to our heart's content, we decided to open the next morning with a wildcat hunt. About 5 o'clock, Ory, my stableman, rapped on my door and told me that my pony was saddled and that Blount had the hounds ready. It did not take us very long to get into our hunting clothes and to drink a small cup of Creole coffee made by an old-time Creole cook. This is the sort of coffee that Millie made for Mr. Hough, when he was down in Opelousas last year. One tiny cup of this delicious black coffee is worth a dozen big cups of the slop that is called coffee in the North and West.

We were soon on our ponies. The moon was just going down, the stars were shining brightly, and a faint streak of red in the East heralded the coming day. A glorious white frost was glistening on the grass in the moonlight, and the air was cold and still, an ideal morning to listen to the music of the hounds. Our road to the swamps was across the plantations, a straight stretch for three miles. My pony, a small one, with a blaze face and a bobtail, was full of fire and excitement, and I was soon thoroughly warmed up by the efforts to restrain her wild desire to lead the cavalcade of ponies and the pack of dogs. When we reached the old fields in the rear of the plantations, the dogs scattered about and began to hunt in the patches of blackberry briars, and to sniff along the old dead logs covered with frost. It is in these old fields and brier patches that puss spends the night rambling about in search of rabbits and rats, which are its principal food.

We stopped and watched the hounds as they circled about the field. Presently old Vic, a black, white and tan hound, raised her old black muzzle, all scarred by numerous conflicts with wildcats, and a soft, mellow whimper floated on the air. She is one of the hounds we bought, and it was under her leadership mainly that we taught our pack to hunt cats. Scarcely had the sound of her first whimpering

cry died away before all the rest of the dogs came to her, and then all began to sniff about in the tall, frost-covered weeds. In a moment or two Ruler, a big, gaunt black and tan hound, opened on the trail, and his voice sounded deep and bell-like on the frosty atmosphere as he trotted forward on the trail with his tail carried well up in the air. There is no trail so cold that this old dog cannot puzzle it out; and he can carry a cold trail fast, too. But this time it needed no cold-trailer to work out the trail, and with a rush the pack was off. We trotted along behind them holding our excited ponies well in hand. The trail led into a thick canebrake. Suddenly there was a perfect crash of hound music and puss was up and going for dear life before the wild chorus of the excited pack.

Then every one had to look out for himself. It is the man that knows the swamp the best who hears and sees the most of the chase. The cat on this occasion took a straight line for a big brier patch in an old clearing about half a mile away from the place where we jumped him. He led the dogs through some very thick canebrakes, which hindered them a good deal, but which were almost impassable for the ponies, so that by the time we had struggled through some canebrakes and picked our way across a piece of boggy swamp full of big logs the pack of hounds were almost out of our hearing. But we could hear Blount's ringing cheers as he rode through the brush somewhere near the dogs. Blount knows the swamps by heart and he knows how to get around all the big canes and so keep near the dogs. Soon we heard the dogs coming in our direction, so we headed our ponies into a canebrake, and by good luck and much plunging and struggling on the part of the ponies, all the while, however, encouraged to do or die by the ever increasing music of the fast approaching pack, we got through; and as we struggled through the brake and came into the opening, the pack of yelping hounds crossed the clearing just ahead of us.

We dashed after them on our ponies, and with wild yells

AFTER THE RUN.

cheered them on. This unexpected noise was too much for the cat, so he bolted into the big brake through which we had just come, and attempted to leave it on the other side. But Blount, coming up on that side, headed him back. Soon all the hunters came up, and as they came in from every direction the brake was soon quite surrounded by men. Round and round the brake went the cat, and close behind him came the dogs, all scattered now; but each dog doing his best to force his way through the dense thicket of wire canes.

On the outside of the brake the men were whooping, yelling and laughing, as they madly raced their ponies around the edge of the canes, each man trying to get a glimpse of the cat, if by chance it should attempt to break out of the thicket. Back and forth, round and round went the cat, and all the while that glorious music was being poured into our ears. This way and that way the men were going on their ponies, both ponies and men now thoroughly spotted with mud, while the dead canes popped and cracked like firecrackers under the hoofs of the ponies. Every man was eager to get a shot and so to end the chase. Suddenly a piercing yell was heard, followed by a confusing sound of yelps, snarls and growls; and we knew then, that a glorious and exciting chase had ended in a victory for the hounds. Those of us who were nearest jumped from our ponies and made our way through the wired canes and briars to where we heard the snarling and growling pack. In a few moments we were at the spot and there we found that the dogs were holding poor dead puss off from the ground, and each dog tugging away fiercely. After all the dogs had had their fill of worrying the dead cat, the cat was tied on behind a saddle, the horn was blown and away we went home to a good hot breakfast.

I send you a very good photograph of a dead wildcat and some half-grown hound puppies. This was their first scent of the game. The photograph was taken by Mr. C. S. Mac Farland.

[The wildcat of Louisiana is a form of *Lynx rufus*, which is abundant all through the South.]

## Toronto Dog Show.

*Editor Forest and Stream:*

From present prospects the sixth annual bench show of the Toronto Industrial Exhibition Association, to be held at Toronto in September, promises to be one of the best ever held in the city. A large number of exhibitors from Canada and the United States have signified their intention of exhibiting. I am now busy compiling my premium lists and would request that all those intending to donate specials will communicate with me immediately, so that I can insert same into the lists. Have just about completed railway and express arrangements, which I expect to publish next week.

C. A. STONE, Sec'y-Supt. of Bench Show.

TORONTO, Can., June 13.

Mr. Noel Money has purchased from Mr. J. C. Johnson's kennel at Ludlow, England, the foxhound bitch Active. She came over in charge of Spratts Co., and is said to be heavy in whelp. She comes from a good country.

## DOG CHAT.

The Seminole Kennels' new place seems to be admirably adapted for the increased accommodations this well-known kennel now requires. In breeding and raising Irish setters and collies plenty of room and shade are indispensable. The kennels, which are situated at the Fairview Farm, Chestnut Hill, Pa., are now almost finished; they are set in an inclosure 250ft. square and surrounded by a high fence. This is divided into two sections, one for the Irish setters and the other for collies. Five houses on the southeast side are divided into stalls to accommodate four to six Irish setters and similar buildings are prepared for the collies on the southwest side of the inclosure. Excellent spring water is supplied by a windmill on the grounds. The cook house has been erected in the center of the grounds and this is fitted up with all the improvements necessary in a large and well regulated kennel. In this building is also a bath tub. Adjoining the main inclosure are two other buildings, which are reserved for pugs and the more celebrated collies of the kennel. Near the kennels and facing Mt. Airy avenue an office has been erected. With "Will" Connors at the wheel, assisted by Edward Woodley, Seminole Kennels expect to take a still higher and more important position in kenneldom than they already have attained.

Mr. James L. Little, of Brookline, Mass., whose kennel of Scottish terriers promises to be a healthy competitor of the now *facile princeps* Wankie Kennels, has made a good move in securing a well known young dog, Bellingham Bailiff, from Mr. C. H. Wood, of Newport, Monmouthshire, Eng. This dog is but two years old, but his firsts at such shows as Darlington, Berwick and Bath among several others, proclaim his worth. He is said to have a capital head and coat and great bone and terrier character. He is by Whinstone out of Glentil, which shows that with such blood in his veins he should be very valuable for stud purposes.

Mr. Chas. E. Bunn, the well known mastiff breeder of Peoria, Ill., has just completed a new kennel building which, from the plans he has sent us, seems to be a very practical one. The building is set on top of a hill in the midst of thirty acres of grass. Under the main roof, which is amply supplied with light and ventilation, is a passageway 10ft. wide, at each side of which are fifteen stalls, each 6x8ft. and covered by an inside roof, thus assuring cool, comfortable kennels for the dogs. There is also a cook room 20x20ft. and an office 16x20ft. In front of the stalls, facing the inside driveway or passage, are wire partitions, the partitions between stalls being solid. There is a window in each stall and the doors open on the outside of the building into separate yards. Mr. Bunn has reduced his kennel and now has merely the stock he requires for breeding. He has now six bitches in whelp. He has also taken up another fancy—fox-terriers, or, as he puts it in his letter, "Am fooling a little with fox-terriers; have two pups I may surprise the boys with next spring."

The latest recruit to the ranks of the collie fancy is Mr. W. T. Ford, of Cohoes, N. Y. After Chicago show in March last, it will be remembered we mentioned the fact of his purchase from Messrs. McEwen & Gibson of the young black and white dog Scotsman, reserve at that show. This dog also won first and special at Detroit in 1893. Another stud dog is Laird by Metchley Wonder II out of Dawn. Owing to a misunderstanding with a mowing machine, in which he lost three hind toes, this dog has not faced a judge, though he is said to be a good one. Mr. Ford has selected several good brood bitches, and with evident forethought in regard to their breeding. He has Madge by Highlander ex Floss. She won as a puppy at Boston. Another is Christine by champion Christopher ex Jess. She was second in puppy class at Toronto in 1892. She now has a nice litter by Yardley Fox that was second to Setton Hero at Detroit this year. Helen Douglas is another well-bred matron. She is by Great Alne Douglas out of Wellesbourne Lady, and was also a winner in the puppy class at Boston. Mr. Ford has now about 17 collies in his new kennels, and has registered them as "Wilford" Kennels. He is a member of the Collie Club, an Associate of the A. K. C., and with these credentials we welcome him to the whirl of dogdom. He will begin the campaign at the Cranston, R. I., show.

The new advertisements that we call attention to this week are Seminole Kennels fine array of stud dogs, both collies, Irish setters and pugs, and Charles E. Bunn also has four mastiffs in the stud. Wilton Kennels offer for sale a well-bred fox-terrier bitch in whelp; Charles E. Bunn, two litters of fox-terriers; Edward Booth, two prize winning St. Bernards; J. H. Whistler, collie pups; Wheatley, Skye terrier pups; Box 43, St. Bernard dog. We also draw attention to the loss of John H. Steele's English setter.

The outlook for a busy field trial season this fall is not very promising judging by the Derby entry lists so far received. It is to be regretted that the Philadelphia Kennel Club is compelled to cancel its trials this year, the entry received for their Derby, while not large, is equal to that of the Eastern Field Trial Club. Field trials are more or less of a luxury to many owners of dogs, and luxuries are only enjoyed this year by the Senatorial drones. Next year the dogmen may get a chance.

The New England Kennel Club is considering a change in its constitution and by-laws, and to this end appointed a committee at the last monthly meeting.

The following notification of the latest move in the Mercer vs. Mills case for libel was sent to Dr. Mills by his counsel, Messrs. O'Garra, MacTavish & Gemmell: "Our counsel advised us of the judgment in this case, merely stating that the Common Pleas held that the question determined by the Chief Justice in your favor was one that, under the practice of our courts, should have been submitted to a jury, and that the Chief Justice erred in withdrawing it from the consideration of the jury." This does not settle the case by any means, and is not a judgment in favor of the plaintiff further than that the case must go to a jury. This, we understand, will be in September next.

Our smooth fox-terrier breeders have not been doing much importing lately, but we learn, *sub rosa*, that one of the principal kennels not a hundred miles from New York has given *carte blanche* for the purchase of two bitches and are nibbling at a crack young dog that came out this year on the other side. If successful these importations will serve to liven things up a bit at the fall shows.

John Armstrong, brother to "Bob," so well known in connection with Mr. Pierpont Morgan's kennels, now has charge of Mr. T. G. Davey's field dogs and will prepare them for the fall trials. Mr. Armstrong came to this country last winter with a good record as a trainer, and we trust he will meet with the success his knowledge and correct bearing entitle him to.

Mr. W. W. Titus expects to start for Dakota, July 1, with the dogs he has in training.

We are indebted to Dr. Lougest for a full report of the proceedings in the Fallon-Lougest (Beaufort's Prince) case. We have, however, already published the main

features of the case and space forbids its publication in full. One amusing feature seems to have been that the witnesses for the plaintiff swore they knew the dog because it licked the baby's face. Advocates of the mastiff as a family protector and home dog will aver that that is nothing but what every well-bred and well-behaved mastiff would do.

Rufford Ormonde won the grand challenge trophy at the Collie show, at the Aquarium, London, and thus becomes entitled to be called champion. *Stock-Keeper* plumps for him flat in the following terms: "Undoubtedly the best and most typical sheepdog living."

Seminole Kennels, with a view to encouraging the members of the Collie and Irish Setter clubs to breed to good stock and thereby increase the interest in club competitions at shows, announce, in our business columns, a considerable reduction in stud fees of their different dogs to members of these clubs. Times are hard and fees must be reduced all round, even in pugs, and this kennel puts their well-known stud dog *Attraction* at a fee certainly within the reach of any breeder. It will be remembered this little dog beat champion Brod Ivy at the last New York show.

The Mount Holly Fair show will be held this year Oct. 1 to 5, instead of as announced, Sept. 17 to 21.

#### The English Bulldog Club Show.

In an excellent report of this show by Vero Shaw in the *Stock-Keeper* we find much that will prove of interest to American breeders of the bulldog. It shows also the popularity of the breed, when, though clashing with the important Preston show, an entry of 217 was secured by the energetic secretary, Mr. Frank Crowther. This is within three of the record, and the entry of 36 in one class is something never approached before. The show was a sensational one in many respects. The president of the club, Mr. Berrie, was the judge, and he seems to have upset the popular verdict in more than one instance, notably in placing Guido over Dockleaf and then giving to Ruling Passion the pride of place as being the best in the show.

Another surprising act was his recognition of the Dudley-nosed Our Dick, of which we shall speak in proper order. The winner's class opened the ball and four faced the judge—Guido, King Orry, Aston Lion and Facey Romford, and as these dogs are so well known it may prove interesting to read Mr. Shaw's remarks on the judging: "To commence with, it may be at once said of Mr. Ellis's dog (Guido) that he has his faults just as every bulldog has had since the world began or the breed originated, assuming that the two events were not contemporary, as is darkly hinted at in certain quarters. Guido, moreover, labors under the misfortune of possessing two or three imperfections which are perceptible to the meanest comprehensions even at a distance, for he is a bit high on the leg, not big enough in his body and quite long enough in the back, though the latter fault would be materially neutralized if his middle piece were bigger. These undesirable properties have been made a good deal of—in fact the very most of—by detractors of the dog, who point them out with singular unanimity, but at the same time completely ignore his magnificent—I use the expression advisedly—head, grand neck and shoulders, excellent quarters, general bulldog character and activity."

King Orry, second, is described as a grand-skulled dog but too high on the leg, and also shows his lower tusks in an unsightly manner, and the critic does not like the black patches on his back. Aston Lion is a red dog, wanting in lay-back, "and here lies his greatest fault, though at the same time I think he was fortunate in getting placed over Facey Romford, a very short-faced, big-skulled, heavily-boned animal, but, unfortunately, decidedly narrow in the muzzle and too tapering in his skull, which, instead of presenting a square appearance, is much smaller in circumference behind the eyes than further back." Mr. Berrie judged these dogs by a point system of his own in which Guido scored one each for skull, eyes, ears, chest and neck, shoulders, forelegs, size, coat, tail and general appearance; total, 10. King Orry's superlative marks were in mouth, chop, face, stop, chest and neck, shoulders and coat; total, 7. Aston Lion excelled in three points—hind legs, coat and tail, while Facey Romford only secured one point, and that for body.

About the 35lbs. winners' class the critic says: "Champion Ruling Passion was all alone in her glory and, of course, won, but she has quite had her day and has become very gray about the muzzle. I always considered her short in skull from eye to ear; her ears are not a pair, one being almost a button; her forelegs are crooked, and she wants a deeper chest and proper wheel back. Consequently her defeat of Guido can only be regarded by me as an extraordinary mistake on the part of Mr. Berrie, for which I can see not the vestige of an excuse."

In the under 45lbs. class Dockleaf beat his only competitor, Don Selano, with the utmost ease. Mr. Shaw describes Dockleaf as simply grand in skull for his weight, and also in cushion and stop, but thinks he could be improved in lay-back. In body he is extremely good, except that he might be more tucked up about the loins; his bone is very heavy, his chest wide, while he is as sturdy, cloddy-built a specimen of the breed as could be desired—in fact, the best little one that has been seen for many and many a day.

Open dog classes were in many instances a repetition of the winners. In the under 45lbs. class Dockleaf scored again, beating Monkey Brand this time. This well known dog is described as big in skull, very heavy in chop, phenomenally wide in chest and extremely short in back, but his ears are coarse, his feet not good, while his stern and its setting on are not at all the thing. Champion Cigarette, winner in winners' and open classes under 35lbs., is described as a good one, not quite filled up as much under the eyes as might be desired, skull excellent, bone very heavy and a capital stamp all over.

The limit classes were well filled, but there does not seem to have been anything above the average. Novice dogs had an entry of 36, and a new one came out from all accounts seems to have a winning future. That is Dombola, a first-rate youngster of the Dockleaf type, with a grand skull and muzzle, a good body and plenty of timber, who, as Mr. Shaw remarks, should develop into a champion by and by. The second prize dog, Lord Harry, is also a real clincher, having a capital skull and excellent chop and under jaw.

About the Dudley in this class the critic says: "Our Dick is a Dudley-fronted one, but in head properties, chest and bone a real topper; the color of his nose, however, should have disqualified him under a club judge; and while upon the subject of the bilious-looking race, I must say that I was horrified by seeing a Dudley entered by Mr. Ross, a good made one of course—but then a Dudley!" This dog was given vhc. There was nothing out of the common in puppies.

Then after settling a few other unimportant classes, Dockleaf and Guido came together for the fifty-guinea challenge cup for dogs. There was a good deal of excitement round the ringside, for, though Dockleaf had beaten the bigger dog many a time before, there seemed to be a something in the air which proclaimed a coming sensation. The dogs were put on a table and scored again on Mr. Berrie's quaint score card. Neither dog behaved well, squatting and drooping their heads in silent protest to point judging even in this *fin de siècle* manner. The dogs were not required to move, a dereliction that seems to have surprised the cognoscenti almost more than the eventual verdict, which was in favor

of Guido by 11 points to 10, and in what particulars the following table will show:

	Guido.	Dockleaf.
Mouth.....	1	1
Chop.....	1	1
Face.....	1	1
Stop.....	1	1
Skull.....	1	1
Eyes.....	1	1
Ears.....	1	1
Chest and neck.....	1	1
Shoulders.....	1	1
Body.....	1	1
Roach back.....	1	1
Forelegs.....	1	1
Hindlegs.....	1	1
Size.....	1	1
Coat.....	1	1
Tail.....	1	1
General appearance.....	1	1
Total.....	11	10

Then came the competition for best bitch in the show, and through an oversight champion Cigarette was left out of this by the judge, through some misunderstanding regarding her eligibility, and it was only left for Ruling Passion to beat Queen of Sheba, which she did by 12 points to 6. The latter's points only being for face, ears, chest and neck, body, roach back and forelegs.

When Guido and Ruling Passion came out for the special for best in show there was little excitement, for every one of course thought that Dockleaf's vanquisher would win. The unexpected, however, happened this time and the bitch pulled off the verdict, and "Vero Shaw's" concluding remark, "Mr. Berrie's decision is, to my mind, as unaccountable as it is incorrect," according to other reports, describes exactly the opinion of most of the bulldog men on many of the decisions Mr. Berrie gave during the club's show, which will go down as one of the most sensational on record.

#### Death of Bob.

Those lovers of dogs who know the foxterrier Bob through Mr. Sumner's charming book, will sympathize with his owner on hearing of the death of this intelligent terrier by poison, May 24. There is little doubt that the act was one of pure malice. In official life Bob was known as Blemton Vesuvian, and it is needless to say after reading his autobiography that Bob was his owner's favorite. He had won a number of prizes and was by Champion Lucifer (as in *Present*) out of Blemton Vesta.

The Stockton, Cal., show will take place Sept. 20. It is rumored on the coast that Mr. Mortimer will judge, but this would be impossible as he is down to judge at the Rhode Island show that week.

Mr. Mortimer has sailed for England several times this summer, according to our contemporaries. He really sailed on the *Majestic* June 13, and has probably by this time "landed with both feet" once more.

#### Philadelphia Kennel Club Derby Entries.

The entries for the Derby Stake of the Philadelphia Kennel Club closed on June 15 with 38 entries, of which 31 are English setters and 7 pointers.

##### ENGLISH SETTERS.

TORY DIOMED—F. R. Hitchcock's black, white and tan dog (Count Gladstone—Tory Della), March.  
TORY DELL—F. R. Hitchcock's black, white and tan bitch (Count Gladstone—Tory Della), March.  
TORY DOLLER—F. R. Hitchcock's black, white and tan bitch (Count Gladstone—Tory Della), March.  
TORY BLAKE—F. R. Hitchcock's black, white and tan bitch (Count Gladstone—Tory Antoinette), May.  
TORY LUNA—F. R. Hitchcock's black, white and tan bitch (Roi d'Or—Tory Diamond), May.  
TORY LAURA—F. R. Hitchcock's black, white and tan bitch (Roi d'Or—Tory Diamond), May.  
BLENDON DOT—Tway & Levering's black, white and tan bitch (Chula Light—Dot Noble), May.  
ANNE OF ABBOTSFORD—E. A. Burdett's black and white bitch (Gladstone's Boy—Bohemian Girl), October.  
LADY MILDRED—Blue Ridge Kennels' black, white and tan bitch (Antonio—Ruby's Girl), March.  
TOM BAGGS—Blue Ridge Kennels' black, white and tan dog (Antonio—Ruby's Girl), March.

NELLIE FOX—Blue Ridge Kennels' blue belton bitch (Antonio—Can Can), February.

GENIVIEVE S.—Blue Ridge Kennels' blue belton and tan bitch (Antonio—Countess Rush), May.

TONT BOY—Blue Ridge Kennels' blue belton and tan dog (Antonio—Laundress), January.

POPILION S.—Murray Mitchell's orange and white dog (Antonio—Lilly Burgess), May.

LORRAINE—P. Lorillard, Jr.'s, black, white and tan bitch (Eugene T.—Lora), July.

EUGENIE—P. Lorillard, Jr.'s, black, white and tan bitch (Eugene T.—Dell), April.

ADVERSITY—P. Lorillard, Jr.'s, black, white and tan bitch (Eugene T.—Dell), April.

PALAMA—P. Lorillard, Jr.'s, black, white and tan bitch (Eugene T.—Lou), February.

ZERALDA—P. Lorillard, Jr.'s, black, white and tan bitch (Eugene T.—Lou), February.

SHAD—P. Lorillard, Jr.'s, black, white and tan dog (Eugene T.—Lou), February.

CYNOSURE—Avent & Thayer's black, white and tan bitch (Rodrigue—Norah II), May.

CLEMENTINA—Avent & Thayer's black, white and tan bitch (Rodrigue—Norah II), May.

COLUMBINE—Avent & Thayer's black, white and tan bitch (Rodrigue—Norah II), May.

ROMANCE—Avent & Thayer's black, white and tan bitch (Rodrigue—Novelist), May.

DIXIE'S FLAG—N. T. Harris's black, white and tan dog (Wun Lung—White Wing), February.

MARK BELTON—H. G. Sinnott's black, white and tan dog (Edge Mark—Nellie Belton), May.

PRINCESS EULALIE—J. H. Winslow's black, white and tan bitch (Rowdy Rod—Belle of Kentucky), February.

ARMINELL—J. H. Winslow's black and white bitch (Duke of Buckingham—Belle), May.

FREE LANCE—S. M. Mitchell's black, white and tan dog (Breeze Gladstone—Edge Mark's Nellie), June.

DASHING NOVICE II.—Manchester Kennel Co.'s black and white bitch (Gladstone's Boy—Queen Novice), March.

RUBY'S PEARL—Manchester Kennel Co.'s black, white and tan bitch (Antonio—Ruby's Girl II), August.

##### POINTERS.

HEMPSTEAD DON—Hempstead Farm's white and liver dog (Sanford Druid—Merry Legs), June.

JILT'S LAD—D. G. Rowland's liver and white dog (Lad of Rush—Devonshire Jilt), March, 1892.

TIPPOO—Charlottesville Field Trial Kennels' liver and white dog (Rip Rap—Monterey), March.

DELTRI—Charlottesville F. T. Kennels' liver and white dog (Rip Rap—Queen II), April.

SHAH—Charlottesville F. T. Kennels' liver and white ticked dog (Rip Rap—Dolly), May.

SEFOY—Charlottesville F. T. Kennels' liver and white dog (Hob Nob—Diana), May.

LUCKNOW—Charlottesville F. T. Kennels' black and white ticked dog (Rip Rap—Chin Chin), January.

After all the Derby entries were in a meeting of the field

trial committee was called, and as it was clearly evident from the falling off in entries that there would be a heavy deficit for the club to make good it was decided to abandon the trials and the treasurer was directed to return the entrance money to the respective owners of the dogs entered.

The falling off in entries is no doubt due to the present depression in business, and it was the opinion of the field trial committee that with the present hard times it would be an imposition to ask the members of the club to go down into their pockets and make good a deficit.

FRANCIS G. TAYLOR, Chairman F. T. Committee.

#### ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

In the prescription given in last week's issue "capshi sulph." should read "cupri sulph."

POINTNER, Chicago, Ill.—Wash the dog two or three times a week in solution of creolin, 1oz. to pail of warm water, soak the dog in well, say for ten minutes. Also give the following mixture:

R Mag. sulph. 5i  
Ferri. sulph. 5i  
Acid sulph. dil. 5i  
Aq. give one tablespoonful twice a day.

IRVING, Montreal, Can.—1. I have a foxhound bitch whose tail was broken when she was a pup; it is crooked and spoils her looks. Could it be straightened? 2. Another one, one year old, has a very thin coat and the skin is red in spots. It has been this way since having the distemper last summer. Would flour of sulphur rubbed into her coat dry be of any benefit to skin and coat? I am trying Spratts mange cure at present. Ans. 1. Yes. 2. If the mange cure does not do good, treat for worms, and use the following: Kerosene, coconut oil, castor oil and sperm oil, equal parts of each.

## Dachting.

### FIXTURES.

JUNE.	JUNE.
20. Cor. Phila., Jeanes Prize, Handicap, Delaware River.	23-24. San Francisco Cor., Cruise, Sacramento River Return.
21. Rochester, Club Sail, Charlotte, Lake Ontario.	25. Eastern, An., Marblehead.
22. Rhode Island, Spring Regatta, Narragansett Bay.	26. Seawanhaka Cor., 21ft. Class, Oyster Bay.
23. Cape Cod, Club, East Dennis.	26-27. Seawanhaka Cor. Race, Oyster Bay to New London.
23. St. Lawrence, 18ft. Class, third series.	27. Atlantic City Cor., Trophy Race, Atlantic City.
23. Sea Cor., Ann., L. I. Sound.	28. Rochester, Club, Charlotte, Lake Ontario.
23. Yonkers Cor. Ann. Hudson River.	29-July 3. Phila., An. Cruise, Chesapeake Bay.
23. American, Seaver Cup Newburyport.	30. St. Lawrence, A., 30, 25, 21ft. Classes, third series.
23. Douglaston, An. Open, L. I. Sd.	30-July 1. San Francisco Cor., Cruise, McNear's.
23. Fox Lake, Club, Fox Lake, Ill.	30. Jersey City, An., N. Y. Harbor.
23. Winthrop, Open, Boston Har.	30. Hull, Club, Boston Harbor.
23. Lynn, Expert Cup, Lynn, Mass.	30. Douglaston, An., L. I. Sound.
23. Columbia, Lake Race to Michigan City, Lake Michigan.	30. Seawanhaka Cor. Race, New London to Oyster Bay.
23. Phila., Pen., Mos. boats, Delaware River.	

"There are no less than five different measurement rules now in use by the clubs in our harbor. Such a well-known racer as the sloop Beatrice, for instance, measures all the way from 24ft. 4in. to 30ft. 11in."

THERE is a fruitful text for a sermon on a most interesting phase of the measurement question in the above remark of the *Boston Herald*. The conflict of rules which exists among the clubs of Boston Harbor, or to put it properly, of Massachusetts Bay, is no worse than about New York or in other localities; but the case is the more to be deplored because of the unlimited possibilities which exist about Boston for building up a strong system of local racing, and which at present, as in the past, are in no way realized. Adverse local conditions, the difficulty of passing quickly and safely from the Hudson to the Lower Bay, or from the Upper Bay to the Sound, must always stand in the way of interclub racing in New York waters, however much the rules may be perfected in the future; but about Boston the case is different, it is the custom to run from Hull to Marblehead, or even from Gloucester to Boston, for a race; and the open waters of Massachusetts Bay, wide as they are, offer no such obstacle to interclub racing as do the East River, Hell Gate, and the Hudson abreast of New York city.

The real obstacles to such an extensive system of local racing as is known nowhere else in the country lie in the lack of unity among the many interested clubs, and also in the various forms of the length rule still adhered to by many of the clubs, fostering a type that is unsuitable for the open waters which separate the club courses, however fast they may be over the home courses of their own club. It is a fact that these same boats, small open racing craft, do knock about the bay, attending the different races, and usually come out all right; but the type is none the less an undesirable one for the purpose and locality.

The entire racing fleet of Massachusetts Bay, from Cohasset on the south to Cape Ann on the north, is a large one in point of numbers, but fortunately for purposes of a racing classification it is limited to single-stick craft, there being no schooners to speak of, and the sizes range from 35ft. l.w.l. down to 15 or even 12ft. There are of course the large schooners and singlestickers of the Eastern Y. C., but they are not to be considered, having nothing in common with the many small craft.

The first step toward the improvement of the existing conditions alluded to by the *Herald* is the uniting of all the clubs interested, some 30 at least, in an association on a more or less permanent and elaborate scale, but at the very least uniting in the adoption of one common code of measurement, classification, allowance table and racing rules, including methods of starting, signaling, etc. The mere adoption of any one measurement rule and uniform conditions of sailing and racing would of itself be a great step toward the encouragement of racing, but to obtain the greatest possible benefit a thoroughly good and modern system of measurement and classification is absolutely essential.

The problem of the most desirable type of boat for Boston waters is a most interesting one, and has engaged our attention for a long time as one generation after another of racers has passed away. To meet the requirements of the majority of owners in the local clubs, the yacht, whatever her size, must be of moderate cost, strongly and staunchly built for something more than a short racing life, capable of making a safe passage across the Bay in almost any weather, with good accommodation if over 18ft. l.w.l., and speedy enough for racing with others of her kind. Though the racing machine has always existed, down to the 21-footers of 1892, the majority of the craft which race are at the same time in constant use, one season after another, by the same owner for sailing and cruising.

Under all the rules used for years length has been heavily taxed and sail has gone free, or nearly so, the heaviest tax on sail being that of the Seawanhaka rule, with a wateline length classification. Under such rules and other favoring conditions the boats are all short, broad and over-rigged, the best of a great many different types tried during the past thirty years being in our opinion the Cape Cod catboat of the Harbinger type. While fast, safe and seaworthy, these boats all suffer from the stunting effects of a length measurement not only lacking the overhangs which are absolutely demanded by

As no measurements had been taken no corrected times were figured. The regatta committee were E. M. McDonald, chairman; J. O. Sinkinson, Edwin C. Wood, C. L. Strohenger, and A. H. Funke.

## Vigilant Abroad.

"*Thalassia*," who is as well known to yachtsmen on both sides of the Atlantic as "Devoted Yachtsman" once was about New York, contributes the following to the *Yachting World*, of June 1, in which paper, by the way, is a portrait of the gentleman, with a picture of his new yacht, *Pontic*, designed by him.

"Vigilant comes. Then be vigilant, oh, ye English yachtsmen who are fortunate in owning 150 or 160 rats!"

"First and foremost, have your boats carefully measured for rating length and the marks affixed so that they represent (or exceed) the extreme length for immersion when the yacht is lying in smooth water in her usual racing trim, including racing crew on board, at and about mid-over-all length. Be careful to have the number of persons on board noted and recorded when the yacht is measured by the official measurer. Let this be a covering number to include guests when racing; never exceed this number, and when Vigilant arrives be careful to have her measured in a similar manner and strictly in accordance with the rule just quoted. Remember that Vigilant beat Valkyrie principally, if not solely, because she was driven by greater horse power—by a larger sail area.

"If she be measured properly in racing trim it is evident that no extra hands can be carried when racing under our rules unless these extra hands be on board when the length is taken. It is a well known fact that the extra hands she carried in the Cup races gave her additional length and speed, and that her rival, being of smaller beam, could not effectively obtain in a similar manner.

"She carried no less than 1,550 square feet more canvas than Valkyrie, and to a great extent did so by means of ballast, which was not on board at measurement. The racing here should be conducted strictly in accordance with Y. R. A. rules, and the spirit of Rule 15 is antagonistic to any form of ballast other than that of a centerboard and the ordinary crew of a racing yacht. In the smaller classes, 10-rating and under, this principle has been applied, limits in the total number of persons on board during a race being laid down for these classes by Rule 14, and the measurement for length taken according to the words 'racing trim' in Rule 3 can therefore only be translated to mean, with all due regard to the spirit of the rule, that it may be insignificant to some people, will probably have a great bearing on the success or otherwise of the Vigilant in these, or indeed in any other, waters.

"The yacht is so good that we cannot afford to give away any points in the game, and, although there is nothing in our rules to prevent her putting a very large number of people on board, we can and should insist upon the number being there when she is measured, and we can and should insist upon that number never being exceeded in any of our races or matches.

"Mr. Henry Allan, owner of the *Wenonah*, wrote to the *Field* last week concerning the inconvenience and the difficulty of attaching the marks for rating length; but the real reason for the necessity of having our waters so marked is the importance of having such marks on the hulls of all the competitors—marks which can be examined by any one in a dingy, either before or after a race. In the absence of such marks the racing trim might be altered very considerably and even the rating length of a yacht be increased without the owner being aware of it or intending to do anything wrong.

"The marks are great help to those who wish neither to receive nor to give any advantage; and the small amount of trouble connected with them is a mere cat's-paw when compared with the tempest of worries that continually blows on a racing owner."

"There is nothing in this that any one can object to; the rules are perfectly clear and fair to all, in fact, such an obvious evasion as that of Vigilant's last crew of last year is not possible under them, which respect they are better than the rules of the New York Y. C. In spite of the conservatism and selfishness of some clubs on both sides, which not unnaturally look to self-interest first and to the abstract principles of fair sport afterward, one of the encouraging signs of late years is the marked tendency toward fairer and more liberal rules and conditions, both between the club of one nation and between any two nations. While there may be some exceptions, we have little doubt that Vigilant will receive perfectly fair treatment in her races in British waters.

The following report of Vigilant's arrival was cabled from Gourock on June 16:

The American yacht Vigilant arrived at Gourock at 3 o'clock this afternoon, having made the passage from New York in 15 days and 9 hours. All on board are well, and the yacht is in splendid condition.

A representative of the United Press on board the tug *Champion* met the Vigilant off Cumbray Head, 18 miles from Greenock, at 1:45 o'clock this afternoon. The American yacht presented a beautiful sight as she sailed majestically up the Clyde, with all sails set. The Stars and Stripes flying from her foremast as straight as a steeple. The breeze was from the southwest, about 12 miles an hour.

The *Champion* ran close to the Vigilant, and the reporter boarded her. He was heartily greeted by Capt. Jaffrey and the other officers of the yacht. The rails and life lines of the Vigilant had been removed last night, and the decks were perfectly clear. The paint on the hull was hardly scratched. Capt. Jaffrey conducted the reporter to the cabin, where a large floral horseshoe in an excellent state of preservation was hanging from a stanchion.

Everybody on board was well, and there had been no sickness during the voyage. On the second day out the jigger was altered from the automatic sail to the fixed, and the weather was so good that there was a good deal of fog, the sun always shone at noon, so that they were able to get sights every day. The sails were hardly touched all the way over and the decks were nearly always dry. Capt. Jaffrey wears slippers the entire voyage.

The Vigilant covered 2,930 miles to Tory Island in 14 days and 8 hours. The course taken was only 25 miles longer than the regular course for steamers. The following are some extracts from her log:

Friday, June 1—At 9 o'clock in the evening passed South Shoal Light-house.

Saturday, June 2—Saw Anchor liner take a pilot.

Sunday, June 3—Foggy until noon.

Monday, June 4—Signalled steamer west bound at 6:30 o'clock in the morning.

Tuesday, June 5—Signalled a steamer at 4 o'clock in the morning; burned lights.

Wednesday, June 6—Signalled steamer at 2 o'clock in the morning; burned lights; she did not answer, although she was close aboard. At 4 o'clock in the afternoon passed an iceberg 200ft. high only 50yds. away; a lovely night.

Thursday, June 7—Calm; heavy sea; took in mainsail, owing to the rolling of the boat, from 8 to 12 o'clock at night.

Friday, June 8—Carried away topmast at noon; saved sail; made another topmast from spinnaker boom and had it up in five hours. Spoke tank steamer *Standard*, bound west; ran close and conversed; Standard cheered Vigilant.

Saturday, June 9—Fair sailing.

Sunday, June 10—Fair sailing.

Monday, June 11—Rainy and foggy.

Tuesday, June 12—Fair sailing.

Wednesday, June 13—Fog; occasionally clear.

Thursday, June 14—Foggy until 10 o'clock in the morning.

Friday, June 15—Sighted Malin Head at 11:30 o'clock in the morning, and at noon saw Tory Island due east. At 2 o'clock passed Tory Island, and reported 14 days 8 hours; fine passage. Tory Island signalled "Thanks." Shaped course east by south for Innistrath.

The time actually made by the Vigilant from Sandy Hook Lightship to Tory Island was 14 days 7 hours and 50 minutes. The daily runs, from noon, were as follows:

First ten hours 88 miles, second 225, third 126, fourth 133, fifth 241, sixth 211, seventh 243, eighth 225, ninth 211, tenth 127, eleventh 256, twelfth 188, thirteenth 198, fourteenth 143, fifteenth 246, two hours to Tory Island 33.

The yacht *Albatross*, with a party of Americans, met the Vigilant in the lower Clyde and cheered her. They afterward sailed in company with her to Gourock.

Vigilant was towed to Henderson's yard on Monday, where she will be fitted out as speedily as possible. Atlanta did not reach Cowes until Friday, so Capt. Hall arrived at Glasgow only after Vigilant was in. The steamer *Ethiopia*, carrying the racing spars and extra crew, was also detained at Cowes, and the Vigilant was towed to Glasgow, being used to reinforce the bulkhead after the bows were stove in. The spars were uninjured, but were not ready ashore, as it was expected they would be.

The regular events open to Vigilant's class after she is as follows: July 3, Royal Large; 4, Royal Western; 5-5, Mudhook; 7-9, Royal Clyde; 10, Clyde 12-12, Royal Northern. From the Royal Clyde the fleet goes to Ireland, the Royal District regatta being sailed on Belfast Lough on July 16-17, followed by the Royal St. George, at Kingstown, on July 18-19-21; the Royal Munster on July 24, and the Royal Cork, at Queenstown, on July 26. Then the fleet continues to Cowes, where the "Cowes week" begins on Aug. 7, with four days' racing by the Royal Yacht Squadron. On Aug. 11 comes the Royal Portsmouth Corinthian, on Aug. 14 the Royal Victoria, at Ryde, and on Aug. 20 the Royal Albert, at Southsea.

From the latter port the fleet sails on Aug. 23 for the station of the Royal Dorset Y. C., at Weymouth, this club giving a prize for the race, about 55 miles, and on Aug. 25 the same club will sail a race for the Queen's Cup given this year to the west, the Torbay Regatta being thrown open to Vigilant. Following this race will very generously be given the Royal Y. C. sails its regatta at Torquay on Aug. 27, then comes the Royal Torbay, and next the Dartmouth Royal on Aug. 30, and the Royal Dart on Aug. 31. On Sept. 1 comes the Start Bay Y. C., also at

Dartmouth, then on Sept. 4 the Royal Western, at Plymouth, on Sept. 5 the Port of Plymouth, Sept. 6 the Royal Plymouth Corinthian, and on Sept. 7 the Royal Southwestern, also at Plymouth. This ends the racing season save for special matches, such as the New York Y. C. cup. There will be some additions or omissions from this list, but it is substantially correct, and shows the run of the racing. We believe that Vigilant is eligible to all of the events, or at least she may become so by one of her owners joining a British club. Britannia, Valkyrie and Satanita will take part in all of this racing, with the older boats, Meteor and Iverna.

## Valkyrie's Passage.

The Glasgow correspondent of the *Boston Herald* gives the following particulars of Valkyrie's voyage:

After a lengthy passage of the Valkyrie across the Atlantic was beginning to excite some little misgiving in the minds of some of her admirers, therefore some relief was occasioned when she was spoken outside of the Irish coast early in the week. She arrived at Gourock Bay at 6:30 A. M. Thursday, the 31st, and proceeded at once to Greenock for customs clearance, and again returned to this bay. She proceeded yesterday morning up the river to Henderson's, at Meadowside, for a general tuning-up.

Capt. Cranfield and McGavin were well pleased with the boat's behavior under the adverse weather conditions they had to contend with, and seemed to think that the Valkyrie in the matter of passage-making had inherited a double dose of original sin, or rather, that she was only on six days having any day like leading winds, and then they were fairly good records, making an average of 232 miles over that period. The rest of the days were either paltry calm or ahead in the matter of weather, which accounted for the Valkyrie's long delay.

A twenty-eight-day record Capt. Cranfield admitted was a long one, and did not compare favorably with the *Lasca*'s, but, taking wind and weather conditions into consideration, he thought the Valkyrie's run compared well with that of the American schooner. Her biggest run was 247, while the *Lasca*'s was 255 miles, and this was explainable by the fact that off the wind a schooner of a similar size to a cutter is expected to do more leeward work. Taking the *Lasca*'s average for nine days, when she had the wind aft, she exceeded 200 miles somewhat, but considerably less than an average of 232 miles.

Of course it is difficult to compare different voyages under different weather conditions, and those who weigh up ocean passages must await international ocean races, a game that perhaps will never be worth the candle.

The following is the log of the Valkyrie, as supplied by Capt. Cranfield:

May 3. Left Sandy Hook at noon; very light winds at start.

May 4. Moderate breeze, with southwest swell, with a little fog. . . . . 85

May 5. Light northeasterly winds, southwest swell, with a little fog. . . . . 60

May 6. Fog and southwest swell. . . . . 140

May 7. High southwest swell and easterly winds. . . . . 236

May 8. South winds and squally, and high southwesterly seas. . . . . 232

May 9. Fresh breeze; high southwest seas; squally. . . . . 234

May 10. Fresh breeze; high seas and squalls. . . . . 230

May 11. Strong gale, with squalls; rain and high seas. . . . . 220

May 12. Strong gales and high seas which swept the decks fore and aft. . . . . 223

May 13. Strong wind, rain and heavy squalls. The yacht was hove to this day. . . . . 112

May 14. Moderate breeze, with southwest swell. . . . . 121

May 15. Moderate breeze, with southwest swell. . . . . 121

May 16. Light winds, cloudy and high swell. . . . . 48

May 17. Moderate breeze, cloudy weather and high easterly swell. . . . . 107

May 18. Strong winds and northeasterly swell. . . . . 184

May 19. Moderate winds, with northeasterly swell. . . . . 103

May 20. Light breeze, sky overcast and easterly swell. . . . . 101

May 21. Light breeze, with easterly swell. . . . . 101

May 22. Light breeze, with easterly swell. . . . . 148

May 23. Fresh breeze; squally; with easterly swell. . . . . 102

May 24. Squally and high easterly swell. . . . . 102

May 25. Light winds, fair weather. . . . . 121

May 26. Heavy squalls. . . . . 67

May 27. Moderate breeze, with easterly swell. . . . . 88

May 28. Light breeze, great part of the day. . . . . 62

May 29. From the north. . . . . 62

May 30. Light winds and heavy rain. . . . . 63

May 31. Anchored in Gourock Bay 6:30 A. M. . . . . 66

As to future movements, Cranfield is reticent. He does not deny that the boat is fitted to a greater extent and will be stripped of her copper, fied down and put into the best fettle that Mr. G. L. Watson and the Messrs. Henderson can devise, with the view of being tuned up to perfection and ready to meet the Vigilant and all comers in the Clyde carnival.

[Valkyrie crossed with no copper on the bottom being painted in New York.]

## Owner or Measurer.

The usual attitude of the racing owner toward the club and the measurer is neither fair nor logical, and most of the complaints made by him display a selfish view of his side alone. At best the task of the club in formulating rules is a difficult one, and the work of the measurer in applying the rules is still more difficult, and in practice the difficulty is vastly increased by the efforts of the owner, backed by the designer, to get a little more than any one else out of the rule. The effort of the club and the measurer are for the benefit of the owners as a body, while the constant end of each owner as an individual is to circumvent both rule and measurer. While many of the difficulties of measurement are unavoidable, there are still many others which are due solely to the desire of the owner to obtain more than he is entitled to, or at least to get the last title of his rights regardless of other considerations.

The following letter from the owner of the new *Dacotah*, appeared in the *Field* of May 26, and no doubt voices the opinion of many owners, but to us it appears unreasonable and illogical:

"Allow me to call your attention to the fact that the Y. R. A. arrangement for waterline marks is not only perfectly useless and absurd but very troublesome to yacht owners. In a modern racer the mark under the counter is invisible when the yacht is aloft. You might see it by swimming under the counter, but not by any other means. And in order to fix this useless thing you have to put your boat ashore, as it cannot be done when she is aloft. Then you probably find that it has to be altered, and the boat has to be hauled up again on the slip. It would be far better to give up marks altogether. The measurer could then take the waterline under the counter just as well as the owner who now has to do it."

HENRY ALLAN.  
No. 25 BOTHWELL STREET, GLASGOW.

In all modern methods of measurement it is absolutely necessary to determine and measure the waterline with considerable accuracy, and in doing this it is also very desirable to mark the points of measurement for future verification. On this point the clubs are agreed, and no thinking yachtsman will dissent from it. Under the most favorable circumstances, it is a matter of some difficulty to make this measurement, and further, it is not a matter of small importance to the owner of the owner, the measurer is often put to a serious inconvenience by the loss of time before he is given the opportunity to board the yacht for measurement. The most responsible part of the work is unquestionably the location of the two points of measurement, and the British rule, as it seems to us, very properly puts the responsibility on the owner, leaving it to the measurer only to ascertain the distance between the points as marked. Of the two, the owner is not only better able to do this than the measurer, knowing the proper trim in which he desires his boat, and having the opportunity for affixing the marks when docked; but it is altogether fairer that he should assume the responsibility, rather than that the measurer should first be compelled to take his measurement, after which the owner may question it.

The special difficulty with Mr. Allan's suggestion does not exist, but the reason for its existence is the desire on his part to gain an extra advantage through an extreme and peculiar form which it is almost impossible to measure accurately. Mr. Allan's right to this form is unquestioned, but as the form is deliberately intended to increase the difficulty of measurement by causing the waterline to lengthen as rapidly as possible, and to make it difficult to ascertain the responsibility for this difficulty on the measurer. If any one is to take the chills waters of the Clyde by swimming under the counter, as he says is necessary, the measurer certainly should not be called on to do so, but rather the owner or designer of the *fin-de-siècle* freak.

Mr. Allan's letter would have much more weight if it carried any practical or sensible suggestion for the improvement of the rule, but it does not. It is a mere suggestion that the measurer should assume all trouble and responsibility, relieving him entirely.

It is evident that under all existing rules the waterline must be measured, and until some better method is proposed the present one cannot be abandoned entirely. A writer in the following number of the *Field* makes the apt suggestion that in addition to the marks at the ends of the waterline two "Plumbol" marks should be placed, one on each side amidships. This would in itself be a very difficult matter, as compared with merely marking each end, and would be absolutely useless as a verification of the other measurement. We would suggest as a practicable remedy the placing of the marks by the owner in such positions as would make them fairly and unequivocally clear to the measurer in measuring trim, in accordance with the spirit of the rule, in which positions they would certainly be visible to the measurer.

## The Royal Victoria Cup.

The intention of Mr. Carroll to build a racing single-sticker and to challenge for the Royal Victoria Cup was first announced at a time when the chances for a challenge for the America's Cup were most remote; and yet this project met with decided opposition, not only from the New York Y. C., as was to be expected, but among other American yachtsmen, who were opposed to other than the defensive position in international racing. It is no wonder that the campaign planned by Messrs. Gould for their new purchase, Vigilant, should awaken a still more general opposition when it became known that a second challenge for the R. V. Y. C. cup was the main feature of the expedition. This feeling was based on two strong points, the fear that the continuance of racing for the newer trophy while the America's Cup rested without a challenge would impair the prestige of the latter, if it did not go so far as to displace it for an indefinite time in favor of its recognized rival; and also the chance that Vigilant, the declared champion of the America's Cup races, might be defeated in an important international contest in British waters, thus diminishing her achievements of last year. From the standpoint of many American yachtsmen the proposed contest was in every way to the advantage of the other side, as we pointed out last week, and the reasons given are certainly such as should have had weight with the Royal Victoria Y. C.

The *Boston Herald*, of June 10, discusses the matter as follows, presenting an extreme American view:

"It is to be hoped that the race that the Vigilant cannot race for the Victoria cup is true. The club by such action will be doing a great favor to American yachtsmen, and its decision will be sure to react upon itself. The Messrs. Gould were evidently willing to race for the cup; in fact, they had the sanction of the New York Y. C. to challenge for it. Had the Victoria Y. C. allowed a match to be made its cup would have grown in importance, and would have been second only to the America's Cup. The talk made so often by English yachtsmen that there is no need of a time notice is very inconsistent with their acts to-day, for now they are insisting on the time notice of eight months.

"The Victoria Cup has now no place, even as against the Cape May cup, for the good reason that only the *Navahoe* tried for it, and that race should be held for a number of years. Americans in racing for this cup lower the reputation of their own. So far as international honors go, the bringing back of the Cape May cup should be all sufficient.

"There is no doubt whatever but that a determined opposition will hereafter be made by the leading members of the New York Y. C. against allowing a number to again challenge for the Victoria cup. The New York Y. C. holds to-day the greatest racing trophy in the world, and all other cups should be made to play second fiddle to it. It is honor enough for any club to hold successfully so long the America's Cup.

"On the whole, it is a very good thing that the chances are against the Vigilant sailing for the Victoria cup. No doubt the members of the club, when they find out that their action has not allowed the Vigilant to race for their cup meet with much favor on this side may regret what they have done. If the Gould brothers are wise, they will give the Victoria cup a wide berth this season."

The *Boston Globe* has strongly opposed the proposed challenge for some time, as the following extracts will show:

"There are several obvious reasons, though probably they are more apparent to American than to British eyes, why a challenge for this cup would not be advisable, and therefore why such a challenge is not likely to be made.

"In the first place, as was explained at some length in these columns: at the time when negotiations for the last race for the America's Cup were in progress, the Royal Victoria cup was offered almost avowedly as an offset to the America's Cup while the discussion over the fairness or the unfairness of the new deal of the new deal of the new deal of its height. Any American challenge for it would therefore raise it in importance as an international trophy and under some circumstances would make it of almost equal importance to the America's Cup itself. The challenge of the *Navahoe* was regretted by many American yachtsmen, but since the New York Y. C. sanctioned it they were compelled to satisfy with the thought that since the *Navahoe* had no American record she could in no sense be considered an American champion. Her defeat also put aside the question as to which cup the British yachtsmen would consider the most important: should the Royal Victoria as well as the America be in possession of the New York Y. C. and for which one they would first challenge.

"The *Navahoe*'s challenge did not, therefore, materially change the standing of either cup, but a challenge from Vigilant would put an entirely different face on the matter.

"Vigilant is the American champion, and has won the title by a successful defense of the America's Cup, a trophy emblematic of the yachting supremacy of the world, and whose position has only been more and more firmly established by repeated contests. A challenge from the American champion for a trophy which was offered as an offset to the very cup that she had just won would be a challenge to place the cup for which she challenges on a championship basis, which it does not now occupy, which it ought not to occupy while the America's Cup is in existence, and which the opponents of the 'new deal of gift' would no doubt be glad to see it occupy.

"In short, a challenge and race for the Royal Victoria cup by the defender would be a challenge to the America's Cup, and would be a par with other, and would deprive the latter of its well deserved title of 'the blue ribbon of the sea.' Vigilant's defeat would make this undesirable position stronger, while victory would place two 'world's championship' cups in possession of the New York Y. C., and give British yachtsmen a chance to try for what by most American yachtsmen would be deemed the least important one.

"Vigilant will have many advantages in proving her speed in British waters for cups which do not in any way approach the America's Cup in importance. Records which she may make in this way will show her merits or demerits as clearly as if a championship cup were in dispute, while at the same time there is no interference with the position of the America's Cup.

"And that is why it is believed to be extremely doubtful if a challenge issued by the Royal Victoria club, or if a challenge would be approved by the New York Y. C. if made.

\*\*\*\*\*

"It is also possible that the action of the New York Y. C. in sanctioning a challenge was not quite so carefully considered as it should be, for it is certainly open to criticism on other grounds than those which have already been set forth against a challenge.

"The club's sanction was given on the condition that a waiver of the eight months' notice required could be obtained from the Royal Victoria Y. C. The obvious reason for this sanction a racing trophy coming season only does not seem to be very logical, however, on the part of the New York Y. C. to ask for a waiver of notice from another club which they would hardly grant themselves under the same circumstances. In this case the comparative powers of the challenger and of the defender, which would probably be Britannia, are fairly well known through Valkyrie, and the result can be foretold with reasonable accuracy.

"Transfer the situation to the America's Cup and there can be but little doubt as to what the action of the New York Y. C. would be. If it were asked to waive the ten months' notice required by the deed, of gift and accept a challenge from a boat whose chances of winning over open ocean courses were decidedly of the best as compared with any defender which could be put against her.

"In the last open cup contest the full ten months was insisted upon by the New York Y. C. Lord Dunraven was not offered earlier races as any waiver of that position, but because the American defender could be made ready earlier than was expected, and therefore there was no necessity of holding out for the full ten months, since Valkyrie's owner wished to race as soon as possible. The position as to a waiver of notice was fully and quite properly maintained.

"If, then, the position was so maintained, and that the chances of successful defense were at least even, can any one doubt what would be the position taken when chances of successful defense were very small? International cups are not offered to be given away, and the New York Y. C. would lay itself open to severe criticism from American yachtsmen should it throw away any chance of retaining a trophy which it had won by a fair and honorable race. At the same time it asks, through the Messrs. Gould, that the Royal Victoria Y. C. do just the thing which it would not do itself under similar circumstances. The position is not a logical one, and it is hoped, by the decision of the Messrs. Gould not to challenge, the club will not be forced to maintain it."

From the conditions of the case there is no doubt that both of these papers have spoken their opinion honestly and frankly, and that they represent the opinions of many American yachtsmen who are laughing at the way in which John Bull has again played into the hands of Brother Jonathan and thrown away another opportunity to better himself in international racing.

## Cape Cod Y. C.

The first race of a series of three, under the auspices of the Cape Cod Y. C., was sailed at East Dennis on June 9. The races were:

	Length.	Corrected.
Addie, R. O. Nickerson	25 00	1 06 41
Eclipse, H. H. Sears	25 00	1 09 17
Nobscussett, L. Hall	24 06	1 14 30
Nausett, J. H. Cummings	20 06	1 19 32

Quincy Y. C. Club Championship.

QUINCY-BOSTON HARBOR.

Saturday, June 9.

The opening race of the Quincy Y. C. was sailed on June 9 in a fresh and puffy westerly wind, the times being:

FIRST CLASS.			
Length.	Elapsed.	Corrected.	
Beatrice, John Cavanagh.....	26.00	1 40 10	10 53
Mudjokeewia, Davis & Abbott.....	25.09	1 41 03	11 41
Eulalie, R. G. Hunt.....	21.05	1 48 20	11 44
White Fawn, A. E. Jones.....	25.00	1 44 38	11 48
Moondyne, A. J. Shaw.....	24.10	1 46 51	11 32
Adolph, H. Moebis.....	22.05	Withdrew.	
Korban, E. M. Horton.....		1 50 32	
SECOND CLASS.			
Magpie, H. Gillis.....	19.08	1 25 15	0 58 07
Opeechee, H. P. Barker.....	19.08	1 25 50	0 58 42
Aurisa, H. M. Faxon.....	19.08	1 27 15	1 00 07
THIRD CLASS.			
In It, R. B. Williams.....	16.09	1 31 01	1 00 26
Wildfire, H. A. Keats.....		1 33 45	
CRUISING CLASS.			
Smoke, H. L. Rice.....		1 31 51	
Niobe, A. F. Schenckelberger.....	30.05	1 33 10	1 07 18
Janette, C. F. White.....	18.02	1 44 19	1 15 29
Elsie, G. M. Keating.....		1 44 55	
Hester, P. R. Blackman.....		Withdrew.	

There were cash prizes in each class and the winners take each a leg in the club championship. The winners were: First class, Beatrice and Mudjokeewia; second class, Magpie and Opeechee; third class, In It; special class, Smoke and Niobe.

White Fawn protested the Beatrice for fouling the buoy on Channel Rock.

Lynn Y. C. Expert Cup.

LYNN-LYNN HARBOR.

Saturday, June 9.

The Lynn Y. C. sailed the first race of the year for the expert cup on June 9, with four starters, in addition to which was a special race between Alpine and Sanspareille. The times were:

Length.	Elapsed.	Corrected.
Astrea, R. M. Benner.....	19.00	1 23 35
Black Cloud, E. H. Taylor.....	23.00	1 21 30
Tyrant.....		Did not finish.
Nellie Farley.....		Did not finish.
SPECIAL RACE.		
Alpine, C. Blethen.....	15.04	44 36
Sanspareille, R. Auger.....	11.00	44 31

The next race for the Expert cup will take place on June 23. Astrea was disqualified on protest of Black Cloud, for fouling a buoy, and the latter won the first leg.

YACHT NEWS NOTES.

The Yorkville Y. C. attempted to sail its tenth annual regatta on June 10, but met with bad luck, the race being a failure for lack of wind, while the yacht Stranger was run down by the College Point ferryboat Weehawken, and the judges' boat, Calamity, ran aground on the Hog's Back, in Hell Gate. All hands were rescued in each case. The winners, after a dull drifting match, were: Class B, cabin sloops, Marine Fox; Class C, open jibs and mainsails, over 23ft., St. Elmo; Class D, under 23ft., Regatta; Class E, open catboats, Jesse; Class H, open catboats, 20ft., Pride; Class I, open catboats, over 20ft., H. C. Miner; Class J, open catboats, under 17ft., Little Dean.

The annual regatta of the Williamsburg Y. C., on June 9, was spoiled by the light weather, only three yachts out of thirty-seven starters covering the course in seven hours.

The New Jersey Y. C. sailed its twenty-third annual regatta on June 12, but the starters were few in number, most of those entered failing to appear. The times were:

CLASS C-CABIN SLOOPS, UNDER 27 FT.			
Length.	Elapsed.	Corrected.	
Jennie, J. G. Freaney.....	5 09 30	5 07 17	
Wanderer, A. Wenzel.....		Did not finish.	
Bertha D., Chas. Dierking.....	5 13 00	5 09 00	
CLASS E-OPEN SLOOPS, 23 TO 30 FT.			
Charin, F. S. Ketcham.....	4 14 00	4 14 00	
SPECIAL CLASS S.			
Reliance, Mr. Sherman.....	5 24 26	5 21 56	
Inula, Louis Wright.....	5 13 14	5 12 12	

Tanna, steam yacht, has been sold by August Belmont to A. V. Arnold, of New York. Tanna was designed by Mr. Watson and brought to this country in 1892 by Capt. Morgan, who sold her to August Belmont when he purchased May last year.

What is considered as a radical departure from all precedents in yacht building has been received in this city, and is now in Sargent's warehouse. This new craft is expected to take part in the yacht races that will occur here in June and July. She was built in Fort Worth, and may be classed as a whaleback yacht. She is such a pronounced departure from marine architecture that her performance will be eagerly watched by all those who take an interest in yachting matters. She is a queer-shaped object, too, being about 32ft. in length by about 6ft. beam. She has no straight lines and is of the shape of a large cigar, pointed at the forward end, and has a whaleback extending from the forward part to about 15ft. aft, and she is claimed to be in all respects absolutely unsubmergeable. She has air chambers fitted inside and her forward bulkheads are airtight; she has a centerboard which is very heavy, being made of iron, heavily weighted with lead, and her rudder is as massively constructed. She draws only 2ft. amidships, and will have but little resisting power, compared with other yachts, when being propelled through the water. She is lugger-rigged, and it is understood that but one man will be required to sail her.—*Galveston Star.*

C. Oliver Iselin, the head of the Vigilant syndicate, and once owner of the Titania, and at a still earlier date of the sandbagger Mary Emma, was married on June 9 to Miss Hope Goddard, daughter of Col. William Goddard, of Providence, a wealthy heiress. Mr. Iselin's first wife, who was so closely identified with Titania during her first and second seasons, died in 1890. Mr. Iselin has sold his new 21-footer to Wm. P. Douglass and will sail shortly for Europe, spending the summer afloat in a steam yacht which he will charter in England.

The first squadron sail of the Brooklyn Y. C., on June 10, to the Great Kills, was a very pleasant affair, some twenty yachts taking part.

Banshee, 40-footer, has been sold to Henry Doscher, owner of Wacondah.

The new Waterhouse & Chesebrough 21-footer will be a centerboard, of 30ft. over all, 21ft. l.w.l. and about 6ft. beam, with a Tobin bronze centerplate of 30ft., making not over 200lbs. on the penant, and about 400lb. of lead on the keel. McIntyre & Kirke are building her in the lightest possible manner.

The firm of Gardner & Mosher has been dissolved, Mr. Mosher retiring from it to continue the steam engineering, in connection with his boiler. Mr. Irving Cox, who has been associated with the firm for some time, takes Mr. Mosher's place, the new name being Gardner & Cox.

What are we coming to? First the Acteon, then the Silvio, and now the famous schooner Mohican changed into party boats. *Sic transit gloria mundi.*—*Boston Herald.* So far as Mohican is concerned she, like Ambassador, was built too late after the day for huge lumbering schooners, of clumsy model and rig, had gone by.

The Country Club, of Westchester, has offered prizes of \$75 first, \$50 second and \$25 third (the latter if six or more boats start). The prizes will be plate or cash, as winners desire. The course will be about 6 miles, twice around, on the Sound off the Country Club, on July 7. Entries may be made to W. D. Thorne, 30 Broad street, N. Y., not later than noon of July 6.

Dr. W. Whitehead Gilliland, of the Riverside Y. C., has just sailed around from New Bedford, Mass., a new Cape cat of 19 ft. l.w.l. built for him and named Arveka.

The description of Mr. Howard's canoe in the *Field* dissolves the mystery which has thus far surrounded the craft, and confirms our surmises that she is of the conventional American type in dimensions and lateral plane, and quite unsuited to British rules and conditions. At the same time it appears that Mr. Howard has a chance for success in the fact that he has taken the enemy unawares, few canoes, old or new, being ready to meet him. The experience of Nautilus and Pearl in America in 1886 show that the quick turning qualities called for on the Thames are of less value in open courses than the straightaway speed of the American canoe; but there can be no doubt that on the Thames the reverse is the case and that quickness in handling will be the main factor.

The statement that the New York C. C. had asked for a change of the rules is news to us and we are inclined to think that the *Field* is in error in this matter. While such a change was not possible under the circumstances, the R. C. C. has arranged for a series of two out of three races on open water, for a special cup, to be sailed for at Burnham-on-Crouch later on. Mr. Howard's intention, in the event of defeat on the Thames, was to challenge the Royal C. C. to a race across the Channel, but the offer of the R. C. C. removes the necessity for such a demonstration of the speed of American canoes on open courses.

Mr. Howard's Canoe.

From the *Field*.

SATURDAY last was by no means a day one would pick as a fair trial day for our American visitor to exhibit the paces of his canoe; cold as December, and a hard wind blowing in savage puffs, whips of wind striking the water in every conceivable direction, bar that of the true wind above the treetops. But Mr. Howard launched his canoe, and set off down Teddington Reach under whole sail, and had there been other canoes out we think that probably the exhibition would have still been in favor of the American—at least, from an acrobatic point of view.

The sailing lasted but an hour, yet five times was he capsized forcibly, but each time he hove her upright, and continued sailing with little more than wet feet. Knowing where the savage puffs were likely to be, he had stop watch ready, and we timed him; the shortest time from over to up again was 5s. 1/2—the longest 24s., but this time he was securing a paddle, which he had just been using to get her about on the lee shores.

Righting from a capsize is nothing new to expert canoeists, and we have often done it on open water in 15s.; but in a vastly different type of canoe and without the powerful lever aid of the long sliding-seat which Mr. Howard uses to heave his boat up with. Also, his sails being small, i. e., the area, 112sq. ft., divided between two sails of 60ft. and 52ft., where ours were usually 95ft. and 17ft., he has not the heavy drag of a 12ft. or 14ft. boom and a big sail full of water to counter-balance; nor was there any motion on the water such as one meets in open water when the wind is heavy enough to cause a capsize.

Of the American canoe we may safely say she was extremely fast between the capsize; she ran and reached like a hare, but she had none of the hare's doubling powers; several times the paddle had to be used to bring her about. She is extremely light, and seemed to immediately lose all headway and come astern on being put head to wind; but, as we said before, it was a savage day for so light a boat. It was the kind of wind our old-time sailing canoes would revel in, but not nice sailing weather for our modern flimsy craft. To look on at such work is simply enough to drive nine out of ten would-be canoeists into yawls or half-raters. Sailing there was none; the boat was all over the water, and the sails scarcely ever trimmed. An acrobatic performance was being tried, and every power of the sailor, in and out on the long sliding-seat, the only rest being obtained when a capsize gave a few seconds in a new position.

But the canoe is of the last type, the type fostered under the late pinched rule, and things would probably have been very different in a canoe fully up to date under the new rule—that is to say, so far as standing up to the squalls and handling are in question; but as to speed on the straightaway, trying to outstrip if any craft shorter and more beamy, and probably with more displacement, would be anywhere near the American boat. Her turning powers are faulty to a degree, except at turning over—at that she is quick enough for any lover of turtle turning; and a dead peg and many turns in the cup race will show this fault badly against her fine speed on the straight.

The canoe, we are informed by the owner, is 16ft. long by 30in. beam, and, judging solely by eye, we should say her depth would be not more than 10in. from deck edge to keel. There is no perceptible rocker to her keel, and her stem and stern posts are about perpendicular; thus she has about 16ft. of l.w.l. The horizontal or water-line shows a considerable hollow both at bow and stern, as also do the vertical sections at and toward the ends of her. Aft the sections show comparatively round, overhanging quarters; and forward, they produce a hollow or sectioned bow. The mid body shows but little hollow, there being an easy rise of floor at every place, and but a small amount of freeboard. Indeed, she is more like the bottom of a boat with the top forgotten and a deck clapped on.

Her centers are evidently well placed, judging by the waves and trim, both when sailing upright and heeled in a breeze, but she undoubtedly piles up water under the hollow lee bow, and seems to grip viciously thereby. The center plate being very far aft, and the mizzen being hollowed white cedar, comparatively thick, but light and stiff, the lee bow against the helm, but in moderate and light winds this would be small matter, and perhaps even useful.

The rig is exactly that known in England for years past as the Bembidge sail—a gaffsail and topsail in one—the sail being hoisted and held by the topsail luffspar or yard, and spread aft by a gaff, pocketed in the sail and jawed to the mast, with boom and battens in the ordinary manner of batten sails. The spars are a marvel of lightness, being hollowed white cedar, comparatively thick, but light and stiff. The sails and gear need not be looked at; they are rather a "wholesale sold by the yard" kind of mixture, not likely to raise any looting desires in the heart of a seaman or barge.

The structural fittings of the canoe, though not different to ours, except as to the well floor, are a lesson in neatness, lightness and strength combined. She was first reported to be a fin, bulb keeled boat, but she proves to be a simple light center-plate craft, with no keel except at the extreme ends. The sliding seat is about 5ft. 6in. in length; the slide plank works upon a four-legged stool, which stands about 2 1/2 in. to 4in. above the center of the deck or coaming level, clamped to the side decks by its four metal legs.

The well floor, or foot-bath, is barely ankle deep, and appears to give him no real being above level of the water, and the level of the loadline is self-bailing. With such a structure of "well" of course, there is no below-deck space available, while sailing, for stowing away even a mackintosh coat, and in case of a breakage of slide-seat or of spars the canoe would be in "queer street." However, the craft and all her fittings form, and are intended to form, a pure racing machine; safe, perhaps, for her slipper, but absolutely dangerous to the sport of canoe sailing; the very type of machine which it is hoped the new R.C.C. rules have killed off.

On the other hand, we now turn to the English side, to see what the old country will put against the American challenge craft. We hear now of two new canoes building in all haste, with a hope of being afloat in time for the race on June 19. At present they are dark horses, and the only items of interest reliably reported are that each has a waterline of 14ft., is up to limit of 3ft. beam and 16ft. over all length, and of 6 ft. Y. R. This the sail race of 1894. The R. C. C. will be 129sq. ft., and in one of the boats this will be all in one balance lug.

Both boats are to have sliding seats; but one, we know, will only have a plain centerplate, possibly novel in shape, but of no persuasive balancing power; and the other boat, report says, is also to be fitted with ordinary centerplate. We must hope, therefore, that one of the bulb-keel canoes from Oxford will come forward to do battle; but even then she will be deficient in beam under the new allowance, and not in all parts up to date, unless indeed something quite new is building at Oxford on the sly.

Referring to the doings in America, we may see what further monstrosity we have escaped from by altering our measurement rules. We are informed that the Milwaukee, which carried all away last year at the Western meet, is this year to come to the line with 300sq. ft. of sail and a 7ft. hilling seat—this on a canoe of 10ft. by 30in. beam. With the rules of the two countries at such opposite poles, it is scarcely to be expected that any of our men will trouble to mount such a craft and visit the States for racing purposes.

A meeting of the committee of the Royal C. C. was held on Wednesday to consider a request from the New York C. C. that the English challenge cup should be subject to three races, two of them on open salt water. Unfortunately the rules of the club preclude any alteration in the conditions, except by vote of a special general meet-

ing; and the time for notice of such meeting, and the holding thereof would place the meeting beyond the time already fixed for holding the race for the cup. A motion to waive these rules was defeated by a vote of five against four at the committee, so the cup race will be sailed on the original day, June 19, in one race at Bourne End.

But the meeting unanimously resolved to vote a special cup to be raced for on open salt water at Burnham-on-Crouch in two races, with a third race if necessary, and such race will probably be held early in August. So that except in the title and value of the cup, though the old challenge cup will be raced for in one race on the huky, confined narrow waters of the Upper Thames, the real international contest and undoubted sailing merit will be decided on comparatively open salt water on the fairest course within reasonable distance of London. The canoe which is too fickle or fragile to sail the Burnham course is nothing but a snare to the novice and a standing danger to the sport of canoe sailing.

CENTRAL DIVISION: Alexander B. McDowell, Rochester, N. Y.

CANOE NEWS NOTES.

The Knickerbocker C. C. will hold a camp at Egg Beach, on June 30-July 1, with scrub races and other amusements.

Rifle Range and Gallery.

New York Central Schuetzen Corps

HELD its fourth monthly practice shoot of the season at Union Hill Schuetzen Park June 14. The weather was clear and it was a good day for shooting, 45 members were present. The majority having lost their rifles at the recent fire in Washington Park, the scores were not so satisfactory as if they had had their own arms:

Champion Class.	
F Schmidt.....	70 87-137
H D Muller.....	69 61-130
F Schroeder.....	66 56-122
J Eisenhardt.....	82 56-118
Lippenfeld.....	63 52-115
J Dux.....	58 54-114
First Class.	
E Richards.....	60 44-104
C Pletz.....	48 46-94
Second Class.	
C F Gennerich.....	63 63-125
E Berkman.....	67 57-124
W Koch.....	62 61-123
W Teschnaker.....	63 56-119
J Jordan.....	61 52-113
Third Class.	
H Holsten.....	65 54-119
M Ficken.....	60 58-118
Fourth Class.	
A Richter.....	54 34-88

Following are the scores made on man target: H. Kroeger 59, J. Reitweissner 56, J. Eisenhardt 50, R. Flerd 55, F. Schudt 54, H. D. Muller 53, E. Berkman 53, W. Koch 52. Bullseye target: Champion class—F. Schudt 3, H. D. Muller 1, H. Kroeger 1; first class—J. Eisenhardt 2, E. Richards 1; second class—E. Berkman 3, H. Grennerman 3, F. Baumann 2, J. Jordan 1, W. Koch 1, M. Teschnaker 1; third class—Schneeweiss 1, J. Foersch 1; fourth class—Jutgens 1.

Point target: Champion class—H. D. Muller 54, J. Reitweissner 34, F. Schudt 24, F. Schudt 19; second class—E. Berkman 40, W. Koch 40, J. Jordan 26; third class—Schneeweiss 65, J. Foersch 36; fourth class—Jutgens 24.

Class medals: Champion class, F. Schudt; first class, J. Eisenhardt; second class, E. Berkman; third class, Schneeweiss; fourth class, Jutgens.

Man medals: first man, medal, H. Kroeger; second man, medal, J. Reitweissner. H. L. MULLER.

Brooklyn (E. D.) Schuetzen Corps.

The annual festival and prize shoot of the Brooklyn (E. D.) Corps, Louis Dohling captain, was held in the new Glendale Park, Long Island, on Wednesday and Thursday of last week. This park is one of the most beautiful parks which has been fitted up for picnic and shooting purposes. It is now under the management of H. Koenig, who is well known to our local shooters as the late proprietor of Woodlawn Park, Long Island. The park is pleasantly located for picnic purposes, and with improved facilities in the matter of transportation to and from the city, will become popular.

The programme for the two days' festival comprised eagle shooting for the annual king, prize shooting for cash prizes and medals. The kingship fell to one of the popular members, Wm. F. Hollwed, who was crowned with the usual ceremonies. There was a large attendance of riflemen, and the competition for winning scores on the prize and medal targets was brisk and resulted in the making of some high totals on the part some of the competing marksmen. On the prize target Messrs. Holges and Hamann tied for first and second place, each with 72. Ross was third with 70. On the medal target the first medal was to go to the marksman making 55 points out of a possible 75 in three shots. The competition resulted in a tie between Messrs. Mahken, Marten, Hamann and Holges, each making the required number of points called for. In shooting off the tie the medal was won by Mahken. The second medal was shot for under the same condition, with the exception that 37 points was the required number of points called for. There were four ties for this medal, Messrs. Holges, Hamann, Ross and Omel. On the shoot off the medal was won by Holges. The third medal was to go to the shooter making the lowest score in three shots, each shot to count at least one point. Ross succeeded in grouping three shots in the target whose total was 7, which gave him the medal. Scores: Holges 72, Hamann 72, Ross 70, Flach 69, Schmitz 69, Eilers 63, Plaisted 63, Krauss 67, Marten 65, Hollwed 65, Horney 63, Worn 63, Feltheus 61, Mahken 63, Muth 63.

Zettler Rifle Club.

TEN members of the Zettler Rifle Club visited Wissel's Cypress Hills Park June 17 to participate in the bi-monthly practice shoot. The weather was clear and the atmosphere decidedly torrid.

Ross was in good form and put up the fine score of 235. This would be considered a good score if made from the rest. Some of the members participating were decidedly off form. Scores:

F C Ross.....	24 22 23 24 25 22 23 25-235
	23 24 24 23 25 21 19 23 23-228
	21 25 23 23 21 35 22 21 21-220
H Holges.....	24 22 23 23 21 20 22 24 23-224
	22 24 22 22 22 21 20 20 23-221

Bullseye, 4in. center, 3 shots, possible 3: Ross 2, Krauss 2, L. P. Hansen 2, C. G. Zettler 1, Holges 1.	
Man target, 3 shots, possible 60: Holges 56, Walther 55, Hansen 55, Ross 55, C. G. Zettler 52.	

Columbia Schuetzen Corps.

The Columbia Schuetzen Corps, of Brooklyn, N. Y., held its annual festival and prize shoot at Wissel's Cypress Hills Park on June 10 and 11. It was intended to have shooting on the short range on the first day, but the shooting element not being on hand to make the affair a success the shooting part of the programme was abandoned and the day was devoted to social enjoyment.

The programme for the second day was shooting on the 200yds. range, open to all comers, for cash prizes and medals, as well as to decide the kingship of the Corps for the year 1894. The weather was clear and warm, but the attendance of riflemen was far from satisfactory, and the result was that there was not sufficient competition to cover the expenses of the programme. The programme called for 14 cash prizes ranging from \$30 to \$24, 3 shots per ticket, German ring target.

On the medal target there were two medals up for competition, 3 shots per ticket, German ring target. There was considerable competition for the medals and at the close of the shoot F. C. Ross was presented with the first on a score of 69 and H. Holges second with a score of 68.

The scores of the winners of the cash prizes are appended in their order. Prize target, 3 shots, possible 75: Ross 71, Krauss 70, Holges 70, Plaisted 69, Hansen 68, Young 66, Eberhardt 65, Langsdorf 64, Weber 63, Horney 61, Rosenbaum 61, Weikersrider 58, Feldhussen 53, Mosch 49.

## Dominion Off-Hand Rifle Association.

PARRY SOUND, Ont., June 9.—I here transmit you for publication the scores made by the members of the Dominion Off-Hand Rifle Association Clubs on their home ranges on the 1st and 2d inst.:

Parry Sound First Team.		200yds.	
I Morrish	7 10 10 10	6-43	10 9 10 4 10-43-86
G White	9 5 10 10	8-48	10 8 5 10 8-41-79
W Huff	10 7 9 4	6-36	7 10 10 4 10-41-77
T Newburn	7 7 10 10	9-37	6 8 10 7 7-34-71
F Laurie	7 7 8 9	10-41	2 10 1 6 9-28-69

Parry Sound Second Team.		157 383	
J R Leggett	7 8 5 10	8-33	5 10 8 10 0-33-66
Thos Yates	6 4 10 9	7-36	10 9 1 1 9-30-66

## Rifle at San Antonio.

At the meeting of the San Antonio Rifle Club held on the last Wednesday in May the following trophies were ordered:

1. A gold medal for the best ten scores of ten shots each, to be shot within twenty weeks from date at the 200yds. range, muzzle rest, any sights desired. Second best average, silver medal.

2. A gold medal for the best ten scores of ten shots to be shot within twenty weeks from date at 200yds. off hand. Second best average, silver medal.

The following scores were made at the range on June 3, 200yds., off hand, American standard target:

Texas Field	10 6 6 6 6 6 6 8 10 6-70
G Altmann	8 6 8 6 8 5 10 5 5 12-67
E Seffel	9 6 4 8 6 6 4 4 6 10-66
Same, rest:	
A Altmann	12 7 9 9 10 8 11 11 9 9-94
A Koehler	7 7 4 7 7 5 9 5 8 7-66
E Seffel	9 12 9 11 10 9 11 8 10-98
E Dosh	10 7 7 9 11 8 11 7 10 9-87
A Herff	9 9 8 12 9 11 7 7 8 10-90
G Altmann	12 9 10 12 8 7 8 9 11-95

Off Hand, 200yds.	
Texas Field	7 4 9 9 8 7 10 4 7 8-73
A Steves	7 6 8 8 8 8 6 7 5 7-71
G Altmann	5 5 4 8 8 8 6 9 4 10-67
A Uhl	5 7 7 4 10 9 8 9 6 8-73

Same, rest:	
Dosh	9 9 12 9 9 8 8 9 9 9-92
A Steves	9 10 11 7 9 10 10 8 10-93
A Uhl	10 9 12 11 11 9 12 9 7-100
Hummel	8 10 10 10 9 9 9 10 10 9-85
G Altmann	9 10 11 10 10 11 9 9 10-98
A Herff	11 11 11 10 8 9 12 12 11 9-104

## Newark Shooting Society.

The Newark Shooting Society, after its last reorganization, decided to hold an opening practice shoot on June 14, in the Schuetzen Park. Invitations were sent out to our local shooters to come and participate. Knowing that this old society had been in a state of inactivity for a long time, our rifle promoters, upon hearing of the proposed opening, decided to put in an afternoon with the society.

Our arrival in the park had some disappointment in store for us. We found three members of the Newark society on hand to receive the visitors.

The visitors outside of the Forest and Stream contingent consisted of two enthusiasts from Jersey City, Messrs. Hansen and Varrick.

We found many improvements in the park since our last visit. One of the most prominent features in connection with the park improvements is the improved facilities of transportation to and from the park. It is now possible for the New York riflemen to reach the park from New York in less than one hour.

The half-dozen shooters who were gathered in the park on Thursday devoted their time to practice and pool shooting. A friendly 10 shot race between Messrs. Hansen and Hayes resulted in the following scores:

Hansen	22 25 22 23 23 21 16 23 20 23-220
Hayes	21 21 19 20 22 20 20 23 24-210

Mr. Hayes has not had any off-hand practice for many months, and he is consequently off in form.

After the above match three shot pools were indulged in by all hands present, with the following results: Hansen, 68 66 70; Hayes, 61 70 63; Plaisted, 64 51 64; Wigman, 64 69; Reinhardt, 55 51; Dietz, 57 62.

## Wilbraham Road Scores.

SPRINGFIELD, Mass., June 9.—The Smith & Wesson Pistol Club made the following scores at their range, on Wilbraham Road, last night:

Twenty yards:	
CS Axtelle	10 9 9 10 9 10 10 9 9-94
J Goodrich	9 9 9 10 10 9 8 10 9-92
O Clark	8 10 10 9 9 9 9 9 9-91
F G Hodskins	10 9 9 10 9 10 10 8 16-90
W O Whiting	6 8 10 9 9 8 7 10 7-82
D W Ware	6 8 8 7 10 9 8 10 6-82
CS Hodskins	6 7 9 9 7 7 9 9 9-80

Fifty yards:	
CS Axtelle	10 9 10 9 10 10 8 6 10-92
J Goodrich	10 8 10 9 10 10 8 10 10-93
O Clark	10 8 8 9 9 9 9 8 7-85
F G Hodskins	10 10 9 7 10 8 9 9 7-83
D W Ware	6 10 7 10 8 9 9 10 6-85
CS Hodskins	9 10 6 9 10 9 10 7 6 3-84

## Shell Mound Record Breaking.

SAN FRANCISCO, June 11.—The Columbia Pistol and Rifle Club did a bit of record breaking yesterday at Shell Mound range. C. M. Daiss, one of the young men of this new but promising organization, made a score of 97 in a pistol competition. Only a few weeks ago A. H. Pape, another of the younger members, registered a score quite as meritorious as Daiss's in the total number of credits, but of inferior quality in the judgment of marksmen who look at scores from a Creedmoor standpoint. Pape scored 97 under the same conditions as Daiss did yesterday, but unfortunately for the former marksman the string of Daiss's registering shows a greater number of good shots at the end than the 10-shot scores of Pape. It is believed that the competition by Daiss yesterday is the best ever recorded in a pistol competition on the Pacific Coast. Whether it will continue to be such for any considerable time is hardly probable, for there are men in the Columbia Club who are doing some rare target hitting these days. The Columbia is a new club, but already one of the foremost, and what is more gratifying than anything else is the fact that it is surprisingly fruitful of better results at every monthly meeting. Among the Columbia cracks are such men as Kellogg, Young, Kuhle, Rodgers, Johnson, Hovey, Heath and a host of others known as far as the international prominence of California marksmanship extends.

The score made by Daiss yesterday was shot on the 50yd. range at a standard American target, and shows in this way on the score book:

C. M. Daiss, 10 10 9 10 9 10 9 10 10 10-97

On the same target, in this contest F. O. Young scored 91, L. O. Rodgers 81, S. I. Kellogg 88, A. Baumgartner 84, F. Gehret 78, Kennedy 78, Kuhle 70.

In the pistol contest by club members the scores in the champion class were these: C. M. Daiss 90, S. I. Kellogg 88, Smith Carr 86, E. Hovey 84. In the first class A. H. Pape registered 89, L. O. Rodgers 86, F. Gehret 85, A. Baumgartner 81, and F. Bohr 83. Among the second class men and those unclassified D. M. McLaughlin scored 89, F. Kuhle 82, A. Gehret 72, A. H. Kennedy 68, A. Fetz 59, Vaugh 55.

With the rifle at 200yds, these scores were made by marksmen in the champion class: L. O. Rodgers 85, D. McLaughlin 84, F. O. Young 83. In the first class F. Baumgartner recorded 86, A. H. Pape 87, A. Gehret 78, F. Gehret 71, A. Bohr 75. The men of the second class were successful to this extent: C. M. Daiss 65, L. Zimmerman 64, A. Kennedy 59, A. Fetz 57.

Between these many contests the Columbians contrived to insert another of considerable interest for the Roos medal. In this affair F. O. Young scored 89, L. O. Rodgers 84, F. Gehret 80, A. Gehret 78, and P. Bohr 68.

Andy Johnson led the Columbia Club men in a Springfield rifle match for the Glimmerman medal with 79 rings, Young second with 75, F. Moulton 60, A. Gehret 59, L. O. Rodgers 58.

ROELL.

## Spring Branch Tournament.

The following is a list of scores and prize winners of the shoot held at Spring Branch, Texas, June 10, standard target, 4 shots, 15yds., rest, open sights:

1. Wm Remler, Spring Branch	40	15. Wm Klinger, Twin Sisters	35
2. Wm Mueller, Twin Sisters	39	16. F Koch, Twin Sisters	35
3. H Brumner, Green Valley	39	17. P Remler, Spring Branch	35
4. A Topperwein, Vogel Valley	39	18. H Dittmar, New Braunfels	35
5. Joe Frey, Green Valley	39	19. A Reiningner, Green Valley	35
6. O Pope, San Antonio	38	20. H. Vogel, Vogel Valley	35
7. H. Reising, Green Valley	38	21. O Neigebauer, Spring Branch	35
8. E Wickman, Kuhns Halle	38	22. F Arnke, Twin Sisters	35
9. O Vogel, Vogel Valley	38	23. M Liemann, Twin Sisters	34
10. F Kaederle, Spring Branch	38	24. F Weinström, Spring Branch	34
11. Wm Pope, Vogel Valley	38	25. F Haag, Vogel Valley	33
12. G Reiningner, Green Valley	38	26. O Vogel, Spring Branch	33
13. Wm Fieser, Twin Sisters	38	27. H Trisich, Twin Sisters	33
14. H. Knible, Toll Verein	36		

There were 168 contestants and some 14 clubs represented.

## Schlicht Rifle Club.

The weekly gallery shoot, June 12, of the Schlicht developed some good scores. The medal winners were: C. Meyer champion medal, Geo. Dorr first class medal, J. Schlicht second class medal, J. Dedrick third class medal. Scores: G. Schlicht 240, G. Dorr 240, C. Meyer 235, W. Schlicht 227, J. Schlicht 227, E. O. Brallentin 227, A. Meyer 225, J. Diehl 224, E. Wagner 223, F. Lembrich 221, J. Dedrick 221, J. Bonders 220, Conrad Schlicht 215, G. Richert 214.

## Palisade Rifle Club.

The following scores were shot by the members of the Palisade Club, June 13, 10 shots, possible 250, distance 25yds. Scores: Fred. Esper 238, Fred. Krobatsch 238, R. Glaser 232, C. Hemberger 221, Heury Rose 214, Wm. Ahles 213.

## RIFLE NOTES.

The thirty-seventh annual festival and prize shoot of the New York Schuetzen Corps which takes place in the Union Hill Park on Wednesday and Thursday of this week, should be the means of bringing together a large number of our local marksmen. A programme of \$500 is decidedly liberal in these hard times. It will certainly give some of our experts an opportunity to make their careers.

The Brooklyn Schuetzen Corps will hold a two-days' festival and prize shoot in Glendale Park on Wednesday and Thursday of this week. The shoot is open only to invited guests.

The Greenville Club of Greenville, N. J., will send a team to Portchester, N. Y., June 30, to engage in a team match with the Portchester Club.

The return of the members of the New York Independent Corps from the Adirondacks last week is said to have developed an increased demand for black fly and mosquito remedies. The Jersey members report a new experience in their acquaintance with the Adirondack species. One of the members has drawn an interesting word picture of Barney Zettler seated upon a stump on the shore of Lake Saranac trying to coax a woodchuck out of his home with a pretzel.

AMHERSTUR'S Greenville Schuetzen Park has fine facilities for salt-water bathing. Bath houses are located foot of park, on Newark Bay shore.—adv.

## Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

## FIXTURES.

June 24-26.—West End Gun Club tournament, at Davenport, Iowa.

June 26.—Union Gun Club tournament in conjunction with monthly team shoot of New Jersey Trap-Shooters' League, at Springfield, N. J.

June 27.—White Plains (N. Y.) Gun Club bluecock tournament. L. C. Platt, Sec'y.

June 27-28.—Interstate Manufacturers' and Dealers' Association's sixth tournament, under the auspices of the Elwood Gun Club, at Elwood, Ind. Elwood Gun Club will add \$200.

June 27-28.—Springfield (Ohio) Gun Club first amateur tournament.

June 28.—New England Shooting Association championship tournament, under the auspices of the Colt Hammerless Gun Club, at Hartford, Conn.

June 28.—Bradock (Pa.) Gun Club tournament.

June 28-29.—South Lima (Ohio) Live Bird and Target Association's tournament.

June 28-29.—Binghamton (N. Y.) Gun Club's first annual tournament. R. W. Brown, Sec'y.

July 4.—Orangeville (Md.) tournament; open to all. J. A. Hartner, Sec'y.

July 4.—Towanda Rod and Gun Club's sixth annual tournament, at Towanda, Pa.

July 4.—Townshend (Vt.) Rod and Gun Club tournament. P. E. Howard, Sec'y.

July 4.—Central City Gun Club tournament, at Charleston, S. C.

July 4-5.—Burlington (Ia.) Gun Club tournament.

July 4-5.—Oregon State Sportsmen's Association tournament, under auspices of Willamette Rod and Gun Club, at Portland, Oregon.

July 4-6.—Winner Cartridge Co.'s second tournament, at St. Louis. Bluecocks and sparrows; open to the world. J. L. Winston, Sec'y.

July 5.—Little Rock (Ark.) Shooting Association tournament, open to all. Address Paul R. Litzke, Sec'y, Little Rock, Ark.

July 11-12.—Dixie Gun Club tournament, at Pensacola, Fla.

July 16-18.—Standard Gun Club tournament, at Baltimore, Md.; \$150 added.

July 18-19.—Interstate Manufacturers' and Dealers' Association's seventh tournament, under the auspices of the Kentucky Gun Club, at Louisville, Ky. The Kentucky Gun Club will add from \$200 to \$400.

July 18-19.—Dr. Wallade's bluecock target and live bird tournament, at Newport, Mich.

July 24-25.—Lafayette (Ind.) Gun Club tournament.

July 25.—Central New York Trap-Shooters' League, fourth tournament, at Syracuse.

July 26.—New England Shooting Association championship tournament, under the auspices of the Willamette Rod and Gun Club, at Willamette, Conn.

Aug. 13-15.—John Parker's fourth international tournament, blue rock targets and live birds, at Des-chree-shos-ka Island, near Detroit, Mich.

Aug. 21-24.—Pennsylvania State Sportsmen's Association annual tournament, under auspices of Altoona Rod and Gun Club, at Wopsononock Park, Altoona.

Aug. 23.—New England Shooting Association championship tournament, under the auspices of the Atlantic Trap Shooting Association, at Lynn, Mass.

Aug. 29.—Central New York Trap-Shooters' League, fifth tournament, at Auburn.

Sept. 3.—Enderavey Gun Club's annual shoot, Marlon, N. J. E. Hollister, Sec'y, Jersey City Heights, N. J.

Sept. 19-20.—Interstate Manufacturers' and Dealers' Association tournament, under auspices of Greensboro Gun Club, at Greensboro, N. C. The Greensboro Gun Club adds \$200.

Sept. 26.—Central New York Trap-Shooters' League, sixth tournament, at Rochester.

Oct. 3-5.—West Newburgh (N. Y.) Gun and Rifle Association tournament. Last day live birds. W. C. Gibbs, Sec'y.

Oct. 10-11.—Interstate Manufacturers' and Dealers' Association tournament, under auspices of the Palmetto Gun Club, at Charleston, S. C.

Oct. 22-24.—Emerald Gun Club tournament, at Dexter Park. Targets and live birds. Dr. G. V. Hudson, Sec'y, 9 Madison street, New York.

Oct. 24.—Central New York Trap-Shooters' League, seventh tournament, at Utica.

Nov. 23.—Central New York Trap-Shooters' League, eighth tournament, at Syracuse.

## DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

Among the members of the Lynchburg Gun Club are a number of prominent politicians and several clergymen and lawyers, nearly all the other members being well-known business men. Hon. C. M. Blackford is the leading lawyer of the city; Dr. S. Preston, beside being a celebrated physician, has traveled extensively and is an accomplished linguist; R. D. Yancy is Mayor of the town; Col. John M. Otley is city auditor; F. P. Christian is Judge-elect to the Corporation Court; R. L. Lacy is city collector; and L. B. Betty, Rev. J. J. Lloyd, Rev. W. H. Atwell and Rev. Dr. Carson are honorary members and often visit the grounds, evincing great interest in the club shooting. Dr. L. W. Watson, another prominent physician, S. W. Wingfield, clerk of the Corporation Council; W. V. Wilson, lawyer, and

C. H. TOWNSEND.

Saturday was Live Bird Day

and a searching day it was, a day, however, on which the famous

The first shot was a Mercury marked 88, at 1 P. M., 90, and at 2 P. M., 91. The second was a brick bat, freeze, however, during the entire day and this made life bearable. Owing to evening all the target screens had been removed from the field, and three sets of traps were also taken away, this giving room for the live bird contests. The arranging of the grounds and the furnishing of the pigeons for the live bird shooting was in charge of John W. Fulford.

It was shortly after 9 A. M. before the opening event, at 5 live birds, \$3 entry, three moneys, was called, this being ended at 10:40. At 11 o'clock the Dean Richmond trophy contest was called, there were a fair number of shooters on the grounds, and before the race was ended they numbered close to 1,000.

The Dean Richmond trophy, for 3-men teams, is valued at \$1,100, and this, together with 60 per cent. of the entry fees, goes to the highest club, the next in order getting 40 per cent. of the entrance fee, which is \$30 per team, each man shooting at 15 pigeons. The shoot included eleven regular entries, and the New York County Gun Club being qualified to shoot for the birds.

The snow was clearing all the way through, first one team and then another fought to the front, E. H. Keller was referee, Jacob Pentz and C. H. Townsend acted as scorers. There were a fine lot of winners for the season, and wagers were offered that the best wild cove better than 40. The members of all the teams were on their mettle, however, and at the finish it was seen that the Oneida County Sportsmen's Association and New Utrecht Gun Club teams had scored 2 each, being for first place. They agreed to divide the cash and the trophy, for the trophy at 5 birds per man. The birds used in the shoot were "all alders," bird, this fine exhibition resulted. The New Utrechts lost only one bird, this was his fifth bird, while in the ground with the second, and then, much to the surprise of all, arose and fopped over the fence, falling dead into the limpid waters of the romantic Mohawk. The Oneida County team killed 12, The Whitestown Gun Club took second prize with 41 kills. In this contest James Glover and Richardson used 10-bores, C. Ferguson, 3d, a 16-bore, and J. B. Smith, 10-bores. The team of the West Netherburgh Rifle and Gun Association and the West Netherburgh Riflemen, when they withdrew. Rayland lost 5 birds up to the seventh round. One of the features of the team race was the shooting of young Ferguson on the New York County team, Ferguson is twelve years of age and is a master hand with the gun.

No. 1, 5 live birds, entry \$3, N. Y. rules:

C. H. TOWNSEND.

Iowa State Association.

SECRETARY'S OFFICE, INDEPENDENCE, IOWA.—Editor Forest and Stream: The seventeenth annual convention and tournament of the Iowa State Sportsmen's Association was a success in every way, even the weather clerk did his best to help us out. The election of officers was held June 6, and resulted in the re-election of N. S. Young as President, by a unanimous vote. Gen. E. Hughes, Vice-President, George Henderson, of Cedar Rapids, was elected Secretary and A. D. Maxson, of the same place, as Treasurer. D. H. Miller, Carl Leopold, H. M. Seever, L. M. Walker, I. M. Lobenstein, directors. An elegant banquet was served at the Gedney Hotel after the business meeting. Cedar Rapids was selected as the place for holding the next annual tournament after a hot contest. The scores follow:

First Day, June 5.

No. 1, 15 targets, entrance \$2, equitable: Clark 18, Georgeson 12, Christiansen 13, Bacher 11, Chingren 12, Hughes 13, Bolland 10, Young 9, Prior 10, Esterly 13, Hageman 12, Donovan 10, Nichols 14, Kelly 7, Frazier 10, Kid 11, Agard 10, Trotter 13.

No. 2, 12 targets, entrance \$1.50: Bacher 9, Frazier 12, Jekeln 11, Chingren 12, Georgeson 9, Christiansen 9, Miller 3, Kid 4, Clark 12, Hughes 11, Trotter 11, Agard 9, Nichols 10, Bolland 10, Esterly 10, Folstad 4, Young 9, Donovan 10.

No. 3, 8 singles and 2 pairs, \$2, equitable: Nichols 10, Saxton 7, Hocken 9, Georgeson 9, Wilson 9, Grimm 8, Hughes 10, Bloeser 11, Booth 8, Prior 10, Hageman 10, Woodbury 8, Bacher 10, Lammers 6, Trotter 7, Frazier 10, Kid 9, Lohy 8, Folstad 2, Runge 9, Cleveland 10, Van Vleck 4, Clark 9, Leopold 12, Young 6, Hoover 7, Seever 10, Young 9, Letts 7, Avery 9, Chingren 11, Palmer 8, Christiansen 10, Conrad 8.

No. 4, 20 targets, L. C. Smith cup:

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

## Forest and Stream Water Colors.

WE have prepared as premiums a series of four artistic and beautiful reproductions of original water colors, painted expressly for FOREST AND STREAM. The subjects are:

Jacksnipe Coming In.

Bass Fishing at Block Island.

"He's Got Them" (Quail Shooting).

Vigilant and Valkyrie.

The plates are 14x19in. They are done in twelve colors, and are beautiful and artistic in effect. They are furnished to old or new subscribers on the following terms:

FOREST AND STREAM one year and the set of four pictures, \$5.  
FOREST AND STREAM six months and any two of pictures, \$3.

Remit by express money order, postal money order, or postal note. Make orders payable to

FOREST AND STREAM PUB. CO., NEW YORK.

## SCOUTS FOR PARK POACHERS.

FOR many years the most important thing to be considered in connection with the Yellowstone Park was the securing of a law which should provide punishment for offenses and should give to government officials in charge of the reservation the necessary authority to hold offenders who have violated the rules provided for its protection by the Secretary of the Interior. Such a law has at last been passed and promises to give to the National Park a protection which shall actually protect. It will be something more than a mere name—a shadow without substance. Swift punishment will overtake the offender, and the regulations will no longer be a laughing stock.

As the Park has an area not much less than that of the State of Connecticut, it must be evident that to patrol it effectively requires a considerable force of men, and as by far the greater portion of this area consists of rough mountain peaks, deep river valleys and tangled forests, which often bristle with down-timber, it is essential that a part of the patrolling force should consist of men who are accustomed to the mountains, and who through their long experience among them are able to pick their way over the roughest country and to measure wits, experience and mountain skill with other mountain men who constitute by far the most dangerous class of poachers.

For many years the superintendents of the Park have begged the Secretary of the Interior to give them a larger force of scouts. The soldiers do excellent work as guards

in many parts of the Park, but from the very nature of the case—from the conditions of their lives and from their training—they cannot do the work required of the scouts. The Secretary of the Interior has invariably declined to grant requests for a larger force of scouts, giving as a reason for this refusal that there was no money available which could be applied to the payment of any additional men. Yet we know that the Park brings in annually some small revenue, which by law is to be applied to the preservation and protection of the reservation, and the paltry sum of \$1,500 would give two scouts, which would just double the present force. It is evident that two men can cover twice as much ground as one, but even two men would be a very small force for a territory so wide as that under Capt. Anderson's rule.

No one is more intimately acquainted with the needs of the reservation than the present superintendent, and he has done everything that any man could do with the means at his command to protect the Park. If the matter lay with him, there would be no question about an adequate force of scouts. Such a force is especially needed at the present time, when it is of the utmost importance to capture and punish two or three violators of the law. When this has been done and the fact has been noised abroad through the surrounding country, the business of poaching in the National Park will come to an end so suddenly that it will surprise us all.

## THE VICTIM OF HIS CHEF.

THE proprietor of an eating house on Sixth avenue, New York, has just been made the victim of his chef in a way calculated to excite sympathy. The circumstances came to light in the case of the People of the State of New York against Samuel F. Burns, for selling game out of season. The case was tried on Monday of this week, and its story should be read for instruction and warning by every restaurant keeper, who, though he may lay a course to steer clear of the Scylla of the State game protectors, is liable to be wrecked on the Charybdis of his cook.

The game law as in force in 1893 forbade the sale of quail and woodcock after Jan. 31. On Feb. 17 of that year State Game Protector Kidd was advised that game was being sold illicitly at Burns's restaurant, and he came into possession of a bill of fare taken from the restaurant on Feb. 11, on which the item of woodcock appeared in the list of game dishes then served. On Feb. 18 Protector Kidd visited the Burns place with a companion and ordered, received and ate four woodcock. On the following Monday, Feb. 20, he went back with two friends and the party was served with six quail. The protector then entered suit for the recovery of the penalty of \$25 for each bird, and after repeated delays the case was finally brought to trial last Monday in the City Court.

The fact that the game had been served was abundantly proved by the testimony of the protector and of those who had been with him on the occasions referred to. No attempt whatever was made by the defense to deny this. Mr. Burns, however, testified that it was his custom at the beginning of the close season to give directions to his chef and other employees that no more game should be sold. That he personally managed the restaurant and had supervision of the business. That he himself, or his cashier under his direction, ordered all the supplies for the establishment. That neither he nor his cashier would or could have ordered quail or woodcock out of season. That he personally inspected twice every day the ice chests where supplies were kept and where the woodcock and quail would have been stored on the 18th and 20th of February, 1893, if there had been any in the establishment; and that on those occasions he saw none there; that he did not know that they were there; that he did not know who wrote the entry of woodcock on the bill of fare of Feb. 11, which had been put in evidence; that if Protector Kidd and his friends had been given quail and woodcock in his establishment on the dates alleged, the birds must have been bought for the restaurant, put on the bill of fare, and served to customers by the chef without his (Burns's) knowledge or consent, and in contravention of his direct and explicit orders at the beginning of the close season.

In short Mr. Burns posed on the witness stand as the innocent and much-injured victim of his wicked cook, an evil-minded chef who had maliciously persisted in purveying game to guests under his very nose, and much to

his surprise and consternation when he discovered it at length only through the agency of the complaint served upon him by the game protector. Mr. Burns played this role of injured innocence and guileless intent with such grace and effectiveness that he won, if not the tears of the jury, at least their substantial sympathy, for while they might have brought in a verdict for the entire amount of the penalty, \$250, they took compassion upon him and fined him only the sum of \$100. This we are inclined to believe was as much cash as Mr. Burns could in fairness have been asked to surrender by any reasonable person accepting his statement of the case, and believing that he was innocent and had been made the victim of his cunning chef.

The protector was represented by Mr. Russell Headley, of Newburg; the defendant by Mr. Chas. A. Hess, of Hess, Townsend & McClellan, of this city. Mr. Hess is a sportsman himself, and at the conclusion of the case, after having done his duty by his client in the court room, he expressed to Dr. Kidd his cordial sympathy in the work of game protection, and volunteered to conduct any further cases the protector might bring in this city, without fee or reward other than the satisfaction of helping the cause. Dr. Kidd has expressed an intention of taking Mr. Hess at his word and enlisting his services in a black bass suit now on the calendar. Mr. Headley, it should be added, has given his services gratuitously, and at the expense of much valuable time taken from his home practice.

## THE FOOLISHNESS OF THE FLASK.

SOME folks, who at home are so little given to the use of strong beverages that they cannot without difficulty distinguish between whisky and brandy and gin, foolishly imagine that when they go into the woods for fishing or shooting they must provide themselves with a flask of liquor as an essential, conventional and approved part of their outfit.

It is not necessary to consider this from the standpoint of temperance or abstinence as such, but purely from that of personal comfort and common sense, to recognize the absurdity of such a notion. People who habitually and with satisfaction to themselves do without liquors at home can habitually and with just as much satisfaction do without them in the woods and on the water. They can, in fact, do without them much better than they can do with them.

For one instance where a flask is brought into useful service to withstand the effects of exposure or fatigue in an outing, there are twenty where it demoralizes the stomach and the head. For one life it has ever saved in case of "snake bite" it has cost a score of fatal accidents which without it would never have happened.

Many go shooting and fishing—or declare that they do—for the benefit of their health; and they talk with conviction and enthusiasm of the upbuilding influence of forest and stream. It is a puny influence indeed that must needs be pieced out with a flask; and punier still if with a jug.

That one who uses liquor at home should use it in camp is quite natural; and with such a use we are not concerned. But that one who is unaccustomed to liquor at home should consider himself unbound to provide himself with it for the woods is certainly an illustration of the foolishness of the flask.

## DEATH OF HERR VON DEM BORNE.

Herr Max von dem Borne, the distinguished German fishculturist, died at his home in Berneuchen on June 14. Herr von dem Borne was well known in this country because of his achievements in fishculture, and more particularly as the pioneer in the introduction of American game fishes into European waters. He was the first to transplant the American black basses, and by reason of his success with them was called the father of the black bass in Germany. He also imported successfully into his home waters from America the rock bass, calico bass, rainbow trout, common sunfish, long-eared sunfish, dogfish, common bullhead or bullpout, channel catfish, common minnow and crayfish. He was the author of numerous works relating to fishculture, their value being recognized in Europe and America. By his death the fishcultural interests of two continents have suffered a severe loss.

FOREST AND STREAM will go to press on Monday next week,

## The Sportsman Tourist.

### A JUNE PASTORAL.

ON my grandfather's plantation in North Alabama there lives a colored servitor familiarly known as "Ches," who is, perhaps, the happiest darkie in Dixie. A patriarchal family of sons and daughters "hoe de cotton an' plow de corn," relieving him of all responsibility for the present, and no well-constituted negro has a future this side 'o' kingdom cum.

But, "what ye shall eat, and wherewithal ye shall be clothed," is not a serious matter in the South, especially when one goes barefoot three-fourths of the year and beholds in a spread of corn pone and possum a feast for the gods. The accident of numerous progeny, therefore, is to Ches only incident to unlimited opportunity for leisure, wherein to luxuriate in the four-fold popularity he enjoys anent his prowess as a hunter of "varmint," his skill at fishing, the voodoo incantations he chants for the relief of his unfortunate countrymen who are "hurt" (i. e., poisoned with that greatest of mysteries, African poison), and the powerful sermons he preaches for the salvation of souls.

Previous to the late war, Ches was the most refractory of slaves, idle to a degree, and sure to run away every year so soon as blackberries were ripe and it was warm enough to sleep comfortably in the woods. During that memorable sectional struggle, when society was anarchy, and fear abode an unrelenting guest with his master's family; when slaves were demoralized and insurrection imminent, none was so faithful to every trust. When peace and freedom came together, Ches married his wife according to the gospel and remained in his cabin. As his children multiplied and waxed great in stature, he added other rooms, in a row, each smaller than the last, until now his dwelling resembles a monster telescope, long drawn out.

When I was a boy Ches was my oracle. From him I imbibed the love of field and stream, and learned the fables and traditions of his race. He held me on my horse when I learned to ride, and also taught me where to seek for game and how to load and shoot the single-barreled fift. fowling piece of a long-gone age, contemptuously left in the house as worthless by the proscription of two invading armies. Armed with this antiquated instrument of destruction, supplemented by a goodly supply of rocks, in Ches's hands still more deadly weapons, we sallied forth almost daily in search of game, principally rabbits, and, as the keen eyes of my dusky comrade seldom overlooked one crouching in his form, our bags were usually equal to the number he was willing to "tote."

It was a proud day for us both when I at length succeeded in tumbling a rabbit running, as from that time we hunted upon more equal terms—the shot, or throw in the "bed," belonging to the man who discovered the game, and as I was seldom so fortunate, Ches had a chance at most of the game that we killed, and for many a year killed most that we bagged.

About the advent of my twelfth year rabbits began to pull upon my taste for sport, and I burned for adventure with nobler game, but it was long before I could win consent from Ches, who realized that rocks would stand but little showing there, to plunge into the forests. Many and gruesome were the stories he told me of savage "varmint," and still more fearful "whipsnakes," to deter me from the venture, and when at length my young imagination no longer feared a painted devil, direful were the prognostications of evil with which his prophetic soul marked our setting forth.

"Sumpin sho guine ter happen, honey, ef we goes in dar," he said when we reached the woods. "Don't yer heary dat squitch owl holler? Dat's er sho sign er death; an' sides dat yer did 'n' hab no raid string ter fling ober yer shoulder when dat rabbit cross de rode. We ain't guine to hab no luck, de Lord knows."

"Come on, Ches," I pleaded. "Squitch owls can't hurt us, and you made a cross mark and spit in it when the rabbit crossed the path—that broke the charm."

"Ah, I'm er guine, honey; but I's pow'ful jùbous 'bout hit."

We had not gone far before a squirrel frisked out of a briar patch and ran chattering to the top of a tall gum, where Ches soon espied his shining eyes peering at us from a leafy covert, and tried in vain to point them out to me. When my neck would no longer stand the strain of looking upward I allowed myself to be persuaded that the rodent would escape, and sadly relinquished the gun to my companion, who quickly brought him down.

I saw the next squirrel that was found, but missed him. Ches "turned" him for me again and again, but I missed him every time, until finally, the poor little fellow, almost scared to death, took a flying leap for another tree, miscalculated the distance and fell to the ground, where he lay stunned for an instant. I ran to pick him up, but he recovered before I could reach him and ran up a small willow near by. I insisted I had killed him, or, at least, had wounded him so badly that it was impossible for him to escape, and prevailed upon Ches to climb the tree to catch him. When he was about half way up the squirrel ran out, and as he swung upon a pliant branch I blazed away, and Ches hit the ground with a yell and a thud, his legs full of shot. Fortunately he was more scared than hurt, but that ended the hunt for that day.

For more than a week following this adventure Ches was too stiff and sore for tramping, and not being allowed to hunt alone, enforced abstinence from my favorite amusement was sufficient retribution for my recklessness, and made me so thoroughly careful for the future that no other accident ever befell us afield; but it is needless to add that I could never again induce Ches to climb for game so long as a loaded gun remained in my hands.

My departure for college put an end forever to all familiar intercourse between us. For the most part my vacations were spent from home, or were engrossed by the pleasure of society, and when my school days were over I branched out into the world, and it was not until several years had flown that I located permanently amid the scenes of my youth. When I did return, however, I received no more cordial greeting than that accorded me by this much-imposed-upon and long-suffering associate of my early sports.

As I have said, Ches has developed into a mighty fisher of fishes as well as of men, and it seems that the perfect

advent of the present June brought back to him, in connection with his favorite pastime, some tender reminiscence of our adventures together, as he tramped several miles, under some mystic influence, to bring me the joyful tidings that fish were biting at one of our old haunts, a pond in his neighborhood, famous for the multitude of its finny denizens, and to urge me to accompany him upon an excursion thereto on the following day, "des fur de sake ob ole times."

"Why, boss," he said, "dey fairly makes de water bile, dar's so many ob dem."

"Pond fish are not good at this season of the year, Ches," I urged, "and besides, I have no minnows."

"Dat's all right, boss; yer cum, an' I'll fine de minners, an' eat de fish too ef yer don't want 'em. 'Sides dat, yer don't need no minners; dey bites at craws an' wurms."

"I don't care to fish for that kind, Ches." Some recollection of the piscatorial desire of my boyish days that was content with anything that could bobble a cork, evidently flashed through his brain; but he was too polite to express his astonishment in words—he only said: "I'll sho hab de minners; you des cum, dat's all I asts yer."

"Very well," I at length consented. "I will go out to the 'old place' to-night so we can get an early start."

That Ches's idea of early differs materially from mine, had escaped me, and it was with a malediction upon all fishermen that I rolled out of bed at daybreak in response to his announcement that it was time to be off; that he had routed out the cook, and that breakfast awaited me in the dining room.

The pond in question is a miserable hole, about 100ft. in diameter, that is supposed, by the negroes, to be bottomless owing to an underground connection that causes it to rise and fall with the Tennessee River. It is subject to overflow, and the receding floods leave it teeming with fish—more, usually, than it can support during the summer's stagnation. In July and August, countless numbers come to the surface for air, falling easy victims to clubs in the hands of those insufficiently epicurean to eat them, mud and slime tainted as they are.

Early as we were, we found a goodly number of dusky anglers already reveling in large and rapidly increasing catches of mud-cat, suckers and perch; and by noon I counted no less than thirty-nine poles over the water, upon which rested the hope of twenty individuals. I had noticed when we started that Ches carried a bundle of rods that would have burdened a burro, and had silently wondered how he expected to attend to so many lines if fish bit as he expected. So soon as he had routed two or three usurpers, as he seemed to regard them, from a famous trout hole under a spreading oak and had installed me in their seat, he proceeded to bait his hooks and distributed them at regular intervals around the pond to my increased amazement; but I soon found there was method in his madness, as will appear. This business attended to, he seated himself upon a root near my side and undertook my entertainment and his own by questioning me upon my travels, and by involving me in theological disputes upon points as intricate and no less metaphysical than the heresy of Nestorius.

Every few minutes some one would yell, "Run, parson, run! yer got er bite!"

"Des pull 'im out fur me, honey," he would reply, with never a move unless the catch was of unusual size, in which event he would bestir himself sufficiently to add to it by his string in the water, provided always that some accommodating youngster had placed it in his hands.

At the beginning of this extraordinary exhibition of ideal still-fishing, I paid but little attention; but as the day wore on I saw through its frequent recurrence, and could but admire the ingenious rascal's cunning expedients for indulging his constitutional aversion to motion. I marveled at the stupidity of his friends, thus tamely submitting to be put upon; finally concluding that African good-nature is unlimited, when one of the "sisters," not 20ft. away, drew in for the reverend gentleman a small cat not more than 3in. long, that flopped from the hook and went rolling down the bank only to be desperately pursued by the woman, upon all fours, who hardly effected its capture just at the water's edge, and not until she had floundered a foot deep in mud and slime. She came up wet and dripping, but radiant, holding aloft the fish in triumph and exclaiming with a grin: "Bless de Lord, I saved 'im fur yer, parson!"

"Thank yer, Sis' Jane, thank yer! Des' bait de hook an' set hit out ergin, won't yer?" and then turning to me he resumed his interrupted conversation: "Yas sah, boss, es I wuz sayin', dat trout yer des cotch am er buster! Speck he am de same one dat broke my line las' week—bran'-new line at dat. Cos' me ten cents in town, an' de on'list store lin' I had. Ise sho glad yer got 'im fur er fac'. My king! des look at dat pole ben'. Ef dat ain't er scaly-cat de verst finest fish dat swim. Sah? Yer don't eat 'im! des teck an' cut 'im up thin, an' fry 'im brown an' yuther fis ain't in de same bilin' wid 'im. White folks am sho curious."

I had carried my small-bore rifle along, hoping to kill a squirrel, and by and by a bullfrog popped up his head near the middle of the pond. I threw up the gun, intending to put a bullet between his eyes, but such a chorus of groans and shrieks, and such a scampering from the other side of the hole greeted my aim that I did not fire.

"What's the matter with those negroes?" I asked Ches. "You see, boss, er nigger 's er plum fool erbout powder—don't lack ter smell 'im burn nohow. Las' summer sum po' white trash wuz er projekin' roun' heary shootin' musrats, an' hit er 'oman in der laig, an' since den yer des pint er gun at de water an' dese niggers scatter same as er gang er patridges when yer fling er rock at 'em."

That reminded me of our old hunting. "Do you still kill rabbits with rocks, Ches?"

"Who, me? No, sah! Ise got er gun now."

"Breechloader?"

"What er nigger kno' 'bout breechloaders, boss? Ise got de bes' musket yer eber see. I kin teck dat gun an' kill er squ'el plum in de top ob de highest tree in dis bottom."

"Ever been shot for a squirrel, Ches, since I ruined your pants for you?"

"Now see heary, boss, I 'lowed yer dun furgot dat. 'Twant de shot dat spilt dem breeches, hit war fallen out'n de tree when yer shot me. I came down so hard dat hit des nat'ly bus' 'em wide open. Man! I wuz sho skeered dat time—skeered wuz den I eber wuz in my born days 'cept onct."

"When was that, Ches?"

"Dat wuz 'fore de wah, honey, 'fore yer wuz borned."

I'd dun run erway one sum'er ober heary in San' Mountain. Ole marster wuz rite behin' me wid de dorgs an' I wuz meckin' tracks fur de fur kentry. Folks dun tole me better stay offen dem mountains at night, dat de varmints would ketch me, but hui! I wuz fur gitin' plum erway twell de crap dun laid by, an' night wuz my time fur guine. Wal sah, hit wuz er putty night, sho. De moon wuz shinin' same es day, when all ter onct I heard er fuss right afore me. Yer nebbber heard sich er racket. Seem lak de 'ternal hills wuz er tum'lin' in an' I 'lowed er cattermountin had me sho. I had two ob ole marster's pistols I dun stole, but I wuz skeered so bad dat I plum furgit I had 'em an' I couldn't run ter save me. De racket cum closer an' closer, an' dar I stood er trem'lin' an' prayin' ter de Lord ter help me, an' what yer reckon hit wuz, boss?"

"Can't imagine, Ches, what was it?"

"Nufen 'tall 'cep'in two ole he coons er fitin' dar in de rode, an' I des tuck en cotched 'em boff soon es I made out what dey wuz. An', boss, I wuz dat skeered dat hit knocked all de foolin' plum outen me. I wanted ter go home, crap er no crap, so I des flung dem coons on my shoulder an' lit out on de back track. 'Bout sum up I met ole marster an' de oberseer at de foot ob de mountain. Ole marster 'lowed, 'Whar yer bin, Ches?"

"Bin coon huntin', marster!"

"Coon huntin', yer brack raskil! Yer bin gone two days an' heary yer es forty mile from home."

"Yas sah, marster! Yer see de dorg kep' er trailin' 'n' trailin', an' I kep er guine, twel I cotch 'em 'bout mid-night las' night."

"Whar yer strack dat trail?"

"Down in de bottom by de horg pen, marster."

"Look heary, nigger, how dem coons cross dat riber an' hit a mile wide?"

"I ain't dun think erbout dat, boss, an' I des had ter stop an' scratch my haid fore I 'turned de answer. 'Yer got me dar, marster; I des 'lowed ter ast yer dat, when I got home."

"Ole marster laff at dat, he did, an' he neber let dat oberseer strack me narry lick, sah; narry single lick; but he up tole me ef eber I foler er nuder coon 'cross dat river he'd lam me plum home."

During this recital the "parsen's" hooks had many a bite, so many in fact that he developed sufficient energy to go upon a collecting tour around the pond, and the harvest he garnered increased the length of his string to more than a yard, and sent his enthusiasm up to a hundred in the shade.

"I des tel yer, boss," he exclaimed, exultingly, "dese niggers goes fishin' an' goes fishin', but I beats dem all."

"Dat's de truf, parsen, dat's de truf sho," said the woman who had rescued the cat, "an' I des mirates how yer does it. I bieves yer cunjurs wid 'em."

"I ain't got er fish, nary single fish," chimed in another "sister" who had also overheard the "parsen's" boast. "Does yer spit on yer bait, Sis' Ann?" asked Ches.

"In co'se I spits on my bait, an' I rubs camfire an' asfedity on my hook, too," replied Sis' Ann.

"Anybody step ober yer pole?"

"Yas, parsen; dat triflin' blue gum nigger Sam, he so figity, he step ober my pole when I fuz 'cum."

"I 'lowed sumpin' done spiled yer luck—Dar! yer gittin' er bite now! Run, Sis' Ann, run!"

Sis' Ann made a frantic rush for her pole, and then she gave a jerk that brought the quinine bottle stopper, that served her for a float, out of the water with a report like a yacht cannon, and sent the poor little cat that so unfortunately nibbled 20ft. into the air, tearing the hook from his mouth and allowing him to fall back with a splash.

"Never mind, Sis' Ann," said Ches, consolingly, "de 'postle Paul see, 'Unto dem dat hab shall be giben, but I'm guine to 'verse de tex' an' gib yer mos' ob my leetle ones when I quits."

"Come Ches," I said, "divide with Sis' Ann, and let's go home. You can have my fish; I don't want them, but I've had fine sport, and will come with you again some other June."

GREENBRIER, Ala.

## "Forest and Stream's" Yellowstone Park Game Exploration.

No. 6.

### MIDWINTER IN THE MOUNTAINS.

THE morning following our first night at the Cañon was bright and clear, thermometer 2° above zero. John Folsom went upstairs to see about something and took his skis along. He found it easier to slide out of the second story window than it was to walk down stairs. The snow was 25ft. deep on one side of the house, and its level at the lowest part caught the downstairs windows at about the middle. Back of the kitchen a great drift 10 or 12ft. high rose up sharply and we had to cut steps in that to get over it. Every way from the hotel the sheer white covering sloped sharply down in steep rolls and pitches of descent. To the falls of the Cascade Creek, at the bottom of the hill, was a good mile. To the left of that point the black line of timber swept, and down in that somewhere was the Grand Cañon of the Yellowstone. From the hotel top we could see away across the Cañon, could see the steam of the Falls, and that of the geysers beyond the river, the latter rising white and sharp in the winter air. To the southwest we could see out over the Hayden Valley, and with the glasses could see that it was storming in the valley, the snow blowing in blinding drifts. We could see the direction of the great natural game trail across the Park, which the elk follow in going from the Hayden Valley to the Soda Butte country in the northeast corner of the Park. Folsom showed me where the U. S. troops in the Nez Percé pursuit crossed the Yellowstone, warping their wagons down into the gorge by ropes. Some of the trees that were skinned by the ropes can still be seen scarred up to today. To man unskilled in mountain travel it would seem impossible to get any sort of vehicle through here.

### Nature's Cold Storage for Thrills.

The Haynes party were expected to arrive that day from the Lake, and Billy started out to meet them on Hayden Valley, hoping to join forces and locate the buffalo. He went quite alone, not a very desirable thing to do in that climate and country. I wished to see the

Cañon and the Falls, so took my camera, and accompanied by Folsom, Larsen and Holte, put in the morning along the wondrous Yellowstone, a privilege which has been accorded few travelers of all the world under conditions such as these.

From the hotel to Lookout Rock, below the Grand Falls, the distance may be something like a mile, for the most part a rather easy slide on the *skis*. After the first run to the edge of the timber we worked along the little hills, through the straight young pines, till we came to what seemed to be a sort of trestle or bridge, over the gulch near the Point. This was all covered 10ft. deep under snow. From that point to the jutting crag known as Lookout Rock there was a succession of gigantic and irregular drifts of snow. Folsom went all over this calmly without taking off his *skis*. I confess that in the worst places I dismounted and went over on my hands and knees, with my hands in the toe straps.

Lookout Rock we found to be a great white heap of snow, standing out over the fathomless and unthinkable depth of the cañon. What the footing was we could not tell, but supposed it must be solid out to where the ragged tree was standing on the verge, so we trod a way fast deep out to that, and stood silent in full view of one of the wonders of the world.

I suppose thousands have stood grasping the stem of that same sturdy, ragged tree, and have looked in silence as we did. They have seen the Cañon in summer, and I wish they might all see it also in the depth of winter. Now the glorious colors of the walls were gone, but the peaks and cross and pinnacles were there, free of all color, but done in a clean, perfect white. It was "frozen music"—the diapason of nature's mightiest and most mysterious anthem all congealed in white, visible, palpable, authentic. No thinking man could stand there and not feel the exalted and compelling theme go thrilling to his heart.

Against the monotone of the snow the evasive blue-white clouds of steam arose from the little hot geyserettes along the river's brink. Above us the great veil of white-mist which shrouds the Great Falls by winter shifted and swung and halted and paused and towered as the wind said, rising high up to the level of the forest. The ice bridge nearly spanned the Falls at the time of our visit, and down both sides of the Falls, wherever the spray struck the clinging snow, there were broad columns of ice, which at our distance, looked white and dull, but which close at hand must have been prismatic, radiant, glorious in the bright light of morning. It would have been worth one's life no doubt to risk the descent into the Cañon, as a snow slide would have been almost certain. We therefore made the photographs from the ragged tree, whence I suppose thousands of Kodak shots have been made by the summer tourists. The white of the Falls and of the mist made a difficult subject against the white background of the snow at so great a distance, and I got only an indifferent view, partly for reasons which I will later on set forth. There are many fine summer negatives of the Falls extant, but I believe the finest amateur negatives I have seen were made by Dr. Gandy, post surgeon at Fort Yellowstone. Dr. Gandy has put some of his beautiful Park negatives at the service of FOREST AND STREAM, and they speak highly of the possibilities of this pleasing art. I am not sure that Mr. Haynes got a winter view of the Falls on his trip, but if so, it was of course good. I know of no amateur negative made in winter except the one we got that morning. There was so much snow piled up on the edge of the Lookout Rock that it was difficult to get a shot down into the Cañon. I made one or two exposures over the edge with the others holding on to me for safety reasons, but had meagre luck of it.

Leaving Lookout Rock, we skirted along the river hills and went up the river about a mile and a quarter or more, to a point directly above the Upper Falls. Here we could see only a blinding steam of mist coming up through the reverberant roar of the cataract. The masses of snow kept us from going very close, but we were able to see down into the caldron of the Falls. Of the rapids above the Falls we had a beautiful view, and I stopped to make some exposures here, of course, though it was coming on cold and windy. Here, after a shot or two, my camera, which had been working very badly all the morning, broke down entirely, the film tearing clear across, for the second time already on the trip. Nothing was left but to quit and go home. Folsom told me we could get up a dark room, and I thought perhaps I could tinker the camera into something like shape.

It took us something like three-quarters of an hour to make the mile climb from the Cascade bridge up the Cañon hill to the hotel. It goes slow on *skis*, and I imagine there are folk who couldn't get up it in a hundred years. It takes about two or three minutes to come down, according to the condition of the snow.

We all had rude appetites, which John Folsom proceeded to appease in the small but cosy kitchen. Water we got out of a barrel full of melting snow.

Re-enforcements Arrive.

At 3 P. M. heavy snow began to fall. At 5 P. M. Billy got in, and I was glad of it. He had not met the Haynes party, and had *cached* his camera in the woods in Hayden Valley. At 6 P. M. the Haynes party, Mr. Haynes and two men, Sergeant Morrison and Bobby Burns, a Post attaché, got in, all in fair order except Burns, who had lost his glasses and was suffering badly from snow blindness, the black handkerchief he had worn across his face below his eyes not having been efficient. Billy told him to keep a hot-water compress on his eyes, and by morning he was much better.

Not an Easy Job.

Mr. Haynes reported only fair luck at photographing game, as he had met a great deal of stormy, cloudy weather. It would seem a simple thing to go right into the Park and begin to photograph buffalo and elk, but it is really extremely difficult. One must first locate the game. Second, he must not let it get sight or scent of him, else it will stampede and leave the country. Third, he must have a clear day or he will get no sharpness to his pictures. Added to this he must have a long distance (or narrow angle) lens, and lastly he must have a combination of ready skill and ever-present good luck, for the chances come only for an instant at a time. Let any one undertake to arrange this combination, at the end of a 50-mile *ski* tramp with a heavy sack on his back, and he will learn a great deal about the difficulties of this task.

Mr. Haynes had hard luck at the Lake, and had traveled 60 miles for nothing trying to get a picture of the poacher Howell's tepee and cache. Troike, the private who attempted to find them, was unable to do so. I offer this as one more instance of the incredible difficulty of patrolling this tremendous country in winter. This man had been with Burgess when Howell was arrested and was supposed to be able to go back to the place. A fall of snow came and he was three days in finding it, do his best. How about setting out for a 75-mile jaunt on *skis*, and under pack, to find a poacher no one has seen or located? When people talk to me now about how "Capt. Anderson ought to be able to stop all the poaching, with two troops of soldiers and nothing else to do," it makes me hot clear through. Such people have no idea what they are talking about. It is easy to be wise and critical with your feet on a stove. Stick them into *skis*, and turn yourself loose in the Yellowstone Park in winter, and I'll bet a thousand dollars to a last year's banana peel that you think a whole lot different.

Game in Sight.

Mr. Haynes had seen game as mentioned below: On March 10, 2 buffalo, 6 foxes, 48 elk, all on the Hayden Valley. On March 13, 1 bull elk, 1 cow elk, 23 elk in herd, 31 buffalo and 6 buffalo, all on Hayden Valley. On March

MR. JOHN FOLSOM IN A SKI POSE.

14, 1 black fox, 1 red fox, 3 mink, on Hayden Valley. On March 16, 19 elk, 2 foxes, 6 buffalo, all on Pelican Valley (where the Howell killing was). On March 17, along the Yellowstone, he saw 12 swans, 18 foxes and about 300 ducks. (The Yellowstone does not freeze.) Billy and I had not yet gotten into the winter game country, but we were now right upon the edge of it.

We all concluded to join forces for a day or so in the matter of trying for big game photographs, so that we would not hurt each other's chances by frightening away the game.

Mr. Haynes used a simple 5x7 box—a Waterbury, if I am not mistaken—but he had a \$125 Ross lens, and he went to all the trouble—a very great one—of taking in glass plates, which he said far surpassed any film. He got beautiful results, and thus added largely to his perpetuation of the beauties of the Park, whose skilled and tireless

BILLY HOFER WAXING UP THE SKIS.

artist he has been for years. He expresses himself satisfied, as well he might be, with the results of his first attempt at photographing wild game. I spent a time to profit in a talk with him in the hotel kitchen the evening of his arrival at the Cañon.

Valuable Advice To Amateurs.

"It is a very common mistake of amateurs," he said, "to think they must always have the sun at the back when making an exposure. If you get to one side and catch the shadows, you get a Rembrandt-lighted picture which is much prettier, not so hard and with proper contrast.

"Now, if you try to photograph a geyser in action you will get nothing if you make the picture with the sun at your back, because you will have no contrast between the steam and your background. But you make your exposure right square against the sun and the light shining in against your cloud of steam will give you a contrast and you will get a sharp, clear negative.

"Another common bugbear of amateurs is the question of focus. Now, with the right sort of lens, you don't need to bother about focus. I never touch my lens, and it cuts sharp and clear at any distance from 25 feet to half a mile. It will get relative distances and perspective into a picture. Cheap lenses will not do this, and they have to be changed in focus continually to avoid blurring the negative. Success with one of these must be largely a matter of success in guessing distances. It pays to get the best lens possible. Glass is better than film. One should get out of the habit of snapping at everything, but

wait till he gets what he knows will make a good picture. Then with a good lens, good plates and good care, he knows he has got his picture when he presses his button.

"Of course, a short-focus lens is quicker in action than a long-focus. If you narrow your field, getting a long-range camera, you get a slower lens. Yet with quick plates, I should think a machine made on the principle of Mr. Hofer's here, would be the best for this sort of work, where you don't want too wide an angle, but want size to your figures." (Billy had plates also for his machine, and used some of them.)

As Mr. Haynes is one of the best and best known photographers of the country, the above advice may be taken as *ex cathedra*.

Tried for Buffalo.

On Monday, March 19, Billy took Larsen and Mr. Haynes took Morrison, they going over on the Hayden Valley, six or eight miles, for a try at the buffalo. As was feared, it came off stormy, and they got no pictures. The shoeing was sticky and very hard.

Progress in Ski Theory.

By this time I was beginning to study into the theory of *ski* running still more deeply. I had noticed in coming up the great Cañon hill, which was largely a case of "corduroying," that the heels of my *skis* hung lower than the toes, and so were always dragging down behind in the side-step. I held a consultation with John Folsom, and the result was that we cut 5in. off the heel of each of my *skis*, set the straps back 3in., and planed off a lot of useless wood from the tops of the *skis*. We took off about a pound in weight from each shoe. After that I noticed a startling improvement in my ability to get up hill. It is only by experience one learns.

I noticed that Folsom's *skis* were of ash, but channeled and worn thin by several seasons of hard use. Folsom told me that Norway pine made the best shoes, as they did not stick like ash, though they were apt to be brittle if made too thin. Hickory, he said, made fine, springy *skis*, with good grain, but a trifle heavy. Ash was pretty tough and light, but needed more care in waxing. The best wax for shoes was made of tallow and beeswax, but if you get in too much beeswax, you would get your *skis* so slippery and glassy that you could hardly use them, especially in going up hill.

Eight Miles For Fun.

On Tuesday Billy was tired and his sore heel hurt him, so he curled up on the bed in the kitchen and read a novel, declaring that he had had enough of travel for awhile. All the rest of us except John Folsom went out for some fun on the *skis*. The thermometer continued about zero, which temperature seemed pleasant. The snow was in good order and we had a good run, doing perhaps eight miles or more for the fun of the thing. We had a good run down the Cañon hill—fortunately not running off the trail at the sharp angle near the bottom, where even so good a shoer as Folsom has failed to get around and narrowly escaped a headlong plunge into the depths of the ravine below. We then crossed Cascade Creek, with its beautiful falls, hurried out of sight under the snow, and followed the Hayden Valley trail out for a mile or so, to a place where the mountain slopes rose up high and bare, offering a good place for a long and swift *ski* run, which was what we were after. We worked up the slopes for a mile, perhaps, getting as high as we could, and going forward all the time, until we reached a high peak or point,

bare of timber, and swept with a keen wind, which packed the snow almost into ice. Below us lay the level of the valley of the Yellowstone, and on the bank of a little creek we could see far below us a little cabin, built for the summer use of the troops, and now just visible above the level of the snow. The leaders of our snowshoe brigade thought it would be a good thing to jump off the earth from the top of this bare peak, and land somewhere down there by the cabin, three-quarters of a mile or more. For my part I was not enthusiastic over this proposition, but by this time was getting sort of resigned. One after another dropped off over the edge and shot down, and, holy mackerel, how they did fly. A man seemed to condense and shorten up like a telescope as he sank down and down, instant after instant, so that he wasn't over half size when he reached the foot of the hill. When I let go I had no definite idea of what was going to happen, but as I wasn't particular where I went it didn't make much difference anyhow. Again I experienced the exhilaration of the astonishingly smooth and easy motion of the swiftiness of which the *ski*-runner himself has no just conception at the time. To my surprise, I kept in the tracks of those ahead and arrived all standing, with only the temporary disgrace of having "ridden my pole" on the last sharp drop, at which there was loud protest from the others. Then we all went in for *ski*-jumping for an hour or so, making a lovely jump out of a snow drift on a steep hillside, so that we could clear 30ft. or so. At this we found our Scandinavians, Larsen and Holte, easily superior, they having had long experience in the winter games of

Minnesota and Wisconsin. In *ski-jumping* the jumper does not carry his pole, as he would almost certainly injure himself in landing after the jump if he kept hold of his pole. It is a matter of nerve and equilibrium. Most of us seemed a little shy on the latter, but we kept on jumping till we were all in coats of white and a glow of heat from head to foot. Then we went home and ate John Folsom out of the place.

#### Off for a Camp on the Valley.

The next morning, Wednesday, March 21, was keen and cold, below zero. We all joined forces and started for the Hayden Valley, feeling that it would be better to get closer to the game, in order to take advantage at once of any bright weather suitable for photographing. (The light in that country at that altitude and in winter, is about 20 per cent. "faster" than in this, and is fine for instantaneous work on any clear day. Such a day is, however, rare in winter, and when the snow is falling and the clouds are dense, the light grows too dim for one to think of photographing, as at best one could not get a picture with any sharpness or "distance" in it). We concluded to make a camp somewhere on the Hayden Valley, and to act from there as headquarters.

It was with feelings of the liveliest interest, one may be sure, that after the sharp five miles or more of *ski* work across the hills between the Cañon and the Valley, I turned from the Yellowstone with the party, crossed Alum Creek, and made out toward the middle of the broad, white, dazzling expanse of the Hayden Valley. Here we were no doubt to determine the success or failure of an important part of our work. Somewhere, behind some of those long tongues of timber which pierced the five miles square or more of open whiteness, there were without doubt numbers of the greatest and the rarest game of the American continent, which we had come so far to see at home on the winter range, and to enable others to see, if we might be so fortunate.

Billy and I went on up to the point of timber toward the middle of the valley, where he had cached his camera two days before. The rest of the party kept on up Alum Creek a little further, it being the understanding that they were to make as good a camp as they could in the timber or some one of the slopes making down to that stream. It was still early in the morning of what was to prove a very eventful day, followed by a night not less so.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

#### STORIES OF EZRA.—IV.

##### A Yankee Trick.

ONE Sunday Ezra proposed that we go and spend the day with John and Mac. They lived on Baby Ridge, some three miles west from town, and as we walked through the woods Ezra said he was going out there to get even with Mac for "riling" him so last fall down in Adair county. He had formed no plan for getting even, but was confident that he would find some opportunity. There was no one home but Mac, and Ezra told him we had come to get him and John to join us on a fishing trip to Spirit Lake. Mac said he could not go, because he had to work.

"What has work got to do with it," said Ezra. "The chief end of man is to shoot and fish. It's all well enough for a man to take a little recreation at work when there's no shooting or fishing, but the man who neglects to improve opportunities for enjoying either of them don't live up to his privileges."

"I have to work for a living," said Mac, "and don't see how it is that you fellows get along without working more than you do."

"Make it by practicing Yankee tricks," said Ezra.

"Well, if there is any money in it I'd like to know a few such tricks myself," said Mac.

"I'll teach you a good one if you will promise to go with us to Spirit Lake," said Ezra.

Mac promised to go if in his judgment the trick was a good one, but Ezra declined to teach him the trick till after we returned from the trip. This did not suit Mac and they argued the matter until the consuming desire of Mac's mind was to know the mysterious trick. Finally, Ezra agreed to teach him the trick before we went home, and bound him with many solemn promises never to divulge the secret, nor even to let any one know he was in possession of it.

After everything was arranged Ezra still hesitated, saying he feared to let such an important secret go from his possession, but Mac by this time felt that he could not live another hour without knowing the mystery and begged so hard that Ezra relented. He asked Mac if they had a barrel of vinegar in the cellar. Mac said they had. And a small auger? Yes, there was one in the woodshed. "Get it and we will go to the cellar," said Ezra.

When we got down the cellar Mac was again sworn to eternal secrecy, and was then told to roll the barrel out into the middle of the cellar. Then Ezra bored a hole in the end of the barrel and told Mac to put his finger over it to keep the vinegar in. Boring a hole in the other end of the barrel, he told Mac to put a finger over it too, while he went up and got a couple of plugs to put in the holes. Leaving Mac stooped over the barrel, with a finger of each hand closing a hole, we went up-stairs and home. Ezra said, "I've never known Mac to keep a secret for ten minutes after he found somebody he could tell it to, but I think he will probably keep his promises this time." And it was evident he did keep it, for, a few days later, Mac's father met Ezra and me on the road and asked whether we had noticed anything unusual about Mac. We told him no, and asked what was the matter.

"Well," said the old gentleman, "last Sunday all of us but Mac were away from home; and when I came back, about four o'clock, Mac was down the cellar holding his fingers over a hole bored in each end of a barrel of vinegar; and not a word would he say about it, except that if I ever mentioned it to anybody, he would go where none of us could ever see him again."

Of course we expressed surprise, and asked a number of questions that might be supposed to bear upon the case, finally suggesting that it might be best not to mention it to any one. Mac never mentioned it to us, nor we to him, but it was noticed that his curiosity was harder to arouse than it used to be.

O. H. HAMPTON.

## Natural History.

### AN ADVENTURE WITH A SQUIRREL.

SHASTA MOUNTAINS, California.—In my mountainous realm I have a small garden and a colony of ground squirrels occupy premises adjoining it. The rodents reside in a pile of saw logs, and have been so prosperous and thrifty as to increase both in numbers and energy until it is now a crisis. It must be either fewer squirrels or no garden. The fittest must survive and I am the court. I say cabbage, peas, corn and potatoes. I enforce my judgment with ordinance, and this morning I popped over the most opulent and defiant rodent I could select.

The squirrel was sitting upright on the end of a log when I blazed away, and with a last defiant *quitchet* he kicked up his heels. I proceeded to get him for the cat, and thought as I went that he was so fat I would quarter him and give my dog a portion also. The log was nearly covered with ferns and I looked around the end of it for some time without finding my victim.

I reached down at my feet, and bending some ferns aside almost grasped a huge rattlesnake. He was coiled in a snug coil, and although I had stepped close to him a number of times, he gave no warning nor moved away; his head was raised and he was in a "striking" attitude. He was so near the color of the ground I might not have noticed him but for the white line beneath his jaws and throat. As it was, I was about to reach for him, thinking he was the squirrel.

As soon as I realized where I was and what he was our sociability ended. I still held my gun, and at the distance of a few feet, I immediately fired upon his works. The shot severed his head with about 5 in. of his person attached to it. To show that he was lively and not either asleep or dreaming, the head, with the fragment attached, actually squirmed along 4 ft. and got under the log, while the other portion writhed very actively, but did not rattle. After some moments I got a stick and drawing out the main part of the reptile, cut off the rattles, 13 in number. As I did so the headless body reared, coiled and uncoiled as it tried to strike. I got the head from under the log and noticed that it became motionless in a few minutes, while the other portion continued to squirm until I left.

The dart-shaped head was evidently supplied with all the appliances of a well-equipped rattler. I noticed that the eyes were unusually bright and clear, and that the pupils of the eyes resembled very much those of the cat, their centers being oval and perpendicularly placed. The fangs were also in proper trim and clung to the stick with which I investigated.

Now, this snake was probably lying in wait for a squirrel, but I believe he was ready to strike me, and I know he did not once sound his rattle. I might take a selfish view of the value of snakes from the fact that this one was trying to decimate the enemies of my garden. I will not, however, form any alliance with rattlesnakes for that reason. I will continue to smite them and bruise their heads. I will use my influence to offer bounty for rattlesnake scalps. I believe it would be a relief to many people if they were extinct. I have killed many of them about my immediate premises when in the mountains, and have found them in the house. They are a constant menace to life and a constant source of fear to many people in summer. Hardly a summer passes in this State without recorded deaths from rattlesnake bites. Many would find more pleasure and benefit in outings if not for rattlesnakes.

RANSACKER.

### SANCHO, THE CULPRIT.

"PLEASE stop a minute, auntie," piped five-year old Alice from the shade of the cherry trees near the farmhouse, "I want to show you something. Be careful when you lift the cover and don't let him jump out. He pretends to be asleep, but he is just as alive as he can be."

"What can it be, a bird or a kitten?" asked auntie, reaching down from the low phaeton and taking a small covered basket from the wee girl's chubby hand.

"Won't you guess and see if you guess right, auntie?" "Oh what a funny little pointed-nosed creature. Is it a bright-eyed fairy in black kid gloves and fur cap and cape?"

"I didn't believe you could guess. Cousin Frank says it is a baby woodchuck. He caught its mother in a trap to-day, and this little thing had five brothers and sisters all following their mother through the clover; just think of that."

"What a pity to kill the mother of such an interesting family."

"Yes, only you see, auntie, she was so fond of beans and lettuce and sweet peas, too, she ate them as fast as they came up. Cousin Frank is up in the clover field now looking for the rest of the family; he wants to adopt them all."

"Can a woodchuck be tamed?"

"I dare say not," replied Alice's father who had strolled out and stood with his elbow upon the gate post, "and they would be even more objectionable than rabbits as pets, but everything in the way of fur is desirable these days, and much of the trimmings, called by fancy names, was once the property of little kid-gloved fairies like the one in the basket."

"That is a new fact in natural history as well as in popular fashion. I was not aware that the woodchuck was so dark-colored or that he had so many black hairs in his coat."

"That is the very thing that makes the young ones worth saving, although I suspect not many experiments in this direction are made by amateurs, but my father having been a practical tanner and dresser of hides, I intend, another winter, to clothe my family in real Arctic style if I have good success with the skunks and weasels and fox pelts I have already, and with those whose habitats I have spotted, and shall secure at a seasonable time. To be honest, this idea opened itself up to me last winter, when my women folks were paying exorbitant prices per yard for little strips of skunk skin; I told them to wait a year and we would have all our garments, even the buttons of my Sunday trousers trimmed with fur. It is not necessary for little people, however, to so early solve the problem of demand and supply; the sacrifice of the pretty wild creatures grieves their tender little hearts, but next winter in New York, when you are looking at fur goods at Lord & Taylor's, and are shown the very

desirable marmot, you will think of this gratuitous lecture and, perhaps, be able to profit by it."

"No doubt. Please accept my thanks, I have been very much interested; at least, but what is Sancho doing out there in the tall grass, what has he in his mouth?"

"He is solving the problem of supply and demand by taking a beeline for home with that woodchuck. Here Sancho, you rascal!"

"Isn't he a picture now, going stealthily and holding his head high so the basket shall not drag?"

And isn't he a picture now, as the slim, trim beagle finding himself detected, dropped the basket and skulking back to the carriage with an injured air stretched himself again by the horse's feet to listen to the conversation?

"Are those baby woodchucks up at your house, auntie?" asked little Alice the next morning, running out as the familiar horse and carriage were driving past to the post-office.

"Cousin Frank had all six of them in a box together when I went to bed, but this morning they are all gone. I thought, perhaps, Sancho wanted to adopt them and came after them in the night."

Auntie glanced inquiringly at cousin Frank, who was smoking under the cherry tree, and he replied, "If the pelts of certain animals are soaked in a certain chemical solution, it fastens in the fur and toughens the tender skin. Is there any harm in allowing it to be tacitly understood that your little dumb friend and constant companion is the culprit?"

"What is a culprit?" asked Alice, curiously.

"A dog who steals a baby woodchuck and carries it away in a basket."

"Oh, that was Sancho," nodding her curly head complacently. "I saw him myself."

ANNIE A. PRESTON.

WELLINGTON, COBB.

### The Rains and the Birds.

HAINES FALLS, N. Y., June 15.—The long period of rain which ended here a week ago, was very destructive to young ruffed grouse, one single woodsman having discovered three broods of dead chicks. There were two hatchings of young ruffed grouse here—under domestic fowl—one of 11 chicks and another of 5, but the continuous wet weather killed them all. We all hoped better results from Mr. Rusk's experiment, for the birds looked well.

CHARLES HALLOCK.

## Camp-Fire Flickerings.

"That reminds me."

### The Velocity of Shot.

QUITE an amusing little incident happened to a party of hunting men in the fall of '92, while we were en route to the "Meadows," a beautiful strip of land lying between the Dan and Smith rivers on the border of Virginia and North Carolina.

I had taken the only passenger coach which the little narrow-gauge road carries between Danville and Martinsville, in Henry county. I thought for a time that I would be the only occupant of this coach, which was partitioned off in the middle and one end used for baggage; but just before the time of departure arrived, there came a lot of men with dogs, guns and a week's supply of ammunition.

As I looked at these men I thought to myself, well; many a bird will tumble during this outing, for there wasn't a "dude" sportsman in the lot. No fancy clothes, but rough-looking, brier-scratched apparel which looked like "business" and not "show." It did not take me long to discover that the men inside of the frazzled garments were gentlemen, and leading citizens of the thrifty tobacco town in Virginia, and like all other good shots in our cities were born and raised in the country, and had "caught de hang o' de thing"—shooting on the wing—in their boyhood. I am the president of the Virginia Field Sports Association, and all of these men were on my "roll" as members, but they did not know me, while I knew them from the manner in which they addressed each other by their first names. The chief among them was Peyton Gravely, and as soon as they addressed him as "Pate," I had him spotted. A man who knows nothing about hunting (or the man who, like a great many people, thinks he knows but does not), on hearing the marvelous stories told by these men, would have pronounced the whole party "a gang of liars;" but an old stager like myself, who has been shooting since 1855 is something of a liar too, if the remarkable things which in a shooting experience of 35 years have happened to him are to be inquired into and voted upon by the fellows whose knowledge of the sport afield come from owning a high-priced gun, velvetine clothes, a dog that drops to shot and fur, and was never known to go out of sight or sound of whistle, a solid silver whisky flask, consult their watch every ten minutes to see if it ain't about time for lunch, and bathe their feet in whisky if they should get wet, consider hunting "work" but must go because "the doctor tells me that I must take exercise."

When I had enjoyed for a time the amusing stories which one and another of these practical sportsmen had told, much to my edification, I did what is characteristic of Virginians when traveling among strangers—put in my word too—and in two minutes every man of them welcomed me into the fold, and particularly were they glad to meet their president, whose name was as familiar to them as any other in the commonwealth, for the annual dues were collected promptly and seemed (to them) to come around several times during the year.

There was a stranger in the car who had been a silent listener to all of the wonderful feats of marksmanship, exhibitions of dog sense, etc., as told by these sportsmen, all of whom had once owned a dog, "the like of which would never be seen again," and thinking this a good chance to settle a question which had long been puzzling him, he broke forth as follows: "Gentlemen, seeing that I am in the midst of a lot of old veterans in the shooting line, I want to ask you all a question. Do all the shot in a load, when fired on a dead level, travel with the same velocity?"

The response came quickly from a half dozen men, "Yes, of course they do, if they are all of the same size." Turning to me, some one asked what I thought of it. I told them that I had noticed, when shooting at ducks on the water, that although I aimed well, and the bulk of

the shot struck the spot aimed at, yet many fell short, and after my birds had turned over and were apparently stone dead, I had seen the water around and beyond the bird plowed up by what seemed to me to be straggling shot. The majority were of the opinion, however, that I was mistaken or that my shot were mixed.

The stranger listened to the discussion with a good deal of interest and then told us of an experience which he had that seemed to settle the matter to the entire satisfaction of us all. Said he, "I ain't no huntin' man, never went huntin' in my life till las' winter. But one day I was settin' on a store porch in a little country village in southwest Virginia, an' a fellow that I knowed purty well, he put at me to go bird huntin' with him. I told him I knowed nothin' 'bout shootin' an' that I could kill as many birds with a rock as I could with a gun, but it 'peared like he had done set his heart on my goin' with him; so to keep the peace I tuk the gun an' went 'long. The first covey o' birds we skered up went into a clump o' bushes, an' he says to me, says he, 'Now you go right into the left an' I'll go to the right.' We hadn't gone more 'n 30yds. in the bushes 'fore I heard a bird fly, an' he was a pint 'n straight at him. I never dreamed that the feller was a winter shoot, 'cause I thought sholy he could see as big a thing as me right befo' 'im, but he blazed away, and I'll be blanked if he didn't jes' fill me with shot. There's two shot now in my chin (here jes' feel 'em), two in my eyebrows (feel o' them, too), two went through my right ear, an' there's no less 'n twenty-five in the top o' my head that went through my hat. When I felt 'em hit me, I jes' hollered out, 'John, what in th' devil are you doin'? You've shot me!' Jes' as that las' word 'me' come out o' my mouth two mo' shot come 'long an' went right into th' root o' my tongue. Now, whar did them shot come f'om?"

Upon being told that there was but one shot fired, and that the ammunition was from the Chamberlin Co., and No. 8 shot, it was unanimously decided that "experience was the best teacher" and that we would take his word for it that they do not travel alike, and that we thought as he did about going hunting again—the next time we were asked to go out we would stay at home.

RICHMOND, Va. POLK MILLER.

## Game Bag and Gun.

### CHICAGO AND THE WEST.

[From a Staff Correspondent.]

#### Uncertain Laws.

THE other morning Col. Felton asked me if I "took out a license when I was shooting down in Arkansas." I told him I did not. In the *Game Laws in Brief* I find no reference to a license. Mr. Jas. Irwin and other Little Rock sportsmen informed me and have since repeated it that none was required. I know many outside shooters who never heard of any license in Arkansas, except, I believe, for the shooting and shipping of ducks. So near as I can learn, no license for non-residents is required. The usual non-resident State law is a spiteful local affair, and if observed would cut off the sporting public from the best grounds of the country. I am not sure that the sporting press wants to work this hardship, though it certainly favors the observation of natural game laws once passed. How about Arkansas?

Another State of doubtful laws is Wisconsin. Col. Felton said to me the same morning of the above conversation that he "had left the Horicon Club, of Wisconsin, because he could not bring his ducks out of the State and he didn't like to break the law." Yet thousands of ducks have been brought from the Horicon marsh by the club men and put in cold storage in Chicago. And now comes the warden of Wisconsin and says there is no law against shipping or carrying ducks out of the State, and that the export law applies only to venison. The *Game Laws in Brief* does not state that it is against the Wisconsin law even to ship venison. How about Wisconsin?

In fact, the game laws of this country are in a terrible jumble. It is too much to ask of one to keep them all straight in his head, and for one I do not pretend to do it. Whenever I go into a new State or section for sport I always look up the laws in the *Brief*, after which nothing. But how about these things? If I am shy a license down in Arkansas I want to take it out. Above all, I want to know, you know, how we are going to know about all these things. For my part, I am willing to stand on the accuracy of the *Game Laws in Brief*. According to this the Horicon men may bring their ducks to Chicago, and the Chicago man may shoot in Arkansas; two points worth remembering.

#### Friendly Woodcock.

Hon. J. G. Smith, of Algona, Ia., writes as follows under date of June 4, about an interesting bit of woodcock history: "Last evening, about eight o'clock, Mr. Warren, of the Upper Des Moines of this place, was sitting on his front porch when an old woodcock and three young ones, the young ones about half grown, came walking up the cross street and crossed our main street in front of his house. They were walking along like an old hen and chickens. To make sure that they were woodcock Mr. Warren caught one of the young ones. He let the young bird go again, and the old bird and the young ones commenced to make a squeaking noise and soon came together and went over the hill down into the river bottom. They did not seem to be at all alarmed, and were about as tame as a hen and chickens. The old bird flew a short distance when he went near her. It seems somewhat strange that a woodcock should come into the center of the town with her young, a town of about 3,500 inhabitants. Mr. Warren tells me he could easily have caught the whole brood. We are having very dry weather and the old bird was without a doubt looking for food."

E. HOUGH.

909 SECURITY BUILDING, Chicago.

\*There is no non-resident law in Arkansas, nor any non-export law in Wisconsin. Whenever such restrictions prevail they are clearly stated in the *Brief*.—Ed.

Communications for publication relating to business should be addressed to the Forest and Stream Pub. Co. If addressed to an individual they will be subject to delay in that individual's absence.

#### To Loot the National Park.

PENDING in Congress is an apparently innocent measure "to establish the boundaries of the Yellowstone National Park and for other purposes." It is the "for other purposes" that concerns every American who is opposed to the spoliation of the domain.

The ostensible purpose of the land grabbers is railroad improvement. Members of Congress are now being importuned with memorials setting forth the crying need of new lines and the evils of the Yellowstone as a bar to intercommunication. Thus arguments are found for tapping the Northern Pacific Railroad so as to carry a branch down into the Park itself and through the Valley of the Yellowstone, one of the few grandly picturesque regions left in the world. This railroad extension would then be carried up and around into Montana, with the result of cutting off a vast region from the Park itself. This region is then, by a supplementary act, to pass into the hands of the land speculators, and the Yellowstone would become a matter of history only.

The hollowness of the pretenses of the schemers is evident from the fact that the subject of railroad facilities with reference to the Yellowstone Park has long since been attended to. There exists now a "panhandle" through which a right of way could be had for a line of rails through the Big Horn and thence to Montana, thereby affording not only means of communication, but even cheaper transportation, besides saving the Park itself intact.

Chairman Faulkner, of the Senate Committee on Territories, together with his colleagues, Hill, White (California), Platt, Davis, Carey, Hainsborough, Call and Shoup, have all been approached in the interest of the land grabbers with arguments tending to show that the main utility of the Park is to keep numbers of hotel men prosperous. Of course, the hotel men do not like to see the beauties of the Yellowstone pass away, and it seems to be an interesting question as to which class of men will have most influence. But the real opposition is not solely from these hotel managers, as is claimed by the speculators. Naturalists, tourists and citizens generally are becoming interested, and it is probable that should the real situation become known the land lobbyists would fail in their efforts.

It is likely that, when the significance of the land grabbing bill becomes known to the scientific societies throughout the country, there will be concerted action for the prevention of the impending spoliation. But if enough members of Congress cannot be interested, it looks as if the American people will soon cease to be the possessors of a tract of which the value is beyond estimate.—Philadelphia Press.

#### Grassy Lake Hunting Club.

LITTLE ROCK, Ark., June 15.—We have added another game preserve to the rapidly increasing list. The Grassy Lake Hunting Club was organized here a short time ago, with W. H. Crookson President, and D. A. Gray Secretary. I was elected attorney and am living in the hope of a princely salary thereto attached sometime in the future. We have bought 640 acres of duck marsh, including Big Grassy Lake, Little Grassy Lake and part of Clear Lake, and Messrs. Gibb and Breysacher, architects, are drawing plans for the club house. We have secured one of the best marshes in the State, and while it is probably possible to kill 1,000 ducks a day on it for awhile, we do not propose to have any hogs in our crowd. We have by severe penalties limited the score to twenty-five ducks and two geese a day. We propose to inclose our land, plant it with wild rice, which will be an experiment as none has ever succeeded here; and we think we will have the finest game preserve in the State.

Fishing is said to be very good in Clear Lake and in parts of Big Grassy, but I have never tried it. The club house will be situated on a hill some little distance from the marsh, so as to be free from malaria.

The season has been very dry and the waters are very low. As a consequence, fishing has been better than it generally is in the spring. Some of our streams have been badly trapped and netted. It is impossible to secure any convictions under our fish law, for it is so loose that about all a court can do with it is to decide under which exception an offender shall be discharged. May be when all the fish are gone from the streams we will get a better one.

J. M. ROSE.

#### Deer in the Green Mountains.

RUTLAND, Vt., June 18.—*Editor Forest and Stream:* I have noticed from time to time accounts of the deer now growing so plentiful in our mountains, but I have seen no account of how they came here.

Fifty years and more ago deer were a plenty on the east side of Lake Champlain, and on the west side in the famed Adirondack wilderness; but over-hunting, especially in the wrong season, crusting and other objectionable modes did their perfect work, and the deer disappeared from all parts of the State except in the extreme northeast section, where they were able to maintain themselves in that denser wooded and less thickly settled section. The last deer which the writer recollects as having been killed in this section was about 1842, and it was considered a miracle almost then.

About fifteen years ago one of the keepers at the Dannemora State Prison advertised a herd of deer for sale, and a number of the citizens, sportsmen and others, of this place, conceived the idea of buying them with the intent of turning them loose in the mountains, to see if the State could be restocked. Most of the money, several hundred dollars, was raised here, but some was contributed from other sections. In all about 17 deer were obtained, and in April were turned loose to take their chances. A close season of five years was ordered by the Legislature, and the law was re-enacted from time to time till 1890, when it was altered to ten years, extending to 1900.

The experiment has been very satisfactory; the deer have increased even beyond our expectations, and I verily believe that there are as many deer in a tract of country fifty miles long and ten miles wide in the center of the State, as there are on any corresponding tract in the Adirondacks.

The citizens generally have taken great interest in the venture, and, so far as I know, very few indeed have been killed; personally I know of but two, and one of those I have reason to believe was not killed intentionally. A liberal reward was offered for information leading to conviction, but we have never been called upon but once; three years ago a deer was deliberately killed at 8 o'clock

one Sunday morning, and at 9 o'clock on Monday morning the offender commenced working a three months' sentence in the State workhouse. Not one of the contributors to the original fund ever expected to kill a deer in our State of Vermont, or wanted to; it was all for the benefit of posterity, but we vowed to fight tooth and nail before every legislature to keep the law in. Every year some fellow who never paid a dollar of the expense, but who has seen, or heard of a deer, is up with a bill for an open season. They cannot wait. If they could have their way, deer would be as scarce here in two years as they were before this stocking was attempted.

If I could have my way, none should be killed before 1910, but I presume we cannot stand the pressure after 1900, and shall have to allow a short open season.

VERDE MONT.

#### Bear and Mountain Lion.

THE following extract from a private letter recently received by a member of FOREST AND STREAM's staff gives some notion of the interest which attends one form of spring bear hunting in the Rocky Mountains. The writer says:

"I have been hunting bear and traveled on an average twenty-five miles a day since April 15. Of course, you will ask, what success? Well, I have killed four bears and five lions since April 15, and I have chased about a dozen bears off this part of the continent. I am hunting with dogs, and while they are dead medicine on a lion, they don't take kindly to rare bear. They have stopped two that I have killed and may improve, but just now I can't blow on them to any great extent.

"All the bear I have killed are black, and they were bred for speed and endurance rather than for fighting qualities. When you follow a bear for forty miles, and then pack the green hide on your back fifteen more to camp, and travel over down timber and often on snowshoes, you can form some idea of the sport I have had.

"But the season is over and I am again a quiet granger. The grass is green; horses are fat; mosquitoes and flies are plenty and the weather is warm. I sympathize with a man who in the pursuit of fame and fortune shuts himself up in a great city and lives like a Christian. I believe though that we are all more or less savages, and while we may live it down for a while nature will finally get the better of judgment, and sooner or later you will have to take to the mountains. I am sorry to learn that you gave out and went South for change and rest. You should have come West, and run lions on snowshoes. You would have found plenty of change, but very little rest.

"I am making arrangements for a hunt this fall on a large scale. I shall look for bear and trap martin. Could you not join me during October, November and December? This work does not require any great mental exertion and it is a little more than self-supporting. We won't get rich, but appetite! you can get a wealth of that."

#### Illinois Game Notes.

JERSEYVILLE, Ill., June 18.—I have inquired of a number of farmers from all sections of Jersey county in regard to quail; they all report old ones in abundance but no young ones have been seen yet. As we have had a very dry season so far, there is every prospect of an abundant supply of birds next fall.

J. M. Page, editor of the *Jersey County Democrat*, and a member of our shooting and fishing club, has received an offer from Mr. A. B. Harding, an employee of the Santa Fe Railroad at Canadian Texas, to ship him a brood of Mexican topknot quail. Mr. J. T. Grimes, residing two miles west of this city and owning several hundred acres of good quail ground, has kindly offered to look after them and see that they are protected on his land. The question is, will they thrive so far north of their native home?

Squirrels are reported numerous in the timber a few miles west. It is lawful to shoot squirrels in Illinois after June 1, and the law has been generally observed here. My son Walter has been out three times with his .22 Stevens and has bagged twenty-three, all young, about two-thirds grown.

Considerable sport is had here with the .22, shooting young rabbits along the roadsides from a buggy. The rabbits come out of the fields in the evening to play and wallow in the dust and are then an easy mark.

I am afraid that trap shooting has seen its best days here unless new life can be infused into it. Our club members seem to have lost all interest, yet we have some good shots among them.

L. S. HANSELL.

#### Indians Abated, But Elk Runners at Large.

CORA, Wyo., June 12.—*Editor Forest and Stream:* The Upper Green River, Star Valley and Jackson's Hole people have cause to rejoice over the fact that the Fort Hall and Shoshone Indians are to be kept on their reservations in the future. The settlers have worked hard and persistently for this result and have justly earned a victory, through their representatives at Washington. I am in receipt of letters from the district attorneys of Fremont and Uinta counties in which they say they have positive assurance that we will be troubled no more with their depredations. At the same time they ordered the constables in the several precincts to arrest all roving bands of Indians and bring them to the county seats for prosecution.

Elk, antelope and deer are quite plentiful and are not being molested while rearing their young this year.

Now, if "Mountaineer" will push his plan of stopping the capture of elk during the winter and spring months and have that become a law I think he will be the means of preventing the destruction of thousands of elk that are now being run by grain-fed horses until many drop dead. It is estimated by men who are in a position to know that not one out of ten so captured survive to reach the corral.

IRA DODGE.

[We should like the facts and statistics of this live elk capturing business.]

## Sea and River Fishing.

### FORT MYERS TARPON SEASON, 1894.

THAT the Caloosahatchie River in Lee county, southwest Florida, is the home of the tarpon and the place in all the world where the great fish takes the bait most readily, is demonstrated by this year's record of the Fort Myers fishing, which reached me yesterday.

In 1887 the first advancing wave of fishermen reached the salt waters of Charlotte Harbor, and caused the erection of a most charming little hotel—the San Carlos—on Pine Island, near the mouth of the harbor, and did not spend itself until the year 1892, when the comparatively few fish in the various ponds near that hotel disappeared. Even the patience of a tarpon fisherman can in time be exhausted. These people, however, were not content to see their sport destroyed, and in 1890, taking the hint from certain small creeks which they had stumbled on, and which yielded fish, tried the great Caloosahatchie River, which empties Lake Okechobee into the Harbor, and has a length of over 100 miles, and for the last 24 is salt, and is from half a mile to two miles wide. The pretty village of Fort Myers is near the head of this broad part of the river, which ends at the northern or eastern end, at "the jetties" and the Beautiful Islands. These adventurers found the fish obdurate, and tarpon fishing among the initiated and their subinitiated was transferred to Myers, which has now become the headquarters for those who pursue the fish.

The growth of the pursuit is shown by the figures of the record, which has been kept zealously and with tolerable accuracy by W. R. Washburn, the local Poo-Bah of the place—town councilman, cigar maker, newsdealer, stationer and book seller, tackle dealer and barber. The fish taken were: For 1891, 152; for 1892, 200; 1893, 233, and 1894, 416, to which I have added 3 taken by others during my five days' fishing last March, which did not find a place on the record. I have no doubt no less than fifty fish were taken which were not recorded—probably a good many more.

The record for 1894 has just appeared and covers a whole page of the local paper—the Fort Myers Press—and shows facts which will be of interest to those who annually visit the region. Its abstract is that the number of successful fishermen was 87, of whom there were 6 women who took 16 fish. The longest fish, 7ft., was taken by Arthur M. Mitchell; the heaviest, 192lbs., by J. H. Stevenson. In January there were taken 3; in February 3; in March 65; in April 302, and in May 46. The names of the captors with the number of fish taken by them are:

These people are from all over the United States, with a fair sprinkling of the ubiquitous Englishman, and represent every profession and trade. There is none of them who does not expect to return to the pursuit another season.

Last March, at the end of a two months wandering in the West Indies and Mexico, I took a side excursion to my old haunts about Charlotte Harbor to take a tarpon, and spent five days fishing for him at Fort Myers. One day I wasted on an old ground opposite the village, and had no strike. The other four days I had two strikes each day and saved two fish, the largest 6ft. 6in., weighing 134lbs. This latter fish was taken on the last day of my stay and at a place I had never before visited. I had heard from a Sunday school picnic party, which had been "up the river" about thirty miles, that the tarpon could be seen from their steamboat in countless numbers, and therefore, with two companions and the appropriate guides and small boats, I chartered a steam launch and went up the river until we struck a school about six miles above the village. We found the water alive with the fish. During the time we fished—from 10 o'clock until 3—there was not a moment when from one to fifty fish were not visible on the surface. Abundance of fish in sight by no means insures fishing. The tarpon is a surface fish, and I doubt that he pays much attention to what lies on the bottom. I watched with keen interest squad after squad of these glorious creatures rolling by my boat—often so near that I could have speared them—showing in the sunlight that beautiful rosy glow which I have observed only on the unharmed fish, as their gleaming sides emerged from the surface of the river, a brilliant hue which disappears into opalescent paleness when the hook drives them mad with terror.

My companions anchored in the middle of the stream, while I placed my boat so that I could cast under the shore in front of the "wallowing herds" which moved along close to the bushes. In ten minutes one good fish followed my bait to the bottom and ran out half my line and then leaped at least 5ft. clear of the water, following it immediately with the grandest effort I, or my boatman, ever saw, fully 15ft. clear of the surface. I had him in 19 minutes, after he had made 20 leaps. This was my largest fish of this season.

I have read with interest the attempts to boom Texas as a tarpon resort, which have appeared in FOREST AND STREAM occasionally the past season. I have seen no communication as yet as to these new resorts from one who has had experience in southwest Florida. These writers fall into the natural error of inferring that tarpon

can be taken where the fish abound. There may be a thousand tarpon in sight, and twenty boats fishing with all proper appliances, and not a fish touch the bait. Especially must this be true of a place like Aransas Pass, described in the *Cosmopolitan* lately and in FOREST AND STREAM. Forty-five feet depth of water would rule out bottom fishing, and although a fish might be taken by trolling, the capture would be at very rare intervals. There is no feeding ground like the Caloosahatchie. The wide, brackish river is swarming with mullet, catfish and crabs—all favorite food for tarpon, and the water is rarely more than 15ft. in depth. The fish are not afraid of boats, steam or sail. They are more abundant now than ever before. I do not believe it is possible to materially diminish the supply, and I find all those of experience with whom I have talked agree with me. F. S. J. C.

### ANGLING NOTES.

#### Fishways for the Hudson.

AS PRESIDENT of the Mohican Rod and Gun Club I have received many encouraging letters in regard to the action of the club looking to the opening of the Hudson River with fishways that salmon may ascend to headwater spawning grounds.

I am tempted to give a short extract from a personal letter upon this subject that I received from my friend Rev. Dr. Anson J. Upson, Chancellor of the University of the State of New York: "I have read your excellent paper on 'Salmon in the Hudson' with very great interest and profit. You have increased my knowledge in a very interesting way. Your distinction drawn between a sportsman and a sport is very significant, and your incidental mention of my revered friend, Dr. Bethune, touched my heart. My father was a sportsman, but unfortunately I have not inherited his tastes. What a glorious sight it would be to see the salmon leaping in our great river! May you and I live to see it. And if I do not live long enough, may you enjoy the sight and the flavor of many a noble fish. I shall keep your article on the salmon among my treasures in my scrap-book, for the pleasure of future ages."

The matter of building fishways in the upper Hudson is, I find, of interest to a great many people, not only in the State of New York, but to people in other States as well, but I am amazed to find so many that knew nothing of the importance of building fishways. Some are surprised to know that salmon have been planted in the Hudson, but I am satisfied that there is and will be an awakening upon this subject that will bear fruit.

But there are things, other than fishing, to be considered and combated before the Hudson can become a salmon stream with all that the term implies. The Glens Falls Star reprinted the editorial in FOREST AND STREAM of May 26 as being directly to the point of the whole matter, "that public sentiment must be aroused by educational processes." A gentleman in Lansingburgh, N. Y., who says he has read my notes in FOREST AND STREAM and is consequently moved to write me, says: "I believe that unless some rigorous measures are taken with those who net and spear the fish in the river here, the lovers of salmon fishing will find but poor sport on the Hudson. During the past three years I have seen probably twenty dead salmon between this village and Mechanicville, and of these about one-half were examined to learn if possible the cause of their death. All showed injuries of some kind and some were undoubtedly caused by spears." The writer tells me, further, in a second letter, of nets that he has destroyed above the Troy dam. All that I can say at present is that steps have been taken to see if it is possible to educate the people down the river in regard to the use of spears and nets.

#### Fish Food.

Apparently only a small portion of our anglers realize how important it is that the trout in our streams should be well fed. We hear much of stocking waters with fish, and little about stocking the same waters with food for the fish to live upon. Any fish to be at its best must do more than simply exist—it must grow fat, and it cannot do this on pure water.

I have been surprised this spring to find brook trout from many different streams in extremely poor condition. Early in the season I accounted for it by saying that the food had not hatched out and the trout were much in the condition that winter finds them after they have wasted from spawning. That excuse will not answer now that June is here, and the fact to be confronted is that many of the streams do not produce enough food for the fish they contain. I know I have been accused of riding the fish-food hobby, but I believe it to be a good hobby, and I would like to have others join me, for there is plenty of room for this sort of riding.

A gentleman in Boston, who fishes the trout streams of Cape Cod, tells me of marking brook trout, as salmon have been marked, in the stream he fishes. A few days ago he caught a sea run brook trout (*fontinalis*) weighing 1lb. 6oz. This trout was marked in 1892 and was then 3in. long and weighed probably 2oz. He tells me that this growth is above the average of trout in the same stream under similar conditions. The food of trout that have access to salt water is largely crustacean, judging from the color of their flesh, and there is no difficulty in planting trout waters with fresh-water shrimp.

Mr. C. F. Orvis wrote me recently and I quote the following from his letter: "Lots of trout have been taken in the Ondawa" (this is the Indian name for the Battenkill River, which rises in Vermont, not far from Equinox Mountain, and flows through the Bennington Valley and finally turns west through the mountains, crosses Washington county, N. Y., and empties into the Hudson). "There are more trout in our river now than there were 20 years ago, and they are fine and fat. I believe the shrimp that I put in the stream five years ago are yielding good results. I do not know this, but do know that the trout are now plumper and there are lots of them. The trout fry that I hatched and put in the river, we fed for some time after the sac was absorbed. I believe these little fishes were much better for planting than fry with sacs just or nearly absorbed."

Only a few days after receiving this letter from which I have quoted, Mr. Charles H. Wilson called upon me after fishing the Battenkill in Washington county, and he said that never had he taken such fine fat trout from this stream as those taken this year.

It is a very simple matter to stock a stream with fresh-water shrimp, and they cost only \$2 a thousand, delivered

at the express office, if one has to buy them, and at the Caledonia station of the New York Fish Commission they have been furnished free, and I presume they are yet furnished to applicants in a like manner.

#### Brown Trout.

Mr. W. C. Witherbee, of Port Henry, N. Y., who has been active in stocking the waters in Essex county, N. Y., also stocked with shrimp, but I cannot tell without overhauling his letters. Anyway he writes me very recently as follows: "I am a firm believer in stocking our waters and protecting the fish, for I have seen the good results of the first in our local waters which were just about depleted from over-fishing, but are now, thanks to restocking, pretty fair fishing. I was interested in this week's FOREST AND STREAM article by you on the brown trout in the Hudson. I stocked pretty liberally with them here, both streams and ponds, and they have proved a success in waters not quite suited for *fontinalis*. One brook has furnished some first-rate fish, but it is too near the people at Mineville and Port Henry for the trout to grow very large—one pound is the largest I have known of being caught there. But in the ponds they are doing grandly."

"My wife and I caught five one morning from Turner Pond weighing respectively 4½, 4, 4, 4 and 3½lbs., total 20½lbs. I have tried some of the other ponds since and while not fishing the best times of the day have had fine sport, and am glad to see the trout seem to be doing well in hatching. I have tried not to keep any under 2lbs. in weight, and have only saved one under that size, a fish of 1½lbs. that was hurt badly and I thought he would not live."

"I caught three yesterday of 2lbs. 3oz., 2lbs. 10oz. and 4lbs. in a spring-fed pond that gave as good a fight as any trout I ever handled. We see good results too in stocking with *fontinalis*, although they do not grow as rapidly as the brown trout in size."

There is a disposition on the part of some people to give the brown trout the cold shoulder, in other words not to plant them, because they may interfere with the native brook trout, but the brown trout has its place as well as the *fontinalis*, and will, as Mr. Witherbee suggests, thrive in waters not wholly suited to the native trout. They should be planted intelligently in selected waters, not blindly as so many of our fish are planted, and they will prove a most desirable addition to our list of game fishes. A. N. CHENEY.

### REMINISCENCES OF OLD TIMES.

MY last, long, bootless tramp to the old trout brooks set me to dreaming, as I rested with my pipe in my big chair after I got home, of the old boyhood days before the forests were all cut down, when an afternoon on the same waters always assured me of two dozen trout, and oftener of four or five dozen for the family breakfast, and sometimes for dinner the next day.

It brought back a cloud of recollections of many happy days, and pictures, photographed on the memory, of many a wooded ravine, with falls and rapids, overshadowed by old oaks and hemlocks, where the trout lurked beneath the foam and bubbles; or many a broad grassy meadow, where the snake-like brook now buried itself under one bank and now under the other, with as sure find for a fish at every bend. Well do I recall my first trout, more than 60 years ago, when, a very small boy, I made my first essay. How, when I went into the old alder swamp back of the house (now long since cleared and cultivated) to cut a "fishpole," I lost the new green line for which I had just paid a "fourpenny bit" at the village store, and how my mother consoled me by the production from the depths of her spacious work-basket, of a piece of fine cord which she had stored for some other purpose, but which made a very good line for a first one. I even remember the blue denim jacket and trousers, the "dog's head" on the brass buttons, foretelling the future sportsman, which I wore, as I started for the brook in the morning, with a two-quart tin pail in my hand to carry my luncheon and bring back my spoil.

That luncheon was never eaten, for the radiant beauty of the first fish destroyed my appetite for all else, and I started home on the run to exhibit him, without waiting for more. I may have told this story before, but I was as wild as Christopher North over his first minnow, of which every one who has read his delightful "Recreations" will doubtless recall his description.

I can see the whole scene now, the placid mill pond, the quiet brook, entering it under the old wooden bridge, and the bobolinks singing in the meadow above. How carefully I concealed the hook in the wriggling worm and then dropped it over the upper side of the little bridge; how the sudden jerk on the line startled me at first, and how triumphantly I swung the spangled victim on to the bridge. He must have been fully five inches long, if not six, and just went into my pail, and I asked for no more that morning. I returned to the brook in the afternoon with an older companion, who gave me my first lesson in throwing the bait into the head of the rapids and letting it sweep down with the current and swing naturally in to the abiding places of the trout.

The first meadow gave us a sufficient string for that day, for creels were unknown to us, and a willow or alder stick with a crotch at bottom, run through the gills, was all our basket.

As I grew older I went up the brook further, and many a picture of it is yet fresh in memory. In the first meadow it was joined by a larger one, which held larger trout, but was not so sure fishing, for there was another sawmill, two miles higher up, on it, and when that was running, and the water was full of sawdust, we could not get a bite.

Later in the summer, when the winter's cut of logs was all saved up, we used to go up that branch, and I can see now the big elm which overshadowed a great bend, and feel the pull with which a 1lb. trout seized my hook the instant it touched the water, just when it drew in under the roots; and how soon I had him turning somersaults in the long grass of the meadow!

But I am getting garrulous, and must bring this to a close with one more picture. Further up the brook a pasture road crossed it, at a shallow ford, and I can recall one June morning when I came to this road, where the farmer had just cut a "brush fence" across the brook to keep his cows from straying up and down. It was a perfect day, the sun sprinkled the rippling waters of the ford, as they broke over the bright pebbles, with splashes of sunshine, constantly moving as the gentle breeze swayed

the branches; the leaves on the young saplings which had just been cut had not faded, and formed a green wall on both sides of the path, and on the lower side the water deepened a little as it drew under the brush.

I cast my bait into the ripple just above the brush, and it went out of sight instantly to a vigorous pull from below. When I pulled in return the hook caught in the brush, and I lost my fish. Three times was this repeated, and then he would bite no more. He had probably got pricked.

I lost my fish, but I shall never forget the picture, which I can see now after the lapse of nearly sixty years whenever I choose to close my eyes and recall it. The rippling water, the swaying branches, and the dancing sunshine flickering through the leaves, come back to my vision as clearly as if I stood there now, and remind me in my old age that I had my share of simple pleasures and pure enjoyment in my youth, and have no reason to repine if I have now to fall back on my memories of those happy days.

I may have a few more bouts with the trout yet and hope I shall; but I must go far away, where so-called civilization has not despoiled Nature of all her bounties and pleasures.

CHARLESTOWN, N. H.

VON W.

## NIAGARA ANGLERS' BANQUET.

LOCKPORT, N. Y., June 20.—A time such as only true anglers can have was enjoyed by the members of the Niagara County Anglers' Club at the banquet last evening given by the defeated but defiant Blues to the triumphant but timorous Reds. The side beaten at the Youngstown fishing tournament, as fully detailed in FOREST AND STREAM this week, provided the spread, and the winners did the speech making.

The announcement that FOREST AND STREAM would have a full account of the tournament and banquet was enthusiastically received, and the local agent was compelled to send large extra orders for the papers highly appreciated by the banner fishing club of the United States.

Mine host W. W. Stevens, himself an angler and prize winner, had ransacked the four quarters of the globe in order to set before his brethren all the delicacies of the season. A feature of the menu were Chautauqua Lake pickerel, no specimen weighing less than 15lbs. stuffed. After all had done justice to the feast, Capt. Nicholls of the Blues arose and in a felicitous speech reviewed the principal scenes of the annual excursion and tournament. The following toasts and sentiments were wittily responded to:

Toastmaster, C. L. Nicholls; "The Victors," Capt. G. L. Holmes; "The Vanquished," W. H. Case; "The Clambake," H. C. Hulshoff; "The Club Budge," A. L. Smith; "The Ladies," John Craddock; "Angling vs. Pugilism," Will E. Jenney; "Uses of an Eel Skin," Ed. Brown; "Youngstown Beverages," W. F. Bennett; "Bass Fishing and Catching," E. F. Smith; "Death of the Lobsters," James Clifford; "Fishing Weather," F. J. Davis; "Ounces Counted," W. A. Hixson; "How to Cook Clams," Joseph Dumville; "Deep Lake Fishing," Jerome E. Emerson; "The Club's Finances," Geo. W. Weaver; "Music on the Water," Will R. Smith; "A Political Pull," M. O'Connor; "An Abrupt Departure," F. K. Sweet; "Fish, Flesh, or Fowl," Tom Eckensperger; "An Empty Creel," J. W. Peuss; "Hulshoff as a Worker," James Rowe; "The Eldorado," M. Wendover; "Clams in the Morning," Hon. John F. Little; "The Niagara County Anglers," Hon. John A. Merritt; "Our Niagara Falls Members," Hon. F. A. Dudley; "Fishing at the Falls," Geo. Nye.

The individual prizes as previously published in this paper were awarded by President W. H. Case with suitable words for each winner. The responses were particularly happy.

M. H. HOOPER.

## ON THE SALMON RIVERS.

MOSSY CLIFF CAMP, St. Johns River, Gaspé, P. Q., June 14.—*Editor Forest and Stream:* I am away here on the north shore, and perhaps a few lines concerning the salmon fishing hereabouts would not be amiss to some of your readers. I am with Mr. John Fottler, Jr., who with Mr. Ivers Adams, control this water. We left Boston on the evening of June 4, and soon found on the train Mr. Phillip Moen and Mr. Geo. Blake, of Worcester, Mass., bound for Mr. Moen's preserve on the Little Cascapedia, our party consisting of Mr. and Mrs. Fottler, Miss Pauline Fottler and myself. Mr. Moen and Mr. Blake made a royal addition thereto, and we had a splendid time nearly to our destination. We came by rail via St. John to Dalhousie, thence by steamer to Gaspé Basin. At Dalhousie our party was augmented by Miss Dutton and Swett, of Boston, en route for the Little Parbeau, Mr. Murdock and friend, of Chicago, for the York River, and Mr. Tappin, of New York, for the Dartmouth.

We arrived at Gaspé Wednesday night, 6th inst., and Thursday afternoon saw us safely at Mossy Cliff Camp, twenty miles up the St. Johns, a most beautiful and romantic spot.

The salmon had struck the river ahead of us, but Thursday evening's casting failed to raise one.

Friday morning Mr. Fottler had two rises but failed to hook one. In the evening I secured the first fish, a 17-pounder, which could not resist my Durham-ranger. Saturday we killed three fish weighing respectively 19, 10 and 12lbs. Tuesday Mr. Fottler killed a handsome fish of 15lbs. weight.

Last evening we both had a novel experience. Mr. F. went up the river and I went below. My first pool produced no rise, but the second (Still Pool) was a trifle different. I struck a fish a few minutes past 6 o'clock and it was a quarter to 9 when he was gaffed and laid in the canoe. We had decided the first half hour that he was foul-hooked and was a big fish, so we were not surprised when we found the fly firmly embedded in one of the small fins back of the throat. It was the greatest fight I ever had and I wonder that I saved him. When we got back to camp Mr. Fottler had been there some time, and what was our surprise to learn that he also had foul-hooked a large fish and after nearly an hour's fight had killed him. The two fish lying side by side looked as near alike as two peas, and each weighed 22lbs. I think this a very curious incident and one worthy to be chronicled.

Thirty minutes' walk from our camp, right up the mountain, and I might say planted fairly on the mountain top, is a beautiful lake nearly circular in shape and quite a mile across. It is alive with the most gorgeous colored

speckled trout I ever saw; and they take the fly in a way to satisfy the most exacting angler. They are small compared with some of our Maine trout (running from  $\frac{1}{2}$  to 1lb. in weight) but they make up in color and gaminess what they lack in size.

Take it all in all this is an anglers' paradise. The beautiful river and lake and mountains and woods leave nothing to be desired.

By way of Gaspé we hear that the season on both the York and Dartmouth is a trifle early yet, neither Mr. Murdock nor Mr. Tappin having killed many fish.

Should anything more occur of interest I shall be glad to apprise you of it.

J. W. B.

## CHICAGO AND THE WEST.

[From a Staff Correspondent.]

Across the Range.

CHICAGO, Ill., June 15.—Heavy tidings come from Ft. Yellowstone, the announcement of the death of Lieut. L. Daniels, one of the younger officers on duty there under the superintendent of the Park, Capt. Anderson, under date of June 5, states that Lieut. Daniels left the post for a trip to Gardiner, Sunday, May 27, starting for home about 11 P. M. At 3 A. M. the following morning he was found about a mile from Gardiner. He was unconscious, and had apparently been thrown from his horse and dragged a short distance. He never regained consciousness, and died the Thursday afternoon following. "This, of course," writes Capt. Anderson, "has cast a damper over everybody." It well might do so. Lieut. Daniels was a blithesome, open-hearted soul, a thorough soldier and a gentleman in the highest sense of the word. His death leaves it impossible to repay the many courtesies shown the representative of this paper by him during the recent visit at the Post, which was his abiding place.

### The Majority Claims Another.

Mr. C. C. Lamos, whose recent sudden death by pneumonia at his summer place at St. Jo, Mich., so startled his many friends in this section, was a type of the well-to-do modern city sportsman, up to date and generous in his tastes with himself and all around him. He was a member of the Horicon and other shooting clubs of this city, where he was known also in business circles as a successful man.

### A Near Thing.

Mr. F. L. Stanton, manager in the West for the Natchaug Silk Co., of Willimantic, New York and Chicago, was recently the pilot into Wisconsin wilds of Col. J. D. Chaffee, president of that company; Mr. O. S. Chaffee, of Willimantic, Conn., and Mr. D. E. Adams, a manufacturer of Boston. Mr. Stanton was anxious to show his friends some sport, but fortune was against them seriously from the start, and at length only let them off with what was a most narrow escape from a fatality. They met high wind, cold weather and poor sport at Lake Vieux Desert, and got no 'lunge' of consequence. On the day in question Mr. Stanton saw Mr. Adams strike a heavy fish, and as the fish left the water twice it was plainly seen to be a very large one. Mr. Adams went on playing the fish, and as it was growing cold and the water was very rough, the other boats left him and went on in to camp. About an hour afterward repeated calls were heard, and those on shore at last discovered that Mr. Adams and his oarsman had met with a capsiz. They were two miles out in a bad sea. Two guides put out to them and found Mr. Adams's guide on top the overturned boat. The guide could not swim. Mr. Adams was in the water holding on to the boat with one hand. He was heavily pressed, had on hip boots, an overcoat and a mackintosh. He was a good swimmer and a gritty man. He had been in the water an hour and a half when the rescuers came up, but he had hung on to his rod and played his fish all that time, and moreover had the 'lunge' still fast when the boat came up. He told the men to take his guide aboard, and they did, and then he told them to land his fish. They got the 'lunge' up alongside the boat, a 40lbs. fish, and instead of gaffing it tried to pick it up with their hands. Of course the fish struck the side of the boat and broke away. Mr. Adams then found that the boat would not carry all four, even if he could have gotten into it, so he ordered them to tow him ashore, which was done. He was in the water over two hours. When he got out where the air struck him he chilled through, became unconscious and nearly died. The party worked with him nearly all night, and at last got him through after a very near thing of it. Mr. Stanton and Mr. Adams then came on out of the woods. Mr. Adams writes from the East that his health has not been hurt by the trip. The incident leaves us to believe that while the quality of the Boston sportsman is all that could be asked, the education and ability of the Vieux Desert guides might be largely improved without serious injury.

### Will Make the Trap.

Mr. Jas. Irwin has sold out the Hotel Richelieu at Little Rock, Ark., and was recently in Chicago for a few days looking around, but slipped away to Kansas City before I got to see him half as much as I wished. I hope he will locate in a good game country again when he next settles, for it would be a shame for so ardent a sportsman to be out off from good sport. Mr. Irwin says that his father, of Kansas City, Mo., is going to patent and manufacture the minnow trap mentioned in these columns earlier as his invention. Mr. Irwin, Sr., says he believes it is the only really practical minnow trap he ever saw.

### Go Fishing.

The *Sovereign Visitor*, of Omaha, Neb., sizes FOREST AND STREAM up about right when it says:

"The FOREST AND STREAM is the most able and readable paper of its kind in America. While devoted to the rod and gun its columns bubble over with bright items of interest to everybody. We clip at random from a recent issue the following bright item:

"Change the subject. Leave off the chit-chat. Break the chain. Get out from the humdrum. Go fishing. There are waters persuasively purling for you. There are violets blowing for you in the meadows, and anemones and star-flowers glowing for you in the shade of the hemlocks. There are fish gleaming for you in the streams. Go fishing."

The literary editor of FOREST AND STREAM is a corker if he would only try. You are liable to strike a good thing any minute in FOREST AND STREAM, and it's a cinch you

get more than \$4 worth in a year. The advice to go fishing is worth more than that, if followed.

### Along the Mississippi.

A Dubuque, Ia., market-fisherman advises the seining of the bayous and sloughs left cut off by the receding waters, and the returning of the cut-off fish to the river. The old Fish Commission of Illinois knew this before and annually planted millions of young fish in that way, which is one of the most practical forms of fishculture along a stream like the Mississippi.

Fish Commissioner Delevan, of Monticello, writes to the Dubuque Times and states that the laws of Iowa do not prohibit fishermen or anybody else from seining in the Mississippi, or any of its ponds or lakes on the Iowa shore. He says that Illinois has such laws, but Iowa has not. No man can be successfully prosecuted for seining on the Ohio shore.

At Princeton, Ill., Monday, thirty-two persons were arrested by Fish Warden Blow for violating the fish laws by fishing in an illegal manner in the Illinois River. A telegram says that Warden Blow notified the proprietors of the Red Mills that if their dam in Bureau River was not provided with a fishway inside of ten days he would blow it up with dynamite.

The Dubuque Times of June 14 says the fishermen are going to sue Warden Blow for damages for destroying their nets. Fish Commissioner Langford, of Iowa, is also threatened similarly. This is the same old bluff. Let them sue if they want to. It still remains true that a burned net holds no fish and over burned nets there will be forty bluffs to one suit, and a very questionable win in that, as the plaintiff must come into court a confessed law-breaker. In law he cannot have "clean hands. Let the warden go on burning the nets and let the fishermen proceed with their bluffs, if they like.

Judge Hoyt, who tried the Lansing, Iowa, fish cases, differs from Judge Brannan, of Muscatine. The latter does not favor the market-fishers. The former does. The Supreme Court, of Iowa, will decide.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

### The Adirondacks.

UPPER SARANAC LAKE, Axton, N. Y., June 18.—Fishing was never more prosperous or successful in this section of the country than at the present. From Rustic Lodge as a center, sorties have been made of late in all directions with the greatest success. Last week parties from the house had great success in Round Lake, twenty minutes' row from here. One alone of the party returned in the cool of the evening with his basket comfortably filled with about 40lbs. of fierce-biting pickerel, none of which weighed less than 3 or 4lbs., while several weighed 8 and 10lbs. Another reports the capture of an 18-pounder in the same lake at the same time.

In another direction last week eight bouncing trout, none weighing less than 8lbs. and several from 7 to 10lbs., from Tolmesby Pond, three hours' comfortable and picturesque ramble by foot and boat from here.

Only yesterday, at the same pond, our party reports the result of the most interesting fishing of the season. As the dial of the watch marked one hour from the time of the first drop of the bait, 150 savage and hard-pulling perch as a reward, not counting the small ones thrown back, crowned their efforts, each weighing from  $\frac{1}{2}$  to 1lb. each. As fast as the line was dropped the fish responded. Vast schools could be seen gracefully gliding under water, while here and there swarms would fill the surface. Eight trout were also caught at this same fish, least weighing 3lbs., heaviest 10lbs.

But of all the fishing grounds the Upper Saranac combines the most pleasure for the lover of fish and nature. No lake in the Adirondacks seems to be stocked so well with lake trout. This house reports some of the men catching trout as high as 20 and 22lbs. each, while one man has the record of 106lbs. in one day.

SAMUEL CRAIG HUSTON.

### A "Freak" Goldfish.

THERE are many kinds of goldfish, and, with the exception of one shown in Mr. Thos. J. Conway's window, on Broadway near FOREST AND STREAM, all look alike. Mr. Conway's fish differs not only from goldfish; but from all other live fish. He wears no dorsal fin. Years ago a live fish without a dorsal was discovered and watched carefully while he lived. When dead his body was stuffed and put in a museum. According to Dr. Woodson (who ought to know for he is in charge of the new aquarium in Battery Park) it was never believed that a fish could live and swim without a fin like the dorsal. This fin is necessary to balance the fish when either resting or swimming. When swimming it is used as well to propel the body; when resting, it holds the fish right side up and keeps the fish from making a clam of itself.

He worries along very comfortably without this balance fin. Four months ago he was floating with a great herd of brethren in a Fulton Market aquarium. His commanding position among freak fish is also dependent upon his mouth, as it resembles the mouth of a frog. He is a trifle more than 4in. in length; his breadth from his lower fin to the place where the upper fin should be, is 1in.; his color is that of an ordinary goldfish. Along his back are four ridges, the highest being just back of his head. The dorsal fin, if started, may have been cut off by an enemy, but there is nothing to show whether he is a crippled fish or whether he just grew that way. When swimming he moves with his head downward, and when rising to the surface he appears with his tail at the top. The two small fins under his neck move as fast as the blades of a centrifugal snowplow in a northern New York cold spell.

### Vermont Lake Trout.

NEWPORT, Vt., June 16.—Notwithstanding the hot weather this has been the banner week of this season for lake trout, everybody caught fish who went after them. The Owl's Head Mountain House is at present the headquarters for quite a party of anglers, and they have all had great luck. One gentleman from Boston caught five one afternoon which averaged a little over 8lbs. each. Thursday afternoon Mr. Young, of Lowell, Mass., took four in one hour's fishing which weighed 34lbs.

There have been two or three "big ones" taken in the past few days but I have been unable to get reliable information as to the exact weight. Yesterday one party brought in eleven weighing from 6 to 14lbs. each.

I hope to be able to report some good catches of bass next week. The open season came on yesterday. ROB.

## SHU-SHUGAR LAKE.

TEXAS.—For more than a year the writer has been feasted on the most wonderful of stories about the fish and game to be found in and around a certain lake away down in Matagorda county in our State, five miles from any human habitation and twenty miles from any town or village, buried in the canebrakes and forests of Caney Creek and the Barnard River, and the home of the wild turkey, the deer, the catamount and the bear, and on more than one occasion he had planned a trip to this wonderful region with his sportsmen friends, and in imagination delighted beforehand in the pleasures of a week's sojourn upon the banks of the hidden pellucid jewel of a lake.

From every person who had ever visited this region had come the same delightful and wonderful accounts of the abundance of game, and the size and variety of the fish to be had without a shadow of exertion until the sportsman wearied of the slaughter, and surfeited upon the untold number of finny ones caught.

The lips that described this wonderful region were not those of members of our Annanias Club, either, but most reputable and well known citizens of Matagorda and Wharton counties, and as such they compelled implicit belief.

These parties affirmed that the lake, called by them Jug Lake, because in the shape of a jug with a little island in the midst of the handle, had water in it 25ft. deep, covered eight or ten acres, and was as clear as crystal, and there all day long the trout of immense size, and goggle-eyed perch, and toothsome calico bass, disported, and could be seen and watched easily in their movements in the clear water. In these counties the inhabitants all call a black bass a trout.

This lake, it was said, was never fished. The country round was very sparsely settled, the nearest ranch was the Duncan ranch. Only negroes lived there and they caught all the fish they wanted from the Caney Creek, right at their door, and had no need to go far for fish.

Then the fish inhabiting this lake were entirely ignorant of the fisherman's wiles. They had no acquaintance with spoons, spinners, phantom minnows, or flies. One man, who had fished there and caught fish of every variety until he was tired, said that they would strike at anything, that no kind of lure could be thrown into the water and taken from it without having strikes from half a dozen fish, each struggling to be the first to capture the bait. He said that his little ten-year-old boy, fishing in a little slough or draw running down into the lake, had in half an hour caught a basketful of splendid goggle-eye perch that was more than his whole family could eat.

Then these fish did not bite at only stated times and seasons, nor did the wind or weather have any effect upon their appetites. Be the time winter or summer, rainy or dry, windy or still, at early morn, sultry noon or dewy eve, all times were alike to them, and they were hungry and ready to be impaled upon the barbed steel at any time, even in the night. They were the native, wild, hungry, unsophisticated fish of the untamed wilderness, and as such afforded the perfection of sport to the fisherman, be he ever so unskillful.

Then the forest was wild and almost impenetrable, and full of game. No one ever rode through them in the vicinity of this lake without seeing both deer and turkeys. Turkeys gobbled numerously from the trees every morning in the spring, and were so unaccustomed to the sight of man that his appearance did not alarm them, and the merest tyro of a hunter could kill them, at which information the writer hereof brightened wonderfully, for he has not killed a turkey for many a day, and he resolved that the rest of the party might kill the deer, but he wanted a turkey sure.

It was said also that several bears had been killed in the neighborhood and that we could not fail to secure several of those beautiful spotted wildcat skins, that mount so beautiful in a rug, as they would very likely visit our camp during the night, and if we had a dog, and he bayed them, they would mount the first tree and spit defiance at him, if they did not boldly attack him.

This lake was, however, thirty miles from Wharton and about the same distance from Matagorda, and the nearest human habitation was Duncan's Ranch, owned by Col. A. H. Pierce, the cattle king of Wharton county, a self-made man who owns about 160,000 acres on both sides the Colorado River, below Wharton, and down to Matagorda Bay.

Jug Lake and its charms was early discussed by the writer and his sportsmen friends many times during the year, and at last a trip materialized and a number of us resolved to brave the trials of the unknown region for the sake of the splendid sport to be had there. For once in our lives we resolved to go where we could have all the fishing and hunting the most ardent sportsman could desire. April was warm and dry, a spare week came to us in which we could throw aside all business cares and troubles, and we resolved to do so. The three who started from Victoria, Texas, were the writer, one who shall be denominated M. and a certain ardent fisherman and railroad magnate, who had kindly furnished his private car for the trip so far as we could go in it.

At Pierce's Station Col. Pierce himself boarded the train, to whom we told our destination and purpose. "All right," he said, "you'll find trout down there as long as my arm and plenty of deer, and you just go to McClosky, he is my manager at the ranch, and tell him I sent you, and he'll treat you like a white man, he will sure. I was never down at that lake myself, but they do say that there's just lots and cords of fish there, and any amount of game about."

Arrived at Wharton we were joined by three more sportsmen, who equally with ourselves were consumed with desire to taste with us the delights of a perfect hunting and fishing trip, and they were, equally as enthusiastic and confident as ourselves, as to the certainty of a glorious time and fine sport, and contributed many thrilling and authentic additions to our present store of information, and fanned the fire of anticipation in each member of the party. We could hardly be restrained from endeavoring to get off that night; but preparations had to be made, and it was deemed best to take an early start the next morning for the thirty mile trip before us.

On the morning of the 17th, having stowed our boat, cots, bedding and tent fly and other impedimenta, and our provisions upon a light road wagon, and provided ourselves with a top ambulance and driver for the passengers, about nine o'clock, after the usual number of stop-

pages and delays to get some indispensable thing that had been forgotten, we were at last ready, and a group of friends gathered at the grocery, from which we bought our provisions, and from which we made our start, to see us off. Our accomplished cook, Frank, drove the baggage wagon, and Brown mounted the high seat of that vehicle with him, so as to have good wing shooting on the way, while B., of Wharton, and M., of Victoria, two fast friends and cronies, concluded that they would perhaps have better shooting from a sulky, or two-wheel jolter, owned by B., than from the covered ambulance, and that they would lighten the load; so they appeared in the two-wheel vehicle and proposed to make the trip in that.

The morning was cloudy and threatening, and free and cheering predictions were made that we would certainly have plenty of rain before we got back, a prediction which really seemed likely to be verified, and meant many weary miles over heavy roads before us. The enthusiasm of some of the party was perceptibly cooled, and they would have been willing to compromise upon a nearer expedition to Peach Creek, a lovely bass-haunted stream nearer by. But our captain, the railroad magnate, answered that we had started to Jug Lake, and to Jug Lake we would go, rain or shine, and as is usually the case when unfavorable circumstances are bravely and manfully faced, we did not have a drop of rain upon us until we were nearly back to Wharton on our return trip, and that was only a light passing shower.

About 13 miles out, we reached Bay Prairie, a stretch of open land that reaches nearly or quite to the Matagorda Bay, and preparations for plover shooting began; guns were put together, ammunition boxes opened and close watch kept for the birds. The vehicles spread out over the prairie, and soon the sound of rapid firing all along the line announced that the action had begun. When we arrived at our nooning place, Dickinson's Point, about 18 miles from Wharton, we had 25 or 30 fat plover, and had gotten a wing shot or two at ducks, long shots, however, and wild.

These plover, when properly dressed and nicely cooked by Frank, accompanied with broiled bacon, strong coffee and the et ceteras from the home supplies, made a dinner to which we all addressed ourselves without preliminary grace, except that one of the party as he fastened his teeth in the breast of a juicy bird, found voice to mumble "Now good digestion wait on appetite, and health on both," and while we ate and smoked, the unharnessed horses rested and dozed.

About five miles more of prairie was to be traveled before we turned to the left to Duncan's ranch and the unknown forests surrounding Jug Lake. This prairie proved a better range for plover than above the point, and a good many birds were bagged, several very pretty wing shots being made while vehicles were in motion, and now and then a double cried or a jack rabbit knocked over as he scampered away.

We then bore to the left and entered Caney timber and the confines of Duncan's ranch, beyond which no member of the party had ever been in this direction, and began to canvass the expediency of procuring a guide from among the colored denizens to lead the way to the promised land. After passing a good many tenant houses and negroes at work in the fields we at last reached the principal dwelling, a large two-story house on the banks of Caney, and all halted for water.

A mile further on we came to another settlement of negro cabins, near a queer little church, utilized as a schoolhouse. Up to this time we had seen no white faces on Duncan's Ranch except our own, and they began to show that they "knew the sun and wind." Besides the church and cabins, we found here a queer old forge, sheltered behind the half of an old shingle house roof, set up slantingly, and near by, and evidently the owner and proprietor and user of the forge, an old, old ducky, who looked anywhere between 80 and 100 years old. We called him up to our wagons and began to question. Yes, he knew where Jug Lake was; it was over that way, about four miles, but the water in it was very low and much fallen timber in it. That was not the fishing lake at all we wanted to go to, but Shu-Shugar Lake was the place. There was the largest lake, the most water, the largest fish. There were all kinds of fish in Shu-Shugar Lake; he had fished there often; had caught one trout there more than three people could eat. How far was it? Oh, only about four miles. "You go up there by the burned gin, and then it is a straight road to the lake." Could we get some one to guide us? He would see; there was a George Jackson in the house, he might go.

Gen. Jackson appeared, lame but game, with a yellow buckskin jacket garnished with brass buttons, and saddled a gaunt, bony claybank pony staked near by to an old tumble-down chimney. He took his old short-stem pipe from his mouth, struck a lopsided, erected his military person in his saddle, waved his hand, and neither Napoleon at Austerlitz or Washington crossing the Delaware, ever cut so striking and grotesque a figure as did our Gen. Jackson, now.

We went in a hurry, passed the burned gin, drove in a trot across an old field, where never a wheel had passed before, and plunged into the wild canebrake, with cane on the right of us and cane on the left of us, and a rank growth of briars and weeds on either side of the doubtful trail which we had now struck, with nothing to remind us that we were within a hundred miles of civilization except the ever present barbed wire fence, along which we made our difficult way, and which stretched on and on into the pathless tangle of forest and cane beyond us. Here and there the stump of a tree which had been cut out of what was once a road, reminded us that the ax had been here, and M. hugged B. more closely and convulsively, as a wheel of their jumper would mount one of these stumps, or both wheels strike a fallen log across the road, and the foliage and growth became more and more dense as we advanced, the trees taller, the thick undergrowth beneath, the ash and hackberry and elm and pecan, ranker and more interlaced, and the by-path we seemed to be following, more and more dim and undistinguishable. "This is certainly no thoroughfare," P. muttered disgustedly as one wheel of the ambulance grazed a fence post and the other barked a tree on the other side, and a third bumped and jolted them as it mounted a fallen log; and his fellow travelers agreed with him in a few moments when they reached a leaning tree which had been bent and almost prostrated by some sudden fury of wind, and stretched across the road so low, that the horses of the first vehicles had to back their ears to go under and the passengers to duck their heads as low

as the travelers on the Chesapeake & Ohio Canal in Virginia in olden times, at the cry of "Low bridge!"

The last vehicle, being the top ambulance, with a top high enough to chamber the longest back man in Wharton county with the highest stovepipe hat, at this obstacle incontinently called a halt, and sorrel reached over and gave bay a vicious bite, as if to say, "It is all your fault," and P. yelled aloud, "Say, you fellows ahead, aren't you going to camp with us?" and thereupon the whole cavalcade came to a halt, two hatchets were produced which luckily had not been forgotten, and a road was cleared through the thickets, so that by describing a letter C, we could get around that obstacle.

Our ardor cooled more and more as the difficulties of the way more and more confronted us as we penetrated deeper and deeper into the forest. Road there was none. The winding and twisting that we did in that forest is impossible to describe. We marked a perfect hicroglyph of curves, of Us and Ss and Cs and Ms and Ns, and mixed them up with sharp angles, blindly following General Jackson with his buckskin jacket and claybank pony, until we began seriously to doubt, as we traveled mile after mile of this somber jungle, whether we should ever sweeten our coffee on the wished-for banks of Shu-Shugar Lake, or dip our lines in its unfished waters. But M. comforted us, after he had given out several long-drawn sighs, by remarking, "It is bound to be a splendid fishing place, anyway, for it is perfectly evident that nobody ever goes there over this road."

We remembered too that our guide had not been there for eighteen months, but had contented himself to catching the (as he termed them) goggle-mouth perch, of Caney.

Brown affirmed confidently, with shining eyes, that there was bound to be plenty of deer and wild turkeys down in here, for it was evidently the very place for them, and in the gloom of the forest just then, one of the party, who was walking, saw a huge black object high up in a large tree, and with an excited, "Is it a bear?" leaped for his Winchester, and in a twinkling of an eye had bored two holes clear through a tremendous old abandoned eagle's nest.

The straight road that we had been told led to the lake, developed so many devious and aimless turnings and twistings, and the fallen timber and decaying logs we jolted over were so numerous, and the overhanging boughs were so frequent and familiar with our faces in passing, and the undergrowth was so dense, and so crowded and so choked the way, that we began to lose confidence in our guide. Just then, sure enough, our guide came to a full stop, and apparently there was no outlet for us ahead, no way to turn around, and no sign of a road any where. Two of us sprang out, however, hatchet in hand, and by direction of General Jackson began to hew a road in the direction indicated by him, through the undergrowth. And now we found that he had been following all this time a way indicated by blazed trees, marked several years ago on each side of the intended road, and seemingly marked without regard to any course, except that indicated by the comparative thinness of the growth, and ease of clearing.

From this point to the lake, about two miles, we worked, clearing the road in advance of the teams, and at last reached a point in the midst of tall trees and dense undergrowth of bamboo and brush, through which there was no sign of further way, and here we halted and General Jackson dismounted and informed us that we were at our journey's end.

Peering through the thicket and bamboo we could see a wide opening or clearing where no timber grew and the banks of what was apparently a lake of about two acres in extent. Accompanied by the General, and dodging along through the thickets, we gained the immediate margin of Shu-Shugar Lake and gazed down in sickening disappointment into its basin. We saw about fifteen feet below what was evidently the ordinary water mark at the roots of the surrounding trees, a still sluggish pool of water apparently not more than two feet deep and covered all over with a thick coat of green pollen from the surrounding trees, with not three feet of open water visible. "My," said Jackson, "how this lake has dried up. The water was up to the foot of them trees when I was here last year," pointing to the trees on the banks, "but," he added hopefully, "this is not the largest lake, that is higher up." He led the way about three hundred yards west, creeping through the bushes along the bank, until we came at last to the largest of what was evidently a chain of lakes. This lake was about four or five acres in extent; when the lake was full the waters had evidently been twelve or fifteen feet deep, but had been evaporated by last year's long drought and there remained now only two or three feet of water in it, but one or two acres of it seemed clear of moss and pollen, and apparently drinkable.

As we had no buckets, and nightfall was upon us, and the teams were too tired to make a return trip to Duncan's ranch, and as horses and men must have water, and water could not be brought to where our teams then were, per force, we resolved to go to water; and with infinite labor with hands and hatchets, we at last cleared a road up to the larger lake, then cleared a way for the teams to get down to the water, and resolved to camp there all night and postpone further move until morning.

Underbrush was cleared for a camping place, a rope was drawn tight between two trees about 12ft. from the ground for a ridgepole, the tent fly was spread across that and made fast to the ground, cots were unpacked, fire built, and all preparations made for the night.

We paid General Jackson for his trouble, and engaged him to return the next morning and pilot us out of the woods, for we became certain at a glance at the still and lifeless water remaining in the lake, that there would be no fishing to keep us here, because in such a drought as had dried up this lake the gars destroy all the fish. And if the hunting should also prove nil, we would have nothing to keep us longer than the morrow.

All camp work done and supper well under way under the supervision of Frank, diligent trial of the lake from all sides and with every kind of bait and artificial device begun in the twilight, but none of us was rewarded by a strike or a bite or a nibble, except our persevering railroad captain, who after some struggle landed a sharp-nosed gar about 2ft. long, which immediately disengaged itself from the hook and rolled down the bank and tumbled toward the water. As our only catch, however, it was too precious to be lost, though the vilest of the piscatory tribe, so as it rolled and tumbled toward the water

M., who was sitting by, sprang up and gathered it just as it got into the edge of the water, and after a struggle captured it and threw it high up on the bank and dispatched it with a club, but in the effort received a stroke from its fang-like teeth upon one of his hands that drew blood.

One hope more remained—the hunting. There must be deer and turkey here. After supper two of our nimrods started out with Winchester and gun, while the rest of us, our ravenous appetites satisfied, sat and lolled on our camp-chairs and cots about camp and rested. No sound of shot heard we during the two long hours of absence of our hunters, and upon their return they reported that they had seen no sign of turkeys and but little of deer, and had failed to catch a glimpse of any kind of game. About 11 o'clock we retired to rest on our cots and in our blankets, listening to the melancholy and persistent inquiry of a solitary owl somewhere near of "Who are you? Who are you?"

Perseverance sometimes brings its own rewards in hunting and fishing as in other things; so the next morning, some time before day, several of our best hunters again started out in search of deer or turkey. They hunted diligently and long, and once we heard the report of a gun; but about 9 o'clock they all returned, bringing a single squirrel, and reported utter and entire failure.

General Jackson having once more made his appearance, we bestowed the squirrel on him, unanimously voted Shu-Shugar Lake a delusion and a snare, lifted our wagons around until their tongues pointed homeward, slowly retraced our devious way through *terra incognita*, following our yellow-jacket guide and his claybank pony, until once more the open daylight shone about us, and the free Gulf breezes cooled us, and timber and canebrake lay all behind us.

We took what comfort we could in fishing for the goggle-mouth perch of Caney, but caught only a few, and those very small; saw one deer as we crossed the timber next to the prairie; had lots of fun shooting plover, when once more on the prairie, and had another first-rate dinner at Dickerson's Point of fat plover, and in good season that that evening reached Wharton, less tired than we had expected to be.

At a subsequent meeting of the party that night in the private car of our chief and captain, we resolved unanimously that never—no, never—no, never, would any one of us ever visit Shu-Shugar Lake again. After much discussion we also resolved that about this particular lake, hereafter, we would tell the whole truth, and not send our fisherman friends down there, which resolution was not passed without a great mental struggle, however. But last, strange as it may seem, to one not acquainted with the congenial qualities of that fishing party, we further agreed that after all we had had a glorious time of it, anyway.

GUY.

## ON THE NORTH SHORE OF LAKE SUPERIOR.

(Continued from Page 533.)

We had determined to leave in the morning and make for Maimaise Point, but when the dawn came there was a gentle but an adverse wind, so we concluded to remain until some favored breeze kissed the waters that would race us along to our destination.

The bright day was before us, and to pass it in dreamy idleness was not our desire. The river presented some contemplation for our restless spirits, and though the trophies we might capture would be of an adolescent character, there would at least be a modicum of sport in it after all. Ned being in favor of the trip, the boys were ordered to the boat and once more we went up the river with the big sugar-loaf mountains on our right blazing in the bright light of the ascending sun.

"Here," said Ned, pointing to an abrupt turn of the river where the channel was undermining a gravelly bank with the bending thickets laying the waters, "is where I captured several fine trout some years ago. But then the water was 2 or 3 ft. deeper and the current like a mill race, but now the famous Aguawa is getting to be a brawling brook with nothing but infantile trout. Those were rare trout days indeed, for during an hour's fishing you had a catch of magnificent trout that would last the camp an entire day. You will see no more such halcyon days, for the greedy market purveyor is reaching out for all the trout obtainable, and has every red-handed pot-hunter on the North Shore engaged in netting, snaring and jigging them. Not only the matured are engaged in it, but every boy that can paddle a canoe or haul in a trout is also engaged in the brigandage. Law and game wardens are given no consideration at all, for the barbarous work is carried on without any attempt at concealment. It now matters little to me, as I am nearing the time allotted to man, but when the new generation comes along, a *Salvelinus fontinalis* on the North Shore will be a rarity indeed. Then the lament will come too late, for the beautiful fish of dappled robes has years ago been exterminated and only lives in memory or the annals of angling literature as the loveliest and most gameful fish that ever swam in surging rapids or sought the rocky chasms of the Great Lake. Ah me!" sighed Ned, "the recollections of my outings on this great reservoir of pure water will be a comfort and solace to me when I am in the 'slipped pantaloons.'" And so the white-haired sportsman continued as if his honest heart were deeply mourning for the illegal slaughter of the tinted innocents. He felt every word he uttered and the maledictions he heaped upon an indifferent government, the semi-barbaric tribe and the market-fisherman were as "black as the damning drops that fell from the denouncing angel's pen ere mercy wiped them out again."

The rapids being reached, Ned's soliloquy went sighing with the vernal airs that quietly moved the treetops and rippled the translucent stream while we prepared for the warfare on the rose-tinted beauties. Ned, being somewhat of a lotus eater, cared not for toilsome tramp, so I left him where we had landed, and with my man Friday, the Ananias of the lake, I began my wandering along the shady banks for the first favorable pool. Reaching it after a long and unpleasant walk over a surface of miniature boulders, I cast my first flies, which were a trifle larger than a gnat, and caught a trout so infinitely small that I instantly returned it to the sinuous stream from whence it had been taken. After a few casts more I hung another that required skillful measurement to make it reach the legal limit. This was all I could entice here, and again we tramp along until we reach a pool partly shadowed by some sprawling cedars, from which some

golden-hued "mimic of the woods" was fairly splitting his little throat warbling his delicious notes. Here reposes a trout, thought I, for all this sylvan beauty must have the spangled naiaid of the brook to make the harmony perfect.

I cast at the edge of a shadow just where a fluttering butterfly was skimming along, and as quick as thought the golden gleam and rapid splash came and then a deceived trout was shooting down for the rippling rapids below; but I head him off with my little Chubb rod and make him fight in the half-shaded pool for his life as a forfeit. Lovely gallant of the jeweled stars, you have a cruel foe man who will not yield to your Circe-like beauty, but who will gloat over every mantling spot and every dash of gold and crimson that beautifies you, as if he were a Titian or a Tintorette. Ah, ha! he tires, but alas too soon, for the pleasing emotion of the angler is too short-lived, the victory too easy. His superhuman efforts at the start rapidly exhausted his vitality, while his weight was not sufficient to prolong the struggle. I led him gently to the shore, where the bronzed-faced Peter netted him with an artistic grace, and then laid him with his golden side to the glistening sun where he soon panted his life away. He was simply a pound trout and would, I know, prove the blue ribbon fish of the day.

This seemed to be the only denizen of this picturesque pool, for not another rise could I obtain in any part of it, no matter what lures I used or how lightly I cast them. He was undoubtedly the autocrat supreme of that lovely basin, and for him alone did the shadows fall and the roses bloom around his isolated retreat.

Onward the march again began, and it was over a bed of boulders just large enough to make it quite tiresome. We finally reach a weird and mysterious ravine from which the purling waters come clear and cool, and

".....where the eddies, so poorly white,  
Sink away into gloom or wheel into light;  
Where the trunk of decaying pine-tree doth throw  
Its leaning bridge o'er the current's flow."

Here we take our stand, and with a blue-dun and black-June the surface of the water breaks in gentle ripples as they seek the quarry. Once, twice, thrice they drop, and then some mother's prettily painted pet in glittering dyes snaps at the blue-dun and suddenly realizes that "all is not gold that glitters." He was of the genus small, but the law legalized him and he was accordingly consigned to the larder. Another Lilliputian of rosy dots and seashell pink was taken by the trunk of an old pine tree, and then cessation ensued from the lovely nurselings.

I look ahead and a gleaming bed of gravel and boulders, once part of the river's bed in high water, lies before me and must be traversed ere we reach another pool. It is a long distance and the sun is in gleaming scarlet, and every rock blistering hot and glowing like an agate. But

"We are beastly, subtle as the fox for prey;  
Like warlike as the wolf, for what we eat;"

and dash ahead with perspiration moistening the shining stones at every footfall. An isolated tree here and there on the river's bank, invites us to grateful shade, while some little rivulets of cooling water, seeking the parent stream through leafy ravines, quenches our thirst, and thereby revives our faded energies. It is tramp, tramp, tramp, but at last we reach the desired pool, to be greeted by our old familiar friend of the wandering brook, a gorgeous kingfisher, who eyes us in wonder from a treetop that overlooks the waters we propose to fish. It is a favorable sign, but halt, he may, like us, have had wolfish aspirations and made the pool tenantless.

We, however, attempt the solution of the aqueous larder, and are delighted at our first venture, for it yields us an eight inch trout. The kingfisher has surely not depleted it, but I have no doubt that he now thinks we will, as he sees the golden fins leaving their element with the fly in their reddened jaws. We lure three more here and then the run on the pool is at an end, and our tree top beauty in plumage bright sails away with the blazing rays of the sun displaying his beautiful colors with heightened effect.

"She rears her young on yonder tree;  
She leaves her faithful mate to mind them;  
Like us for fish, she sails to sea,  
And plunging, shows us where to find 'em."

The pool ahead was too far distant to make that morning, and particularly under such a glaring sun as prevailed, so we retraced our steps, and after a tedious tramp came upon Ned, pipe in mouth, sitting quietly in the boat gazing upward at the mountain ranges. He seemed to be deeply enthused with their boundless crests, their knolls and slopes with rounded woods, their jutting crags with castle or watch tower, their narrow ravines carpeted with greensward and haunted by traditions of fairy and gnome, and the grand and impressive beauty that attach to the towering hills.

Ned, during my absence, had picked up three of the infantile class, and had he not become disgusted with their dimensions could have doubtless caught many more. The memory of the big trout he had years ago impaled here was still with him, and therefore these juveniles that were just budding into beauty had no charms for him at all. He would rather solace himself with the pipe and the loveliness of the grand scenery with which he was surrounded.

It took but a few minutes to bring us to camp, and when there we sought the shade under foliaged branches while the half-breeds busied themselves preparing the meal.

The noon hour was of a tropic nature, the lake unwrinkled, the forest without a moving leaf, while the trumpeting troop of little blood suckers were around in armies for their feast of blood. We succeeded as usual in keeping them at bay with the magic liquid, laughing at their futile efforts to stem the torrent of the subtle odor.

After I had cooled off from the morning's work I concluded that a bath in the icy lake with a change of underclothes would not only make me very comfortable but keenly sharpen my appetite for the meal in preparation. Ned, being in an indolent mood, declined the bath just then, stating that he would take it toward evening when the sun was less piercing.

I found the water so icy cold as I waded in that it fairly made me shiver, and as a consequence the soap suds flew over my anatomy without loss of time, and with a souse or two I was capering over the slippery boulders which lined the bottom for the shore and a towel. A good rub with the rough crash and then after a few finishing

touches with the smooth linen I hastily slipped into clean clothes, feeling as if I had been electrified with heroic strength. In fact, such a bath would have made a beggar imagine he was a prince of the realm. I reached camp just in time for the meal, and I assure you that the table, after we left it, looked as if a famished wolf had been the guest at the feast. Peter informed me during dinner that the Hudson Bay agent was quite sick and suggested that we go over and see him with a view of giving him some relief. Ned said as I had more knowledge of pharmacy and diseases than he, that I take the medicine box and go down to the sick man's cabin and administer the remedy to the best of my knowledge. I at once consented, and as my way lay through the encampment of numerous Indians, who had but lately arrived at this post to receive their pensions, I thought it would be a happy idea to take a dog or two along, which were over abundant here, on which to test the virtues of the medicine, *à la* "Old Sport."

On entering the house of the old agent I found him on a cot moaning and tossing around as if final dissolution were about to take place. His pulse was beating rapidly, his head feverish and great pains distressed him at his stomach. I was satisfied from all indications that a cathartic was about what he needed, and so, the dog not being necessary upon which to test this simple remedy, he was omitted. I immediately gave him the potion, which he took with a very wry face, and then insisting on a reducing regimen left him with full faith in my prescription and a promise to call again if needed.

As I passed through the encampment of Indians on my return, with my professional cares in a great measure relieved, I was more impressively struck with the chaotic scene the camp presented. Men, women, children and dogs were sprawling in and out of tents in a sort of medley, a heterogeneous mass, as it were, in rags, tatters and dirt, looking more like slothful lazzaroni than of the once noble race of the pathless forest. The dogs, however, which they used for sledging in the winter, were getting the worst of the situation, as they were being kicked and cuffed on all sides in a very cruel and unfeeling manner. The whole day through these poor brutes are heard yelping, and altogether they have a very seedy appearance. Their great object of life is to crawl into the huts and carry off something eatable; but they are continually driven out by the women and children, and recommended by a smart blow, to satisfy themselves with the fish and beaver bones thrown out for them. But they soon detect some convenient hole, and—presto! a dozen of them creep into the hut again. For a while they may be left in peace, but when one gets in the way, the kicks and blows begin again, and the dogs bolt with most heart-rending whines. So it goes the livelong day. If you speak kindly to him he does not understand what you mean; he tucks his tail between his legs and slinks off to a convenient distance, where he begins growling. In truth, the Indians seem not merely unmoving, but even cruel to their dogs.

I found Ned on my return down where the "bold merry mermmen are under the sea" undergoing a transformation with a bar of soap, and shivering as if in the last throes of a desperate chill. He soon found an ample recompense in it, and after he had combed out his snow-white locks stood forth in his powerful physique like some giant Old Roman, the hero of a hundred combats.

As we were beyond all danger of quarantine, we felt as if a few games of cribbage would materially aid in passing the idle hours of the afternoon. So at it we went with an active shuffle, cut and deal, and then after the discards, the fifteens and the runs came tumbling over one another with surprising swiftness. The games ran along quite evenly for a while, when Ned, feeling the spirit of a gamester dawning upon him, was for doubling the stakes, while I not only met him but went him two better, making it a quadruple ante. There is no friendship in cards, they say, and it was soon evinced, for we were arrayed against each other as if a kingdom were at stake, playing with a Monte Carlo desperation till supper time, and then Ned cried quits; called me a millionaire, and went looking for his gun as if it alone could only give him solace for his terrible losses. My winnings were enormous, and, of course, gave me great delight and visions of innumerable bonds, stocks, etc., began to dance before my blazing eyes as if there were no end to them. After much time and trouble in stacking up the huge piles of coin I ascertained my winnings to reach a surprising total of \$1.55.

After supper one of our great delights was in watching a colony of fan-tailed fly-catchers that made a tall elm, immediately overlooking our camp, the base of their evening raids. They would assemble to the number of twenty or more, and every few minutes a party of them would sally out and skim along the river and one of its bayous near the mouth, snapping up the flying insects for their evening meal. Sometimes they would all start off together and then divide in small bands, each taking a different direction. The first that returned would give a cheery call and then they would all gather once more upon the same tree. They industriously kept up their search for the nocturnal insects till the stillness had settled down and the soft blue shadows were in their fullness, and then they were off.

"To the solemn shadowy cedars, and ghostly pines so still."

This bird is one of several species of birds forming the Linnæan genus *Muscicapa*, and having a bill flattened at the base, almost triangular, notched or hooked at the upper mandible and beset with bristles. They are so named because they feed entirely on flies and other winged insects.

Peter and Kenosh, after they were through with their camp duties, went up to comfort and console the sick old agent. As he was Peter's prospective father-in-law, and well fixed in worldly goods, the future bridegroom was doubtless looking to the main chance when he extended his aid and sympathy. They returned just before we were to take to our blankets, and reported the sick man much better and in a fair way to soon have a clean bill of health. I was much pleased at my success, for, be it known, I practiced without the necessary "sheepskin." The boatmen declared I was a good medicine man and would be willing to trust me with their lives if they were unfortunate enough to get on the sick list. We were in hopes, when we retired that night, that we would be greeted the coming morn with bright skies and a favorable and spanking breeze that would soon carry us to our destination.

Our sleep was unusually sound, and when we arose in the morning felt as refreshed as if we had partaken of an

invigorating tonic. A glance at the sky, which was steely and cold-eyed, satisfied us that we were soon to have a very radical change in the weather. Determining to go, rain or shine, storm or calm, the order was given for an immediate departure after breakfast. The boatmen were not pleased with our determination to leave, as they were fearful of a rough time. Not liking to be cowed by land-lubbers, they, nevertheless, moved around quite lively and soon had our breakfast served. The meal over we went the boys a helping hand and soon had the boat loaded and were off with a fair breeze filling our sails.

In a very brief time the elements took on an exceedingly serious aspect. The sun, which had a foreboding look at the start, had now completely deserted us; clouds edged with an indigo blue were fast appearing and driving swiftly along, while the wind came with a sad moan that told of a troubled sea. The boatmen displayed an anxious look at this rapid change in the elements, and earnestly scanned the horizon for indications of the weather, but stolidly remained quiet as to their conclusions. The mast now began to bend and creak, the cordage and sails to rattle and the billows to raise high their curving crests with snowy froth. Along sped the stanch and plunging little boat, cleaving the waters as if she rejoiced at their turbulence, and tossing high in air the columned spray from the big combers. It was really a delight to thus glide over the heaving plains, passing in review the bold cliffs that looked down with dark and sullen frown, the great forests of spruce and pine, and the towering mountains around whose pinnacles the vapor clouds were fast forming.

Thus we went dancing along for about six miles, with the music of the sea ever in our ear, and the breeze steadily on the increase. At last the half-breeds spoke up, stating that the wind was changing and bade fair to soon blow over our bow with a fierceness and rage that would evidently puzzle us to find a safe retreat. As Montreal River was about three miles ahead, we instructed the boys to hold her direct for that desired port. It was a wild chase over a wild sea for the coveted haven. We did not reach it, however, with our sails, for about a half a mile this side of the stream the wind struck us square in the face and then it was down with the canvas and in with the oars, and a vigorous and steady pull against heavy and vicious seas that constantly dashed over our bows until we shot into the mouth of the dark river.

We were all glad to make the cheerful harbor, for the boys declared it would have been impossible to have pulled much longer against such a heavy wind which was fast approaching a gale. I suggested a tack at the time, but the half-breeds would have none of it, so we permitted them to have their own way about it. How I would liked to have had one of those Nantucket skippers aboard then. He would have given these timid half-breeds a lesson in navigation that perhaps would have availed them in just such a case as this if they would only take on a little more daring.

The heavens had now become enshrouded in one vast funeral pall, a rippling thunder like the roll of a drum was heard, a sharp flash of red light imprinted itself on a black cloud and then came a sprinkle of rain, a mere preface to some grand battle in the rolling clouds that would soon make its force felt when it reached the parched earth.

No time was lost in erecting our tents, as both master and man went to work with willing hands, and in a brief time the canvas was flapping in the wind and the provisions well under cover. After all this hasty preparation it showered but little, though the gloomy clouds still held sway in the celestial canopy as if they would at any moment give us

"A storm with rival fury heaving,  
From land to sea, from sea to land."

ALEX. STARBUCK.  
[TO BE CONTINUED.]

## BOSTON ANGLERS.

THE later returns indicate excellent fishing at Moosehead Lake. Several Boston fishermen have lately returned, and generally they admit that they have had the best fishing for a long time. Mr. and Mrs. Frank W. Wise, with Mr. J. P. Woodbury, of Boston, accompanied by his son and his son's wife, were quartered at Deer Island, a rather new fishing resort on that celebrated lake and nearer the lower end. Mr. Wise expresses himself as never more pleased with his spring trip. Mrs. Wise, still somewhat of a novice in trout fishing, had excellent luck, landing a five-pound brook trout, a large fish of that class for Moosehead, and several lakereels of good size. The Woodburys had excellent sport also, and were charmed with the trip.

The Harry B. Moore party, of the Inglewood Club, had good fishing at that resort. The scenery was fine, but the fishing was not what it would have been had the water been lower and the season later. Messrs. S. G. Moore, George C. C. Moore, John F. Nickerson, J. Walter Sanborn, Dr. J. C. French of Boston were also quartered at Deer Island a part of the time. Harry Moore expresses himself as greatly pleased with the fishing, and more than pleased with the fishing of his father. That gentleman renewed his boyhood and caught trout again. Everybody was pleased with his enthusiasm. At last he got hooked on to a big trout. He had a good rod, but in his excitement he forgot to use it properly. The fish would suddenly take out a great deal of line, and even when running Mr. Moore would suddenly snub him by holding on to the singing reel—a great strain on the tackle. He would work his trout up to the boat, when it would take out 50ft. of line or would dart downward, and the rod would be stood up on the pointed end, down into the water, with the big fish sulking at the end. Soon the fish wrenched the rod under the boat, or somehow, when it was snapped in several places, and the tip ran down on the line to see what the trout was up to. All this time Harry kept in the boat with his father, lest the old gentleman, in his excitement, should get overboard, as he did a couple of years ago—the son was laughing at the performing of the man and the trout. Finally the trout gave up the fight, and he was drawn in with the line hand over hand, since the rod was broken and the reel would not work. The fish weighed nearly 5lbs. Luckily he was very firmly hooked.

Some of the black bass fishermen are also returning. They have been having great sport at the Belgrade and Winthrop, Me., ponds, notwithstanding there has been a

good deal of broiling sun, as well as days of tremendous thunder showers. Col. H. T. Rockwell, of the Rockwell part to Belgrade Mills, reports excellent bass fishing, and all with the fly. The only drawback to these trout fishermen when they catch black bass is what to do with the bass. Unlike the trout, they are good for nothing to the lovers of trout. Still there are a few anglers who go to these ponds who profess to love the muddy taste of a black bass, and who do have them cooked. These fish have held their own in the Maine ponds that have been stocked with them, and they are proving a drawing card to the railroads and hotels.

Mr. J. Walter Sanborn also had excellent fishing at Moosehead. The weather was rather warm, and the sun was severe enough to blister his hands and arms to some extent. One gentleman, who has fished the Rangeleys for years, says that he has never found anything equal to a pair of old stocking legs for the hands and arms. These can be drawn well up under the coat, and with the feet cut off to let the fingers through, a good sun glove for fishing is formed. If the sun is very hot, the hands and arms may occasionally be dipped in the water, with soothing effect, the stocking legs retaining the moisture for some time. A silk handkerchief should be used to keep the sun off the neck, tied well up under the hat. The brim of the hat should be wide enough to protect the nose.

Mr. Henry J. Thayer, well-known in Massachusetts fish and game circles for his efforts in restoring the game covers of this State, while a member of the restocking committee of the Massachusetts Fish and Game Protective Association, has just brought out a novel trolling spoon for bass and other fish. It has a remarkable feature in that it catches the fish, but does not catch grass and weeds, though armed with several hooks. The hooks are put on exactly the reverse of the usual form.

SPECIAL.

## NEWS FROM THE FISHING WATERS.

FOX LAKE, Ill., June 16.—C. G. Akam and Robert Berger, Jr., started from the Howard House this morning at 10 o'clock with about 50 minnows and returned at 12 o'clock with the following fish in their boat: 22 black bass, 36lbs.; 3 wall-eyed pike, 8½lbs.; 1 pickerel, 7½lbs.; 3 pickerel 12lbs.; 3 silver bass and 1 rock bass, 3lbs.; a total of 66½lbs. Ed. C. HOWARD.

June 17.—If Chicago anglers want good sport and lots of it now is the time to get it up here. Black bass have been taken all last week trolling in deep water along the edge of weeds in the channel connecting Fox Lake and Grass Lake. The labor of casting with frogs in the weeds, however, has not been as well rewarded on this lake as on other lakes very near here and very convenient to get at. Boats may be carted from this point to good bass grounds in less than three-quarters of an hour. One member of the Fox Lake Club, C. F. Hills, brought in a string of 21 black bass last night. The largest weighed about 4lbs. His catch Friday tallied up 31 black bass.

Pickrel are very hard biters now on almost any bait. I caught a good string Friday casting from an anchored boat and using the tail end of sunfish. Yesterday I had even better luck, casting 4½ Skinner spoon bait from boat anchored within 300yds. of this hotel. In less than two hours I landed 20 good-sized pickerel, largest 5½lbs., and lost 10 more, being in no hurry to land any of the fish. All were caught on a light split bamboo 8½ft. bait-rod. C. H. KEOGH.

CRANBERRY LAKE HOTEL, Cranberry Lake, St. Lawrence county, N. Y., June 18.—A. B. Blair, of Scranton, Pa., caught a 10lbs. basket of trout in Cranberry Lake June 12 of good size, the largest weighing 2½lbs. Fishing is excellent, and the trout are taking the fly in nice shape. All game seems to be plenty. Deer are more numerous than for years, while bruin is still on the increase, and many are seen on the borders of this lake every week. Four bears were recently killed, and many more are to be reported later on. AVA J. MOORE.

TWIN LAKES, Wis., June 18.—Very fine strings of fish are being caught here of black bass, pickerel, pike, etc. Mr. E. D. Kohn of Chicago caught yesterday a pickerel 4½in. long, weight 14½lbs., and a pike of 5½lbs. C. H. PAINE.

RAY BROOK, Essex county, N. Y., June 19.—The honors of the season so far belong to George Wingfield, of Montclair, N. J., he having taken a brook trout one day last week weighing 2½lbs. 2oz. from Ray Brook. Mr. Wingfield showed his skill as a fisherman by safely landing his beauty in about 20 minutes; he was using a 5oz. fly-rod. DUNCAN CAMERON.

TUCKERTON, N. J., June 25.—George Burton caught 10 weakfish with hook and line weighing 30lbs., in one hour. S. B. Shourds caught on Wednesday 61 weakfish with hook and line, weighing 280lbs. Capt. J. Shourds and party caught on Saturday, June 23, 200lbs. weakfish. J. W. LEE.

FOXCROFT, Me., June 22.—The landlocked salmon fishing has been very good at Sebec Lake the past week. Steamer Frolic with a party took two salmon June 14, weight 3 and 7½lbs.; June 16, 4 salmon of 5½, 3, 2½ and 1½lbs.; June 17, 4 salmon of 5½, 5½, 2 and 1½lbs. June 21, 5 salmon of 3, 2, 2, 1½ and 1½lbs. Any one wishing information regarding Sebec Lake fishing will receive prompt reply by addressing C. E. PENDLETON.

LAKOTA FISHING GROUNDS, Lakota, Eagle River P. O., Wis., June 22.—Mr. Louis F. Swift and Mr. Samuel Cozens, of Chicago, caught on June 16 here 2 muskallonge, Mr. Swift's weighing 30lbs. and Mr. Cozens's 29lbs. They also caught 50 fine pike the same morning, averaging 3 to 6lbs. each. Mr. D. G. Grey, of Chicago, caught 35 pike single-handed the same morning, also Mr. James Cozens and Mr. F. W. Bipper caught 57 wall-eyed pike the same morning. HARVEY L. GOODALL.

GREENWOOD LAKE, N. Y., June 23.—During last week a party of four, Mr. and Mrs. J. P. Magovern, Wm. Magovern and J. Magovern, in three days landed 114 bass—the largest 3lbs. 14oz., the smallest 1½lbs. Mr. F. Rullman, one day, 27; Mr. F. N. White, two days, 43; Mr. R. H. Moses, two days, 51; Mr. E. Moses, two days, 51. The

Moses Brothers caught each the first day 25, the next each 26—not one fish difference. Mr. P. M. Wilson in one-half day 14. No fish weighing less than 1½lbs. brought in. Mr. William Retisert, brother of Alex. Retisert, the only unlucky fisherman at the Windermere, in two days only landed four fish. A. GILON.

## A Bass with Coal Oil Flavor.

ATLANTIC CITY, N. J.—Last Saturday afternoon, among the lot of fish taken in the pound connected with Young & McShea's ocean pier, there was a beautiful striped bass weighing say 10lbs. This fish was taken home by a gentleman and a portion of it was cooked for supper, which meal was served within three hours of the time the fish was taken from the ocean.

Now comes the strange part of the story. When the cooked portion of the fish was being served, an odor of coal oil was noticed, and when the family attempted to eat it the fish was found to taste so strongly of coal oil, that it could not be eaten.

On the day following, the remaining portion was prepared for dinner by boiling, the lady of the house taking the precaution to change the water twice during the process of boiling. In spite of the precaution, however, the fish was still so heavily impregnated with the taste and smell of the oil, that he needs must be consigned to the garbage barrel.

The object of this note is to ask if you can give any explanation of the fish being in this condition. Is it not a rare occurrence? I may add that the gentleman in whose house the fish was cleaned and cooked assures me that there is no coal oil used or kept about the premises.

R. M. M.

## Delaware River Bass.

DINGMAN'S FERRY, Pa.—Frank Childs, a guest of the High Falls Hotel, caught in one hour in the Delaware River seven bass, heaviest 2½lbs., lightest 1lb.; also a sun fish weighing 1lb. The bass fishing in the Delaware here promises better than ever. Our trout streams also are doing splendidly. PHILIP F. FULMER.

## Fishculture and Fish Protection.

### The Problem of "Good Riddance."

ONEONTA, N. Y.—Editor *Forest and Stream*: It has been proposed by parties here to stock a lake near by with trout. This lake now contains pickerel, perch, bullhead, suckers and eels. Of course they would have to be exterminated before the lake could be stocked.

We would like your opinion as to the feasibility of cleaning out or killing the fish that inhabit the lake. It is impossible to drain the lake. Dynamite has been proposed, but none of our members have had any experience in this work, and some express doubts as to the possibility of thoroughly cleaning out the fish with explosives. There are about 100 acres in the lake and the water is from 10 to 60ft. in depth. If any of your readers have had any experience in ridding such waters of undesirable fish, we would be glad to hear from them through the columns of *FOREST AND STREAM* or otherwise. The lake would be owned by the local association, but there has been some doubt expressed as to the right, legally, to use explosives for clearing out the fish, even then. Any assistance or advice you can give us upon this point will be gratefully received. ONEONTA FISH AND GAME ASSOCIATION.

The New York law forbids the use of dynamite. We have no information of any practicable expedient for accomplishing the desired end. We referred the problem to U. S. Commissioner Marshall McDonald, who writes: "There is no method of fishing known to this office that would entirely exterminate the fishes you mention. I would advise drawing off the lake, but that is impractical in a lake of the size and depth referred to. Should an attempt be made to stock it in its present condition it would require a very large number of yearling trout, and even then the results would be doubtful."

## PUBLISHER'S DEPARTMENT.

For many years the name Colton has been inseparably connected with good maps in this country, and within a year or two we have called attention to a series of new county maps on a large scale published by the house of G. W. & C. B. Colton & Co., 312 Broadway. The latest issues of this series are maps of Rockland county, New York and of Sussex county, New Jersey, which are drawn on a uniform scale of two inches to the mile, and therefore give a great amount of detail useful to the traveler, whether he goes on horse back, in a wagon or by bicycle. They should also be of great value to the angler and to the canoeist. In these maps, which are printed in colors, the roads are red, the water courses, ponds and their names in blue, while the other geography, names of towns, villages, hotels, railroads and so on are in black. Some striking features of the topography are shown. The maps are put up in neat cases for pocket use, and are sold at 50 cents each. Among those already issued are maps of Dutchess, Putnam, Westchester, Staten Island, Long Island, Kings, Queens and Delaware counties, all of New York. There are ten maps of portions of New Jersey and one of the western counties of Connecticut. These will be found very useful to those who have occasion to travel through any portions of the country in the neighborhood of New York. Most of these maps sell at 50 cents each.—*Advt.*

## The Kennel.

All those who love a dog because it is a dog and not merely a medium for the accumulation of dollars and cents, are invited by the editor to consider this department as one in which they can discuss amicably any subject that is of interest to the canine fancy, without fear of their communications being subjected to personal comment or ridicule.

### FIXTURES.

#### DOG SHOWS.

Sept. 4 to 7.—Des Moines Kennel Club, at Des Moines, Iowa. M. Bruce, Sec'y.  
Sept. 10 to 14.—Toronto Industrial Exhibition Association, at Toronto. C. A. Stone, Sec'y.  
Sept. 18 to 21.—Rhode Island State Fair Association, at Cranston, R. I. W. B. Dexter, Sec'y.

#### FIELD TRIALS.

Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallaugher, Winnipeg, Sec'y.  
Nov. 5.—United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.  
Nov. 6.—International Field Trials, at Chatham, Ont. W. B. Wells, Sec'y.  
Nov. 23.—Eastern Field Trials Club, at Newton, N. C. W. A. Coster, Saratoga, N. Y., Sec'y.

**"Moss-Back Robber" Rule and "High Class" Dogs.***Editor Forest and Stream:*

For the past six or eight years I have seen the necessity of a change in all field trial rules, that will allow bitches in season to run in these trials, and was one of the committee which changed the rules in the U. S. Club.

This new rule did not fully agree with my views on the subject, but I was sure a step in that direction was for the best, and if you cannot always get exactly what you want, then I am for the next thing to it, and voted for the change as it now is, believing at the time that by the next meeting of the U. S. Club they would fully agree with me on the subject. The owners of bitches in season should have a show for their money, but beyond a doubt the rules should protect all dogs and give them an equal chance. In case a dog's attention is drawn from his work by running with a bitch in season, the judges should have power to protect him and at once order them to be run in some other manner, and I am sure that no one will suffer in this way by the change of the rules in the U. S. Club. The management and judges I do not believe would allow any injustice of this kind to injure the chances of a good dog even if they have not got the proper rule to cover it. The best dog should always have every opportunity to prove his superiority over his inferior competitor, and it should win, let it be a bitch in season, a high class stud dog, a pointer or a cross-bred mongrel. High class, natural qualities are what we need, and they should be fully tested. Fewer rules and better judges will more fully demonstrate who has the best dogs. I have always worked hard to do away with so many rules. All clubs have had too many, but some of the most important clubs have seen their folly and have cut them down considerably. I have always argued that if judges were not competent that all the rules that could be printed will not make them so. If they are not honest, the more rules they have the more rascality they will work in and try to cover their rascality by arguing that they are judging strictly according to rules; but I am glad to say that these are the exception.

The following is about what I was in favor of in regard to this rule:

"Bitches in season will be allowed to compete in all stakes, but in case they are unduly attracting the attention of their competitors the judges shall at once order them up and run them alone or change the order of running so as to give every dog and bitch in the stake a thorough test without injuring the chances of any dog by the change."

With the above rule no one could have any grounds to protest or say their stud dog's reputation should not be at stake by running with bitches in season. Among high class dogs I will assert that it will not be necessary for the judges to make one change in a hundred, but even if it was the one hundredth time that dog should be protected, and I see no reason why every club in the country should not make the change. It surely cannot injure the club's entry, for the above rule covers every point that might injure any dog, and beyond a doubt bitches in season should be allowed to fully demonstrate what they are capable of.

After an owner has paid, say, \$75 for a pup, \$150 to have it broken and \$80 entrance money to start in a stake, which makes in all \$255 actual expense, in addition to the extra expenses of coming perhaps a thousand miles with a view of seeing the dog start and eventually win, it is not justice to have a little rule, that cannot benefit field dogs in any way, exclude such bitch from running and perhaps discourage her owner, who might be a beginner, and make him quit field trials forever with disgust. If all clubs will only give the above rule one year's trial I will guarantee they will never change back to the old rule; they may change it for something better, which I think they will, as times are improving rapidly every day, and so are all field trial rules and field trial dogs.

Field trials have many drawbacks and many mistakes are made, but still they are gradually improving bird dogs, regardless of the many chronic kickers who stay at home and know more about what is going on and the unjust decisions that are made, and how Mr. Avent and others handle their dogs to win. It makes men who make a lifetime study of dogs and that are in the field with high class field trial dogs from one year's end to another, laugh to hear many of the stay-at-home writers' arguments. If they will only follow the trials one season and see all the work done, and what a difficult task all judges have, they would know more and write less about a high class field trial dog not being a first class shooting dog.

The better field trial dog he is the better shooting dog he can be made.

If many of such writers will only come to my home after the field trial season is over I will fully convince them that such field trial cracks as Count Gladstone, Topsy Rod, Chevalier, Orlando, Tate and others are the greatest shooting dogs that they ever pulled a trigger over, and it will not take a field full of them to give a man all the shooting he wants. You only need one of such high class dogs to shoot over, and if necessary they will work from sun to sun, and from week end to week end. The four-hour races have fully demonstrated that the very highest class field trial dogs are the dogs with enough heart in them to stay day in and day out. Look back at the late Four-Hour Stake of the Eastern Field Trials. At the last cast of the puppy Topsy Rod he started fast in ice and frost, the whole earth was like needles of ice from one to three inches high and the grass was white with frost, but he never let up from start to finish. On his last cast, even after the judges had ordered him up, he made a wide cast in an open clover field and could have gone a mile in it but he saw a likely looking place for birds in a cornfield, across a running creek, and looked to me for permission to go there. Though at a long distance from me I gave him the permission to go and the judges said, "Have mercy on the little fellow and don't send him over that creek to get wet in that cold water—the time is up." But Topsy Rod plunged in the ice cold water and swam over and hunted every inch of the field out before I could stop him, and he hardly made a mistake on his game throughout the race. Count Gladstone also stood up and was sick at the time, but made sixteen good points in the last thirty minutes and won first easily, with Topsy Rod second. Old Chance always finished faster than any dog who ran in the four-hour stake in his day. Orlando won the stake in great shape and Rowdy Rod also downed his competitors and walked away with the \$1,000. I also won with Antonio in the same stake. All of the above are Roderigo's get, excepting Count Gladstone, and he is half brother to Roderigo. Old Roderigo himself would hunt from sun to sun. I have shot over the great old dog Gladstone all day long at a time. Have seen Count Noble work a day at a time and Gath could also stay from sun to sun.

The above eleven dogs are in my opinion the eleven best field trial dogs that have ever been shown in America. There are but few others that nearly approach them for field trial dogs, and beyond a doubt every one of them are and were strictly first-class shooting dogs when put in training for an all-day hunt. Any of the chronic kickers on field trial dogs could take two of these dogs that I have mentioned and put them in proper condition and they could start in for a shoot and let it last from year to year until the dogs died from old age, and they would do high class work for good shooting every time they are taken out. You could hunt one in the morning, the other in the evening, or one one day and the other next day, and they would never quit if kept in proper condition. Such sport and pleasure as such a brace would give and sun a bag of game that could be killed over such a brace, will never be had by your stay-at-homes and "chronic kickers" on field trial dogs, for they will never see enough of

such high class dogs to really know and appreciate what a first-class shooting dog is.

In my mind, the very best and highest class field trial dogs are the very best dogs to make a big bag over, especially if birds are scarce enough to require a good dog to find them. The only trouble is, they require a man with experience and judgment and enough "get up" in him to handle them. No old "grandmother" should want a first-class dog to shoot over. I have noticed that whenever I have a friend to visit me that has had great experience at field trials, he always wants to shoot over my field trial cracks. Why is this? It is because they go in the field knowing that they are out with something that will hunt every inch of the country and find the birds if they can be found. But take what many term my plug shooting dogs; they have to help the plugs hunt, and often fail to find enough birds for a respectable day's sport. The "don't-know" sportsman will argue that those plugs of mine will point. That's all true enough; they will point if you can get them to potter around to where there is something to point. The high-class field trial dog will also point just as well as the potterer and hold his points just as long—that is, if properly broken—and will make fewer mistakes for the opportunities. Such a dog as Count Gladstone, of course, would flush more birds than a plug with the same nose, for this reason: Count would find at least five times the number of birds and cover at least ten times the amount of ground; hence his chances for mistakes are many more than my ordinary plugs. The stay-at-home kind can rest assured that I have many of their favorite plugs, and I expect I see more work of that kind than they do, and that is the reason why I am so fully convinced that the old idea of a high-class field trial dog not being a first-class shooting dog is all rot.

When I was quite a boy I had a lot of these plug shooting dogs, and I could and did kill from 40 to 60 birds a day over the lot with from three to four in the field at a time, and hunted regular all the season; in fact, I was a game slaughterer and prided myself in beating every friend whom I shot with. I thought, like your stay-at-home kind, that my dogs could easily down old Gladstone, but when I met Mr. Bryson at Grand Junction with old Gladstone, that was the first English setter that I ever saw in the field. We hunted him nearly all day, and I was honest enough to say at once that I had never before seen anything like a first-class shooting dog. I honestly believe that I could have taken old Gladstone and easily killed from 50 to 75 birds a day over him alone. He could easily have found eight out of ten coveys in the field with what I then considered four first-class dogs; in fact, the four dogs I had could hardly have got a point with him. I was so carried away with his wonderful performance that I could hardly sleep for thinking about how it could be possible for a dog to have the speed, range, style, nose and staying qualities that he had. At once I fully made up my mind that I would never give up until I had and could breed dogs his equal. If some of the many "chronic kickers" will only come and see, they will be convinced like I was. I had to see before I could believe, although I had heard all about Gladstone.

They are certainly welcome to their opinions, for the more that believe in those kind—the plugs—the easier it is for me to win. J. M. AVENT.

HICKORY VALLEY, TENN., June 10.

*Editor Forest and Stream:*

I am not in favor of revoking the old rule forbidding bitches in season to compete at field trials. I differ with the opinion of those that have been advocating the running of bitches in season with dogs. I have had twenty-five years' experience with pointers and setters. I have owned, bred and handled hundreds in my lifetime and we have at the present time thirty-five in our kennels and my experience is that a dog will not do high class work when he is working with a bitch in season. He pays no attention to his work, for his mind always is on the bitch; but I am in favor of a bitch having a run for the money. I think if all the field trials would establish the following rules there would not be a chance for objection: When a bitch is in this condition let her run with one of her own sex, and should there be no bitch in the stake let the owner provide one to run with her, for under the "spotting system" the judges could easily tell if she was good enough to get in the money; and if she was of equal merit with a dog for first place the dog should have the preference. Owners of bitches in season should be compelled to notify the secretary of said bitch's condition, and he to notify all owners and handlers when dogs are going to compete with her. I have seen dogs that would get so excited that they would not work for two or three hours or as long as the bitch was around. We expect to start two bitches in the International field trials and should be perfectly willing to start them under the above rules, should they be in season. H. MILKINS AND S. HALLAM.

LEAMINGTON, ONT., June 14.

**The English Setter—Sires and Dams.**

BY P. H. BRYSON.

WINNING and non-winning producing dams will first be considered. Of the producing winning dams we find, Peep o' Day, the dam of Gath; Sue, the dam of Gladstone's Boy, Lillian, etc.; Bohemian Girl, the dam of Paul Bo; Florence Gladstone, the dam of Whyte B.; Lillian, the dam of Toledo Blade, Joey B., etc.; Daisy F., the dam of Daisy Hope and Daisy Hunter.

Of the non-winning dams we find Petrel, the dam of Gladstone; Twin Maude, the dam of Roderigo; Rane, the dam of Gloster; Bo-Peud, the dam of Antonio, Orlando, etc.; Fate Gladstone, the dam of Paxtang; Gilly Gladstone, the dam of Rod's Sue, etc.; Juno A., the dam of Rowdy Rod; Ruby's Girl II., the dam of Count Gladstone IV.; Ruby D., the dam of Laura and Miss Ruby; Lotta, the dam of Ollie S.; Belle Belton, the dam of King Noble; Belle of Hatchie, the dam of Bob Gates, Lady C., etc.; Topsy Avent, the dam of Topsy Rod, and Georgia Belle, the dam of Glean's Sport, Glean's Pink, etc. Many other producing dams could be named that never won in a field trial.

From my knowledge of the non-winning producing dams named, many would not be placed in a field trial in ordinary company. It will be seen the preponderance of producing dams were non-winners at field trials, still they produced winners whose blood breeds on. The successful sires on the other hand are winners at field trials, those not winning being the exception.

The question is often asked, "Does the sire or the dam control the progeny?" In some cases the dam does to some sires, to others not. If we could get sires that would always control the progeny, that would not throw back, successful breeding would be reduced to almost a certainty. This throwing back is the stumbling block successful breeders have to contend with. We may know the characteristics of sire and dam, that when mated often throw back several generations and produce something unlike neither. You often see liver and white puppies, when neither sires nor dams had any liver color for several generations. This is throwing back. In throwing back, the characteristics of previous sires and dams appear more frequently than the liver color, accounting for what we are sometimes at a loss to understand, "why the puppies of noted sires and dams are sometimes so different from either." Gladstone is the only noted sire I know of that never threw a liver and white, though he sired one or more lemon and white in almost every litter—his dam Petrel being lemon and white. According to my observation, the liver and white and lemon and white of same litter are more apt to live than the black, white and tans.

The question suggests itself, "Is the same blood that is prepotent enough to produce liver and white and lemon and white more vigorous blood than the blood of the black, white and tans?"

As a rule, you had better stick to families that you know how they have bred for several generations, than breed to a phenomenal specimen that has as many different bloods as sires and dams. It is like throwing dice for a winner, to expect much from such breeding. You may meet with success the first cross, but when you commence breeding their produce you do not get satisfactory results; they commence throwing back. In crossing the setter and pointer, the first cross gives better results than you get afterward; they commence throwing back after the first cross. Wun Lung was a phenomenal dog. We have not heard of any of his puppies that are promising, though we understand that he was bred to good blood. He is one of many I could cite where the combining of many different bloods does not breed on.

You need not expect every time you breed you will produce a Gladstone or a Roderigo. The percentage of grand dogs is greater than the percentage of superior horses or great men, but all horses are not superior, nor all men great. It is important to have pure blood in both sires and dams for many generations to guard against throwing back to inferior blood. Inferior blood is more difficult than liver and white to cross out, and it rarely remains dormant. The proper mating of sire and dam in disposition, size, nervous force, bird finding and many other qualities is important as well as blood lines. The breeders of to-day have confronting them a difficulty that those breeding a few years ago did not have to contend with, complicating the already difficult problem of breeding a winner. On the other hand, the breeders of to-day can profit by the successes and failures of the past. They can see what blood or combination of blood produced winners and breeds on and what does not. The producing blood, Gladstone, Count Noble and Druid-Ruby, has already one or more crosses of this same blood in many of them, necessitating the careful mating of sires and dams that was not so necessary a few years ago, before this blood had been crossed on itself to the extent we find it in many cases to-day.

Some of the greatest winning blood has been bred almost to a standstill as far as producing winners, largely from poor mating, that ought to be producing blood. Unless great care is taken in mating, we will breed our English setters to the level of the Laveracks of to-day. Of late years the Laveracks have not proved the successes of years ago. They are mated simply because they are Laveracks without due regard as to whether they are suited to each other in size, disposition, intelligence and many other necessary qualities where inbreeding is resorted to.

Nervous force is an essential quality in a field trial dog, to impart snap, willingness and ability to do quickly what he can do. For the short heats of half an hour and often less at field trials, necessitating "hustling" from the jump—you have to combine intelligence in order to train him, so he will handle game well and be handled also, and not lose his head at critical moments from undue excitement.

While nervous force is necessary, some dogs have too much of it. Antevolo is one with too much nervous force. She will run a first heat in a trial that is difficult to beat; when she becomes nervous from the excitement of the crowd, etc., she is liable to lose her head in subsequent heats, and not do the uniform high class work in the trials that she does in private. Cincinnati was another, so was Fred W., so was Betty S. The strong nervous force is not so essential in a shooting dog as in a field trial dog, because you have all day to find your game, and it does not make a material difference if it does take a trifle longer time in doing it. This is the essential difference between many field trial dogs and the shooting dogs of years ago.

The craze for extreme quickness (snap) and range demanded of field trial dogs is such that no living or dead dog could have maintained it in an all day's hunt, thus necessitating the breeding of dogs of very much nervous force, to the extent that there are many with more nervous force than can be gotten under control. Many dogs thus bred are unfit for shooting dogs and even the expert handler cannot successfully handle them in the trials.

If bred in right lines, they should be both field trial and shooting dogs. Dogs of extreme snap and range that are deficient as bird finders are in my opinion rated too high by the average field trial judge. This class of dogs are catchy to spectators and catch the eye of many field trial judges, sometimes to the detriment of other qualities that ought to rank high in a bird dog, many assuming that those qualities are the only qualities that a high class dog ought to have, or having these qualities they lose sight of equally meritorious qualities lacking in some dogs of this class.

The extreme range often without judgment that is the craze of to-day, I contend, is not necessary for bird finding. No dog can have too much speed for me, if he will find and handle game. I have seen too many with too much range without judgment. I will illustrate this point by incidents happening at the last Southern trial.

Amethyst was the fastest dog that ran in the Derby, if not in the Southern trials. She had more speed and range than Bessie Shoupe, still the latter found all the game and did all the point work when they met.

Glean's Pink did all the point work on game when he met Blue Ridge Mark. Mark had the most range at the start. Antevolo found all the beavies and did the most point work when she met Kent Elgin, Kent having the most range. Count Gladstone IV. did not find as many beavies in the series of three heats he ran as Tremont did in the series of three heats he ran, Count missing many beavies known to be on the ground he was hunted over, but Tremont found all the beavies known to be on the ground he was hunted over, Count Gladstone IV. having the most range (hunting over the same ground several times each dog ran over, demonstrated the number of beavies on same).

We ought to breed to sires and dams that will transmit bird-finding, with other good qualities. I have heard many say of a dog "he is a bird-finder, but not a high-class dog." Some dogs that range out of sight their owners call high class, though not bird-finders, while others are game-finders, though not called high class and do not have to range out of sight to do it.

We have reached the maximum necessary in speed, range and nervous force; let us find sires and dams that combine bird-finding with these and other essential qualities in a bird dog.

MEMPHIS, TENN., May 8.

**Illusion or Shadow.***Editor Forest and Stream:*

I wish to call your attention to the peculiar effect produced in the photograph of Glean's Sport in June 16 issue. If you will hold the paper off about 16 in., and look at the dog you will see that the top line of the baseboard of the fence in the background is sharply defined right through the dog, crossing his chest and to his hips below the hip joint.

It must be an illusion, of course, as I do not see how any shadow could be deeper there, than above, as the shadows giving shape to the chest should be rather triangular in shape, extending higher up under the forearm, as a faint outline can be traced in the same photo. I suppose the light was behind the camera, and should therefore fall on the side of the dog equally, subject to the laws of lights and shades that give shapes and forms. The effect striking me as peculiar is why I mention it. W. W. TITUS.

WAVERLY, MISS., June 16.

[Some of our "amateurs" can perhaps explain this seeming illusion.]

## DOG CHAT.

In a contemporary we notice a letter primarily caused by the confusion relative to the title of champion and the erroneous idea that the word "challenge" may also be used in front of a dog's name which is eligible to that class. As there seems to be a question as to whether one is not perfectly justified in saying challenge So and So, it may be well to explain this for the benefit of those who are not well versed in the titular order of things under A. K. C. rules, and also for those who should know better. When a dog has won four first prizes in an open class he is compelled to compete in the challenge class. This, however, conveys no particular distinction upon the dog except the fact that he is entitled to compete in presumably better or higher company. In this class he is expected to win three first prizes, and one of these first prizes must be won at a show in which there are 500 entries. Upon winning the third prize under the above conditions the dog becomes entitled to be called "champion" without any further competition, and this is the only title a dog may aspire to under our show rules. Challenge So and So is meaningless, except that it shows that the dog is in the challenge class. One might as well say "open So and So" in distinction to puppy or novice class dogs. A ruling should be made by the A. K. C. regarding this misuse of the word "challenge" as a prefix, as its use is apt to put a fictitious value on a dog with those who are not conversant with the canine roll of honor.

Some people will tell you that blood is thicker than water, but if the water is represented by a favorite dog the intention of this old saying is often reversed—the exception that proves the rule, probably. Mrs. Kunigunda Kugler was evidently attached to her Skye terrier, Bobby, for when her will was filed in the Surrogate's office of this city, one day last week, it was found that while she had cut off some of her nearest relatives with the proverbial shilling—in this case represented by \$1—\$300 was left in trust for the faithful Bobby. In her will Mrs. Kugler gives her reasons for leaving the relatives in the cold, and goes on to say: "In consideration of keeping my dog Bobby, a Skye terrier, until he dies a natural death, I give unto Mrs. Caroline Scholl, to apply for this purpose, the sum of \$800 and my wearing apparel, and I hope she will give him such kind treatment as the poor animal was accustomed to while in my care."

"What ails you, Tige?" "If there's anything I despise it's a tramp mean enough to wear trousers over a wooden leg."—*Life*.

On the occasion of the dog show in Paris a French statistician has published an estimate of the number of dogs at present to be found in that city. After informing the world that there are no fewer than 80,000 of them, he proceeds to speculate on the number of persons who are kept awake by their barking. On an average he thinks, one dog in ten would be restless and inclined to bark during the night, and on this basis he arrives at the dreadful conclusion that there are in Paris, at all times, at least 8,000 persons who cannot sleep from this cause alone.

Another good dog has gone the way of all flesh, though in this instance his death was hastened. The well-known mastiff champion Merlin has been ailing ever since winter, cold or injury having affected his spine and hindquarters so that he was very much crippled. Mr. Hughes put him out of misery, June 18. Champion Merlin, as his title denotes, was a frequent winner at our shows, and was by champion Iford Caution out of Bess, and whelped May 18, 1888. Mr. Winchester had him, and Mrs. Charles Wallace owned him at the time of death. Merlin was in every sense a true mastiff, handsome, companionable and of excellent disposition. Although he was practically helpless and had to be lifted from his bed, Mr. Hughes remarked "that it was a pleasure to do all you could for him, as he was such a perfect gentleman in every way—some people will say that animals cannot be refined in manners, but I maintain emphatically they can." Of course they can.

### Rufford Ormonde.

There is a well known advertising picture of the boy "that won't be happy till he gets it," and that is just as "Bob" Armstrong felt about Rufford Ormonde, the celebrated collie. A month hence this grand dog, that has just secured the title of champion in England, will cross the water and become one of the lords of the harem at the Cragston Kennels, owned by Mr. J. Pierpont Morgan. The purchase of this dog, which seems to be generally acknowledged as the head of the collie fancy in England, places American collie-dom in the very front rank. Here he will renew the acquaintance of his old antagonist Sefton Hero. Two such grand dogs as these in one kennel is almost enough to dishearten competition, but the owners of other kennels will surely admire Mr. Morgan's pluck and enterprise in securing the very best dogs of the breed so that American breeders may improve their stock, for we understand that members of the Collie Club and others are allowed the services of these dogs to approved bitches. Rufford Ormonde has won pretty nearly all the honors that he could do in the old country, and ended his show career there as stated last week by winning the 60 guineas challenge cup once more at the Collie Club show in London. He will stand at stud for one month for the good of English breeders and then sail for America. This dog's career does not require repetition here, it is so well known to all collie men, and there has been no importation that will stir up the fanciers so much since the coming of Sir Bedivere, Christopher, Sefton Hero, etc. Rufford Ormonde has won 120 firsts, specials and cups and is three times winner of the 60 guineas challenge cup. He is a young dog yet, and is by Ormskirk Chrissie out of Princess Margaret, whelped June 3, 1891. He is a sable and white dog and bred by Mr. Thos. H. Stretch. FOREST AND STREAM has hinted more than once that this dog had been the subject of negotiation, and our readers will be the first to have news of his purchase. That Mr. Armstrong will now be still prouder of his team goes without saying.

The owner of the Kilmarnock Kennels, of Boston, Mass., Mr. Faxon, has, we are sorry to learn, got into difficulties with his employers and his collies and other live stock were sold by the sheriff of Norfolk county, Mass. The collies in this kennel, while not of the first water, have won numerous prizes at New England shows, and in former years the Kilmarnock Kennels was a familiar name in our catalogues. As usual at such forced sales the prices realized were ridiculously small. The dog Renown, that has won several times, was sold for \$26. The well known bitch Mother Shipton, that was imported at a cost of something like \$500 a couple of years since, went for \$22. In all, fifteen dogs were sold, and buyers had practically their own way about it.

A meeting of the National Beagle Club of America will be held at the A. K. C. rooms, 44 Broadway, New York city, Monday, July 2, at 3 P. M. Members of the executive committee are earnestly requested to attend so that arrangements may be made for the coming field trials.

Dr. M. Halphide of Mitchell, S. D., intends to start a St. Bernard kennel this season. He has just purchased and received Lady Buff (25,667), by Plinlimmon out of Maud. He now wishes to purchase or obtain services of a good stud dog in that section.

Forest and Stream Pub. Co. has issued in book form "Field Trial Training" by Luke W. White. This able treatise on training was, it will be remembered, published in serial form by the now defunct *Fanciers' Journal*. This little book will be found both practical and interesting, and from Mr. White's large experience in field trial work his opinions and methods should prove valuable even to the professional. It also shows the amateur at once the difference between the training of dogs for field trials as conducted at present and that required for ordinary shooting. The book is interspersed with sketches of several noted field dogs, and the low price of 25 cents places it within reach of any one.

Jos. Lewis, of Moodus, Conn., has sold his winning greyhound pup Hattie M., by Gem of the Season out of Wild Rose, to Dr. Q. Van Hammell, of Indianapolis, Ind. As this is a more than ordinarily well-built bitch, the Doctor should bring her well to the front. She won first in open bitches and puppy class at Boston this year.

We are indebted to Mr. H. G. Trevor, owner of the Meadowmere Kennels, for a handsome photograph of his crack poodle Milo. Mr. Welby, of Tamaqua, Pa., seems to be going in for the breed in good earnest, as he has just purchased about \$500 worth of dogs from this kennel, the latest addition to his kennel being the good bitch Bess, now in the challenge class. Mr. Welby expects to show this fall, and, therefore, the poodle entries promise to be very large, comparatively speaking. Mr. Trevor has about sold his entire stock of grown dogs, and has recently sent abroad for a new supply. We regret to hear that the kennel has had hard luck with their young stock. Mr. Trevor deserves the thanks of the fancy in his efforts to place the black poodle so far in the lead among fancy dogs.

One of the largest deals in St. Bernards ever known in this country, is that whereby Col. Ruppert has transferred almost his entire kennel to Mr. Fred Schmidt, owner of the Hell Gate Kennels, Astoria, L. I. The list includes such well-known animals as Kingstonian Count, Kingstonian Countess, Kingstonian Beauty, which trio, it will be remembered, Col. Ruppert purchased from Mr. George Booth's kennel in Hull, England; Altonette, the long-priced but disappointing one from Mr. Smith's kennel; Countess Madge, one of the best shaped headed ones in the country, and only ruined by her lack of markings; Signa, Miss Amanda, San Franciscoan, and lastly Royal Duchess and Empress of Contocock's well-known daughter Bellegarde. This gives Mr. Schmidt one of the strongest kennels of breeding stock in the country, and if they are bred judiciously should turn out something good. The price paid for the lot is said to be about \$1,300. This sale about clears out Col. Ruppert's kennel, having left only Empress of Contocock, Miss Anna and Bellegarde's last litter of puppies. These, we are told, have been sent up to Col. Ruppert's Poughkeepsie farm.

Mr. Thiman, owner of the Hermitage Kennels, also purchased from the Dutchess Kennels the rough coat Baroness Cardiff. His smooth dog Chester seems to be doing well in the stud, having sired one hundred pups in eight litters. Empress of Contocock is now heavy in whelp to him, and she is well known as a shy breeder. Mr. Thiman has also bought a smooth dog, litter brother to Mr. Link's Ashland Jumbo, that is said to be the tallest dog going just now, as his owner avers he is 36in. at shoulder and has a skull measure of 30in. If the tape did not stretch this is great measurement.

Mr. E. J. Hearle, owner of the Speedway Kennels, writes us: "Just a few lines to let your many readers know of the death of my St. Bernard bitch Princess Alma, formerly of the Wyoming Kennels. She had been one of our most prolific breeders in her day, and though past her usefulness as a brood bitch, is still a great loss to me. I attribute her death to old age mostly, as she was found dead in her kennel."

Mr. Henry Brooks in a chatty letter tells us that Wankie Freda, first in puppy class at Boston, has just whelped a nice litter of seven to Tires. Wankie Gerda, third in puppies at the same show, they have sold to Mrs. Fessenden, of Chestnut Hill, Mass., also a promising young dog to Mr. G. Dorr, of Boston, and both these purchasers intend to show. The youngsters in the kennel are all doing well and there is said to be a coming champion in a pup by champion Tires ex Cublean, and it should be from such "purple" breeding. The prospects for this breed becoming quite popular are very bright just now.

## POINTS AND FLUSHES

[By a Staff Correspondent.]

### Dogs and Values.

AN eminent handler and breeder inclosed a letter to me, which he had received from a prospective purchaser, and which he presented as one of many instances in which purchasers desire to get a valuable dog at a cheap figure. I quote from the letter the following extract: "If you have a Gordon or an Irish setter thoroughly house and gun-broken, and warranted thoroughly trained on quail, and a good retriever for ducks, write to ——. Price must not exceed \$35, and delivery to be made by express C. O. D. at once."

It is very probable that the inquirer, who penned the foregoing, did not know the real value of a dog possessing the nice qualifications which he so frankly desired.

As a retriever, apart from all other considerations, a fairly good performer would be worth more than \$35. It would be worth more than that to train him. If well-bred and a good specimen, he would be of more value with no training than the sum mentioned.

If there is a demand for anything, the labor, skill and expense of producing the article and excellence of it, are all factors in the estimate of values. If the standard of value for trained dogs gets below the cost of living and a fair remuneration, handlers would be forced to withdraw from their profession and engage in other business. Training as a profession entails many hardships. The itinerant handler leads largely a life of isolation, hard fare and worse lodging. All are exposed to the extremes of hot and cold weather, and the work itself is a combination of constant study, attention and laborious physical effort. There is a constant expense to be incurred from day to day in providing food for dogs, and in a small country town or miles from even such a town, providing food for a number of dogs is attended with many more difficulties and greater expense than is the same in a city. In short, to breed and raise a dog and to train him well, which takes ordinarily from six months to a year, give the dog a value of at least \$150, if he have the qualities desirable in a good shooting dog.

It is rather inconsiderate to offer a sum for a trained dog, which would be but little more than what was expended for food which he consumed in raising him.

Still, in the laws of trade, if a man purchases intelligently, he generally gets that for which he pays. The \$25 dog is generally that grade of a dog, and the same is true of guns, horses, busses and ships. Even an \$80 suit of clothes for \$20 often fails to produce the blissful contentment anticipated in the wearing or the adornment. There are extremes where one can be foolishly saving or foolishly lavish in expenditure.

The Northwestern Field Trial Club has postponed its trials

until 1895. Mr. Heywood-Lonsdale offered a championship cup similar to the one given last year to be competed for this year. A resolution was passed thanking Mr. Lonsdale for his generous and unsolicited offer, and asking him to let it be competed for next year. The principal reasons trials are not held this year are that Mr. Thomas Johnson, the pioneer and leading spirit in field trial competitions, announced his retirement as a competitor, and though earnestly solicited to reconsider his determination, he could not be prevailed upon to do so. Coupled with this the fact that members had been very unfortunate in losing by distemper their Derby entries, it was felt that the trials had best be abandoned for this year.

I understand that Mr. W. B. Wells, the secretary of the International Field Trials Club, will be asked to judge at the Manitoba field trials this year.

The well-known trainer Mr. Stoddard, who is now in Winnipeg, Manitoba, writes me that there is a prospect of a large entry at the field trials in Manitoba this fall. Messrs. Arent, Rose, Titus, Smith and Hammond think of coming from the States and two or three from Ontario, Canada. Further he says: "The weather is very dry—fine for hatching birds. All say there were thousands left for seed, so there should be a big crop. I am getting my dogs together in the city and will move out later on. The summer sports are on here in full blast, more to the square inch than any town of its size in America, I think. There are three gun clubs. They got me into one, it has over sixty members; shoot every week day (in squads), all could not shoot same day. Begin at 7 P. M., but this does not set until nearly 9, rises a little after 4 A. M. This state of affairs hardly gives a trainer a fair chance, but by beginning early he can get in a fair day's work."

From a letter from Mr. Tower, I gather that the sportsmen of North Ontario, Cal., will shortly organize a field trial club that will hold trials on an amateur basis. The prizes will be medals instead of cash, to be awarded to dogs handled by their owners. The club will be composed of men who desire to have everything of a business nature eliminated from field trials; men, as Mr. Tower says, "who are in it out of pure sportsmanship." B. WATERS.

909 SECURITY BUILDING, Chicago.

### Game to the Last.

Editor Forest and Stream:

One hot day last week S. S. Batley, secretary Mitchell Coursing Club, was out exercising his two greyhounds Bud and Lady, by Tulu ex Vixen, and which have appeared at Mitchell and Huron meetings. They were unfortunate enough to strike one of those real healthy jacks, and the consequence was, before night both dogs died. Mr. Batley thinks they may have been poisoned, but I do not, as I lost a good dog some two years ago in the same manner and the symptoms were the same. Nevertheless his English blood will not allow him to quit the game, but he will at once endeavor to secure something still better for the fall meetings. NOMINATOR.

MITCHELL, S. D.

### A New Role for Gordons.

Editor Forest and Stream:

Mrs. J. E. Montgomery of Memphis, Tenn., had the misfortune to lose by poison a fine Maltese mother cat, leaving two kittens to perish from hunger. The lady has a warm heart and clear head for pets, especially in distress and danger, so ordering her beautiful Gordon setter bitch Olive to "down charge," she dropped warm milk on Olive's dry breasts and placed the kittens there to nurse. This was continued a few days and then the setter's milk came free, and she now has a fat and frolicsome very "happy family." W. A. WHEATLEY.

MEMPHIS, Tenn., June 13.

## KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

### NAMES CLAIMED.

Prepared Blanks sent free on application.

Scalper, Next, Master Waggles, Dress and Rex K. By J. H. McTague, Omaha, Neb., for black cocker spaniel dogs, whelped Feb. 24, 1894, by McTague's Cherry (champion Red Jacket—Branford Bonita) out of Black Gyp (Hector—Black Meg).

Lord Breckenridge and Lady Pollard. By D. C. Luse, Great Bend, Kan., for black greyhound dog and bitch, whelped May 25, 1893, by Norwegian out of Dick's Darling.

Netherwood Farm Kennels. By W. Talmann and S. B. Wheeler, Plainfield, N. J., for their training and boarding kennels.

### BRED.

Prepared Blanks sent free on application.

Nellie L.—Mark 'Em. C. H. Lee's (Providence, R. I.) English setter bitch Nellie L. (Prince L.—Sadie B.) to P. Volker's Mark 'Em (Monk of Furness—Alxua), March 16.

Careless—Heather. J. D. Bush's (Wilmington, Del.) bull bitch Careless (Donkey—Hot Hampshire Nettle) to C. A. J. Smith's Heather (Harper—Ashton Belle), May 9.

Miss Nino—Young Signal. N. E. D. Huggins's (Peoria, Ill.) Irish setter bitch Miss Nino (Elcho, Jr.—Nino) to G. O. Smith's Young Signal (Signal—Woodbine), April 13.

Rose Norwood—Young Signal. Burt & Smith's (Wheeling, W. Va.) Irish setter bitch Rose Norwood (Glencoe—Flora) to G. O. Smith's Young Signal (Signal—Woodbine), May 30.

Bether Berwyn—Doctor Druid. McCullagh & Smith's (Wheeling, W. Va.) English setter bitch Bether Berwyn (Dashing Berwyn—Dryad) to G. O. Smith's Doctor Druid (Frank S.—Victoria D.), May 1.

Pet—Duke of Kent II. Glen Rock Kennels' (Boston, Mass.) pointer bitch Pet (champion King of Kent—champion Belle Randolph) to their champion Duke of Kent II., April 10.

Jingle Bells—Molton Banner. Rinada Pointer Kennels' (Massachusetts, L. I.) pointer bitch Jingle Bells (Underwriter—Juno) to Glen Rock Kennels' Molton Banner (Saddlebags—Molton Broom), May 5.

Wanda—Molton Broom. G. W. Lovell's (Middleboro, Mass.) pointer bitch Wanda to Glen Rock Kennels' Molton Banner (Saddlebags—Molton Broom), May 25.

Jane—Count Noble. Miss A. Nickerson's (Providence, R. I.) Gordon setter bitch Janeet (Beaumont—Belle Stephen) to her Count Noble (Ben Butler—Belle), April 7.

Black Gyp—McTague's Cherry. J. H. McTague's (Omaha, Neb.) cocker spaniel bitch Black Gyp to his McTague's Cherry, Dec. 27.

Fanny K.—Frank Forest. H. L. Kreuder's (Nanuet, N. Y.) beagle bitch Fanny K. (Don—Goodwood Nellie) to champion Frank Forest (Riot—Skip), April 18.

Lou—Frank Forest. H. L. Kreuder's (Nanuet, N. Y.) beagle bitch champion Lou (Keno—Fly) to champion Frank Forest (Riot—Skip), June 10.

Lonely—Frank Forest. H. L. Kreuder's (Nanuet, N. Y.) beagle bitch champion Lonely (Careful—Lovely) to champion Frank Forest (Riot—Skip), May 2.

Welcome—Roy K. H. L. Kreuder's (Nanuet, N. Y.) beagle bitch Welcome (Leap—Topsy) to champion Roy K. (champion Rattler III.—Dora), May 26.

Fanchette—Roy K. H. L. Kreuder's (Nanuet, N. Y.) beagle bitch Fanchette (Mac—Fanny K.) to champion Roy K. (champion Rattler III.—Dora), June 6.

Zillah—Frank Forest. H. L. Kreuder's (Nanuet, N. Y.) beagle bitch Zillah (champion Racer, Jr.—Nellie) to his champion Frank Forest (Riot—Skip), June 3.

Norah K.—Frank Forest. H. L. Kreuder's (Nanuet, N. Y.) beagle bitch Norah K. (The Rambler—Emeline) to his champion Frank Forest (Riot—Skip), June 6.

Gay—Roy K. H. L. Kreuder's (Nanuet, N. Y.) beagle bitch Gay (Roy—Kitty) to his champion Roy K. (champion Rattler III.—Dora), June 16.

Queen of the Forest—Roy K. H. L. Kreuder's (Nanuet, N. Y.) beagle bitch Queen of the Forest (champion Frank Forest—Ina) to his champion Roy K. (champion Rattler III.—Dora), April 14.

**Bella II.**—Roy K. H. L. Kreuder's (Nanuet, N.Y.) beagle bitch Bella II. (champion Racer, Jr.—Belle Rockland) to his champion Roy K. (champion Ratter III.—Dora), April 17.  
**Burlington Diadem**—Brittle. H. W. Lacy's (New York City) fox-terrier bitch Burlington Diadem (Suffolk Coronet—Baccante) to H. W. Smith's Brittle (Brick—Vamp), April 5.  
**Ruby Bonahue**—Roundy Jack. T. W. Stoutenburgh's (Des Moines, Ia.) English setter bitch Ruby Bonahue (imported Dick Bonduh—Field's Osette) to Gleason's Bowdy Jack (Rowdy Rod—Flame Gladstone), April 24.  
**Jean Beaufort**—Strideaway. Mr. Eaton's Jean Beaufort was bred to Strideaway April 22, not May 22, as given.

## WHEELPS.

## Prepared Blanks sent free on application.

**Bessie Kakas.** Glen Rock Kennels' (Boston, Mass.) pointer bitch Bessie Kakas, March 10, six (four dogs), by their champion Duke of Kent II.  
**Ridgeview Patch.** Glen Rock Kennels' (Boston, Mass.) pointer bitch Ridgeview Patch (Beppo III.—Lady Norrish II.), April 24, nine (seven dogs), by their champion Duke of Kent II.  
**Beauty.** C. B. Rutan's (West Orange, N.J.) Gordon setter bitch Beauty (Don—Belle), April 23, fourteen (seven dogs), by Miss S. A. Nickerson's Count Noble (Ben Butler—Belle).  
**Josephine II.** Dean's (Providence, R. I.) Gordon setter bitch Josephine II. (Leatherstocking—Josephine), March 23, seven (four dogs), by Miss S. A. Nickerson's Count Noble (Ben Butler—Belle).  
**Lady Maud.** E. O. Tucker's (Providence, R. I.) Gordon setter bitch Lady Maud (Ranger B.—Countess Whip), May 23, seven (four dogs), by Miss S. A. Nickerson's Count Noble (Ben Butler—Belle).  
**Black Gyp.** J. H. McTague's (Omaha, Neb.) cocker spaniel bitch Black Gyp (Hector—Black Meg), Feb. 24, eleven (eight dogs), by his McTague's Chet (champion Red Jacket—braford Bonita).  
**Zillah.** H. L. Kreuder's (Nanuet, N.Y.) beagle bitch Zillah (champion Racer, Jr.—Nellie), Jan. 10, five (two dogs), by his champion Frank Forest (Riot—Skip).  
**Norah K.** H. L. Kreuder's (Nanuet, N.Y.) beagle bitch Norah K. (The Rambler—Emeline), Jan. 6, six (two dogs), by his champion Frank Forest (Riot—Skip).  
**Fanchette.** H. L. Kreuder's (Nanuet, N.Y.) beagle bitch Fanchette (Mac—Fanny K.), Jan. 21, five (four dogs), by his champion Roy K. (champion Ratter III.—Dora).  
**Gay.** H. L. Kreuder's (Nanuet, N.Y.) beagle bitch Gay (Rover—Kitty), Feb. 2, five dogs, by his champion Frank Forest (Riot—Skip).  
**Daphne.** H. L. Kreuder's (Nanuet, N.Y.) beagle bitch Daphne (champion Royal Krueger—Baby W.), April 18, four (two dogs), by his champion Frank Forest (Riot—Skip).  
**Burlington Diadem.** H. W. Lacy's (New York City) fox-terrier bitch Burlington Diadem (Suffolk Coronet—Baccante), June 16, two bitches, by H. W. Smith's Brittle (Brick—Vamp).

## SALES.

## Prepared Blanks sent free on application.

**Duke of Kent III.** Blue belton English setter dog, whelped March 26, 1894, by Kent III. out of Countess Addie, by A. E. Davis, Worcester, Mass., to Dr. F. S. Hopkins, Boston, Mass.  
**Duke Noble.** Black and tan Gordon setter dog, whelped March 15, 1894, by Count Noble out of Josephine II., by Miss S. A. Nickerson, Providence, R. I., to Mrs. O. Wunsch, Pawtucket, R. I.  
**MALDEN, Mass., June 19.**—Editor *Forest and Stream*: In your current issue in Kennel Notes appears the notice of a visit to King Bannerman of Jeannette, the respective owners Debonair Beagle Kennels and E. L. Bryant. The breeding of Jeannette is given in the notice as by champion Bannerman. Is this correct? The breeding given me at the time of obtaining one of Jeannette's puppies, says she is by Bannerman II. (6,911) ex Constance; also that her registered number is 10,724. Kindly say which is correct.  
 [You are right. Jeannette is registered by Mr. Bryant as by Bannerman II. out of Constance.]

## ANSWERS TO CORRESPONDENTS.

J. P. M., Erie, Pa.—Give your mastiff proper exercise and good food. There is no method by which you can bring her in season.  
 C. O. T., Saratoga Lake, N. Y.—You had better insert a "Kennel Special," stating what you want. We do not know at present of a trained setter.  
 H. G. C., Philadelphia, Pa.—By boardhound we presume you mean great Dane. You could probably secure a good bitch by stating your want in a *FOREST AND STREAM* Kennel Special.  
 C. F. M., Lansingburgh, N. Y.—Josie H., by Jeff II. out of Vaneta, by Waller's Race out of Rose, by Rufus out of Stoddard's Duchess. Jeff II. by Grouse out of Gyp. Dittmar is by Joe out of Queen, by Rexford out of Anne Boleyn; Joe, by Ronald out of Nellie B.  
 J. D. B., Wilmington, Del.—It is a common thing for a bitch to remain in poor condition while in whelp, even though she eats a good deal. It would be best to treat her for worms at once. There is no danger, providing you do not use very drastic measures. You will find good vermifuges advertised in our business columns.  
 H. S. W., Rochester, N. Y.—Sir Bedivere is by Nero III. out of Bena, by Bayard out of Freda, by St. Nicholas out of Juno II.; Bayard, by Bosco out of Juno; Nero III., by Boniface out of Bessie II., by Bayard out of Hebe; Boniface, by Bayard out of Luna. Gundred is by Baron Cardiff out of Cameo, by Philimmon out of Gehemiss, by Rollo out of Berta; Philimmon, by Pilgrim out of Bessie II.; Baron Cardiff, by Philimmon out of Donna Bayard, by Bayard out of Duchess.  
 J. W. R., Akron, N. Y.—The Laverack setter is a strain of English setter originated by Mr. Edward Laverack. We cannot of course tell you whether your dog is a Laverack unless you give its pedigree. The color is blue or lemon and white belton, that is, white, with black or lemon ticks. The Gordon color is black and tan; main color is jet black, with tan marks over each eye, on muzzle, down part of forelegs and feather to elbow, inside of thighs, vent and shoulder points and inside of ears. White is not desirable, though there is often a little on the chest. 2. One service is generally considered sufficient.  
 C. E. B., Hyde Park, Mass.—What is the matter with my St. Bernard dog and what shall I do for him? Red blotches appear on different parts of his body and neck and across shoulders. They discharge a watery matter and he scratches them raw. Ans. Treat for worms. Give following mixture:  
 R. Mag. sulph. . . . . 5i  
 Pol. carb. . . . . 3i  
 Sod. carb. . . . . 3i  
 Aq. ad. . . . . 3 viii  
 Give one tablespoonful morning and evening. Wash the dog twice a week in a solution of creolin (1oz. to pail of water).

## Hunting and Coursing.

## FIXTURES.

Oct. 23.—New England Beagle Club, at Oxford, Mass. W. S. Clark, Linden, Mass., Sec'y. Nominations close Oct. 1.

 Nov. 7.—Northwestern Beagle Club, Louis Steffen, Milwaukee, Wis., Sec'y.

## Col. North's Greyhounds.

THE most important sale of greyhounds that has taken place for some time was that of Col. North's noted kennels. Young Fullerton, counted about the fastest dog in England, was, we believe, bid in, but not till the price had reached \$5,250. He will, we learn later, go to the Russian Imperial Kennels. The *Referer*, in its account of the sale, says: "The weather was rather dull when the first saplings were put on the bench. Lots 6 and 7, a couple by Young Fullerton out of Myrtle Queen, a brindle and white bitch and brindle dog, soon set the heads nodding. Mr. Crosse securing both at 100 gs. each. Several then went cheaply, but five out of a litter by Needham out of Miss Benkwith made 140gs., the highest being 30gs. The next litter to cause considerable attention was four by Young Fullerton out of Sparkling Gem, the highest priced one knocked down being a brindle dog for 49gs.; but it is doubtful if it changed hands. Soon after these came a litter of six, three of which are entered for the Produce Stakes, Kidgevay Club, Latham, in October next. The first two, Hawkesbury and Ochiltree, were taken for 51gs. and 50gs. respectively by Mr. H. E. Smith and Mr. Morgan, Mr. Hamar Bass taking the remainder for one of which he gave 50gs. Five followed by Needham out of Mrs. Hutton, Mr. Morgan obtaining three—Nata (39gs.), Nineteen (40gs.), and News (41gs.). Russley, Found Again and Mongo, by Herschell out of Navette, all went to the bids of Mr. Hamar Bass for

40gs., 71gs. and 60gs. Coming to the first season dogs, Nant, a fawn bitch, by Herschell out of Kate Cuthbert, was taken by Mr. Brocklebank for 35gs., while Mr. Hamar Bass was again to the fore when Nadir, a red dog, by Herschell out of Miss Glendyne, was offered and obtained it for 30gs., Nip the Daisy, out of the same litter, going to Mr. Drake for 25gs. Out of Fashion, by Herschell out of Bit of Fashion (42gs.), was the last in this class. Prices continued good for the second season dogs, as El Diablo, by Troughend out of Miss Glendyne, was bought by Mr. Drake for 50 gs. and Mr. Brocklebank gave the same price for Must Go, an own sister; still another, a brindle, by Greentick out of Bit of Fashion, making 100 gs. and Ny Penzez Plus, a sister to the above, 150 gs. to Mr. Hamar Bass. The third and fourth season dogs did not make any big figures, but the brood bitches were knocked down as follows: In Fashion, 100 gs; Notify (McCaffery), 105 gs; Tick Tick (Jardine), 200 gs; Newtyle (McCaffery), 210 gs; Mun (McCaffery), 80 gs; Nautilus II. (Hamar Bass), 20 gs; and Note Paper (Mr. Le Cremiere), 40 gs. These were followed by the stud dogs, Young Fullerton, a brindle dog by Greentick out of Bit of Fashion, being knocked down after some spirited bidding to Mr. McCaffery for 1,050 gs. Old Boots, by the same dog and bitch, was secured by Mr. Rhodes for 50 gs. Neston, a brindle dog, by Herschell out of Miss Glendyne, which was started at 400 gs, was taken by Mr. Dent for 500 gs. and Gay City, a red dog, by Mr. Cooke for 20 gs. The sale was indeed a memorable one.

## The American Coursing Club.

Editor *Forest and Stream*:

Since the organization of the American Coursing Club in 1886, there has never been such inactivity in the club as there is this year. Hardly a mention has been made of a fall meeting; of course hard times are largely to blame, and bounds and especially coursing greyhounds are essentially luxuries. It is natural that, after such hard times as we have had for the past year, when even the richest have felt the need of economizing, one of the first methods of reducing expenses would be the giving up of coursing. But there are other reasons that have militated strongly against the club. The idea of changing the coursing grounds is a good one. If the club holds its meeting at some other place than Great Bend, why should it be worth so much more to that place? It is a wrong idea that any town receives much benefit from a club's meeting, outside of the hotel and livery proprietors. And the more they subscribe, the more our expenses as guests and nominators will be. There is no doubt the club can find proper grounds in Kansas, Nebraska or Dakota, and I dare say almost any town in Dakota will give from one to two hundred dollars for a meeting of the A. C. A. If so, why should the club wait to see which town can be bled the hardest?

Of course, a large purse brings a large entry, but more important features are the judge and ground, and I might say the executive committee. I have been told innumerable times, seriously and humorously, of the difficulties encountered and the waste of time by executive committeemen in attending to their part of the duty. It is not my intention to go over that well-trodden ground, nor to present any fresh statistics. A statement of the case in such form as to bring into prominence the condition of the situation will be sufficient for present purposes.

The next move of the club will be watched with interest. Where will the eighth annual meeting of the A. C. A. be held?

This grand old club should be first to appear with its dates and should be a reunion of all clubs. If it is properly handled, the meeting this fall will be the grandest of them all.

 30. Schoodic, 2d Cup Race, Club.

being the case, Mr. Gould has not yet challenged for the cup, and consequently the R. V. Y. C. has not been called on to take action in the matter.

From the action of the club thus far since the cup was established, we were reluctant to believe that it had declined the challenge of Vigilant, but the statement was positive and apparently true. We are rejoiced to find that it was not true, and we can only tender a full apology to the Royal Victoria Y. C. for a criticism which, it now appears, was entirely undeserved. The R. V. Y. C. has already come in for a good deal of harsh criticism from the American press, apparently for no other reason than that it had dared to offer a rival trophy to the America's Cup at a time when that prize was removed from fair competition by the literal construction of the new deed of gift. So far as we can see, the criticisms thus directed against the club have been without foundation, the terms of its deed of trust are not unfair in themselves, and the first races under them, of Navahoe and Britannia last year, were certainly carried out most fairly and liberally. In comparing the deed of trust of the R. V. Y. C. with the new deed of the America's Cup, there is one most important point which is always overlooked—the R. V. Y. C. cup was purchased by the club, which has consequently a legal right to offer its own property on any terms, however unfair they might be from a racing standpoint. The New York Y. C., however, is not, and never has been, the owner of the America's Cup, but is only a trustee, holding the Cup under certain definite and known conditions, under which it was dedicated by the five gentlemen and yachtmen, now deceased, who won and owned it. All legal rights of the trustee terminated when the terms of the trust first were violated, a consideration which is far above any question of the comparative fairness of the true terms and the false ones.

## Columbia Y. C. Lake Race.

## CHICAGO—LAKE MICHIGAN.

## Saturday, June 16.

The second annual race of the Columbia Y. C., Michigan City, Ind., took place on Saturday, June 16. The race started in a light N.E. wind and the start was made with balloon jibs and clubtopsails set. There were nine entries and starters. The procession was led by Allie T., closely followed by the cutter Enola, then in order came Hattie B., Hattie Bradwell, Rambler, America, Ellida, Peri and Pinta. The wind held from N.E. and freshened, causing some clubtopsails and balloon sails to come down and working sails to be set in their place.

Clouds began to gather in the southeast, and matters looked serious. Allie T., away off to leeward, was seen to heel heavily and luff into the squall, and the other boats got ready for a good old blow. It did not last long, however, and Allie T. soon found herself away to windward of the entire fleet, owing to the shift of wind, and Peri and Pinta, which had been doing splendid windward work, were to leeward of everything. The squall carried away Enola's mast and Pinta put about and towed her into South Chicago.

The new cutter America, which was making her maiden cruise, sprung a leak around the rudder post and put back to Chicago. The other boats pegged along and encountered all sorts of squalls, puffs and showers. In one of the puffs Hattie Bradwell, when leading by about 8 miles, carried away her topmast, and soon after the wind lightened considerably, putting her to a great disadvantage. Ellida suffered from a refractory compass, and being unable to discover the port went about for Chicago. The race was finished in this order: Hattie Bradwell, Hattie B., Allie T., Rambler, Peri, and Pinta. After depositing Enola at South Chicago, was sailed after the racers by her plucky captain and owner, Ole Anderson and came in half an hour before starting the next morning. The captain will receive from a subscription of the club members a fine spirit compass in consideration of his pluck and seamanship.

The official times were:

	Start.	Finish.	Elapsed.	Corrected.
Hattie Bradwell.....	2 18 48	9 36 30	7 17 42	7 17 42
Hattie B.....	2 17 19	9 56 34	7 39 15	7 05 22
Rambler.....	2 15 34	10 08 25	7 50 01	7 13 09
Peri.....	2 19 31	10 49 31	7 49 38	7 29 11

The prizes were: First class, a racing cannon; second class, compass; third, set of code signals.

The weather for the return looked very threatening, and lightning and squalls loomed up everywhere. Nothing daunted, all the boats put out, led by Hattie Bradwell, which boat, with her broken topmast, with pennant floating above it, looked like an overgrown sandpiper. There were severe squalls, in which canvas had to be taken in on the way back, but all the fleet weathered through splendidly. Hattie Bradwell came in first, 45m. ahead of Rambler, which was followed closely by Hattie B., then Pinta, Peri and Allie T. It was a great race and although everybody got wet through, all were satisfied that they had had excitement and fun enough to last for some time.

## Shackamaxon Y. C.

THE seventh annual race was sailed on June 18 in the Delaware River, from a stakeboat off the club house to the black buoy at the upper end of White Sheet bar and return, 28 miles, weather clear and warm, wind southwest, tide flood. The times were:

## FIRST CLASS.

	Length.	Elapsed.	Corrected.
Emma A. Henry Y. Anderson.....	35.02 1/2	4 54 35	4 54 35
Anna, J. J. Brewer.....	35.03	4 56 00	4 56 00
Rex, Henry Schuerle.....	35.02	5 04 00	5 04 00
Victor, R. L. Bunder.....	35.03	5 08 00	5 08 00
Henrietta, James Slemmer.....	35.02 1/2	5 18 00	5 18 00
Helen, Bert Morris.....	35.01	5 19 00	5 19 00
Woodman & Florrie, Jacob Herr.....	35.02	5 20 15	5 20 15

## SECOND CLASS.

	Length.	Elapsed.	Corrected.
Nana, Frederick Weil.....	35.03 1/2	5 47 35	5 47 35
Howard G. Wm. Gann.....	35.03 1/2	6 00 00	6 00 00
Helen, R. B. Murphy.....	35.03 1/2	6 01 08	6 01 08
Rosaline, J. J. Brewer.....	35.03 1/2	6 00 42	6 00 42
Igidious, Ed. Van Thynne.....	35.03 1/2	6 00 42	6 00 42
Lizzie, Wm. Cravin.....	35.03 1/2	6 00 42	6 00 42

## THIRD CLASS.

	Length.	Elapsed.	Corrected.
Sallie B. Henry Blats.....	35.03	5 01 45	5 01 45
Maggie, Israel Jones.....	35.03 1/2	5 15 00	5 15 00
Emma, G. Tuerst.....	35.03 1/2	5 15 00	5 15 00
Wm. F. Stewart, D. Sibbitt.....	35.01	5 15 00	5 15 00
Wm. Birch, F. Morris.....	35.03	5 15 00	5 15 00

Winners: First class—Emma A.; second class—Sallie B. and Maggie; Nana, Howard G. and Helen; third class—Sallie B. and Maggie. The course was 14 miles off the wind, and a beat back against a strong flood tide and wind. First prize in each class was a gold watch, Elzin movement; second prize in each class was a silver pitcher and tray; third prize for first and second class a silver fruit tray. Regatta committee: Richard L. Binder, Jacob Eschner, Harry Schuerle. Judges: Geo. Bartel, Henry Quinn, Thos. McFaddin.

## Corinthian Y. C. 77th Regatta.

## MARBLEHEAD—MASSACHUSETTS BAY.

## Monday, June 18.

THE Corinthian Y. C. of Marblehead opened its racing season on June 17 with a handicap race for knockabouts and yachts in cruising rig. The wind was strong S.W. and the weather in every way favorable. The times were:

## CLASS A.

	Elapsed.	Handicap.	Corrected.
Monomoy, Small.....	1 54 57	0 00	1 54 57
Hiawatha, Chapin.....	1 55 58	0 00	1 55 58
Keewayden, Burnham.....	2 04 22	2 00	2 02 22

## CLASS B.

	Elapsed.	Handicap.	Corrected.
Susie, Keith.....	1 16 14	0 00	1 16 14
Merena, Follett.....	1 18 50	0 00	1 18 50
Ariel, Barrett.....	1 26 31	0 00	1 26 31

## CLASS C.

	Elapsed.	Handicap.	Corrected.
Reaper, Benson.....	1 15 08	0 00	1 15 08
Edith, Wood.....	1 30 00	0 00	1 30 00
Weasel, Sutton.....	1 42 18	0 00	1 42 18
Kraken, Chase.....	Withdraw.		
Don, Burlin.....	Withdraw.		

## CLASS D—KNOCKABOUTS.

	Elapsed.	Handicap.	Corrected.
Esther, Taggard.....	1 37 54	0 00	1 37 54
Otusa, North.....	1 25 15	0 00	1 25 15
Jane, Parker.....	1 26 21	0 00	1 26 21
Trouble, Wheeler.....	1 29 15	0 00	1 29 15
Betsey, Jones.....	1 27 52	0 00	1 27 52
Carl, Foster.....	1 20 55	1 00	1 19 55
Hera, Fowler.....	1 46 00	0 00	1 46 00
Nancy, Saltonstall.....	Withdraw.		

The winners were: Class A. Monomoy first; Hiawatha second. Class B. Susie first; Merena second. Class C. Reaper first; Edith second. Class D. Weasel third. Class D. Carl first; Trouble second; Jane third.

The last, extra is thoroughly erroneous, and misrepresents the position of the New York C. C., which has from the first avoided making any suggestions, or asking for any changes of the established conditions. The Royal C. C. challenge cup is not properly an international cup, like the New York C. C. challenge cup, but is simply a challenge cup, and may be contested by any nation, without formal challenge from canoeists belonging to recognized clubs, without regard to nationality. The cup is raced for once every year, but one race being sailed, though at one time a few years since, three races were necessary to winning it for the season. The difficulty of sailing three races led to a return to the original conditions. One condition of the challenge cup is that the challenger must come in advance by Royal C. C. and with the other conditions can only be changed by a vote of the club at a special meeting. The competition for the challenge cup has fallen off of late years, and the races have been of little importance. This year, in selecting a location, Mr. Howard's intention of challenging being then the subject of discussion, it was chosen, the course to be sailed at the camp of the club; though some advocated an open course down the river at a later date.

## Wednesday Was Clear

and bright. It was windy in the morning, however, but despite the wind a number of high scores were made. In the third event Glover, of Rochester, killed 25 straight, and Treadway and Davis each 24. In the sixth, Upson, of Cleveland, broke his 25 straight, while Van Dyke, Parker, Wheeler, Cathan and Slocum had 24 to their credit. Among the visitors were "Uncle" Adrian C. Anson, Pitcher Hutchinson and Fielder Wilnot, of the Chicago baseball team, and John Clarkson, of

SNAP SHOTS AT THE CHAMBERLIN TOURNAMENT.

the Clevelands. Anson and Wilnot took part in the shooting. The old man broke 14 out of 15 in the first event, while Wilnot scored 12.

No. 1, at 15 targets, \$3 entry, \$35 added. No. 2, at 20 targets, \$3 entry, \$35 added:

[illegible]

been shooting in rather hard luck the first two days, put clean scores to his credit in the first, fourth and fifth events.

In the third eve Merrill, Alkire and Slocum broke 25 straight, and Budd, Hoffman, Drake, Hamline, Lefever, Cathan, Tippy and Shaeben broke 24, while in the sixth Helkes put 25 to his credit, and Grimm, Redwing, Glover, Alkire, Young and North scored 24. In this event North had a straight score up to his last bid. He was shooting beautifully and had won several rounds of applause by hard hits, including a terrific erratic target hit, was left a boss. At the last bid, however, he shot a trifle quick, and left Helkes the undivided glory of first place.

Trap at San Antonio.

REGULAR weekly practice shoot of the San Antonio Gun Club,  
June 16:

No. 1, 15 single targets, unknown angles, known traps: Thiele 12, Rothwell 10, Veith 9, Shields 11, France 8, McVickar 10, Tendick 8, Paris 12, Phillips 5, Learn 9, Black 13.

[illegible]

Ties on first class won by Thiele.  
No. 3: 15 singles; team shoot: Capt. Phillips 11, Thiele 12, Evans 15.

No. 8, 15 singles. Team shoot: Capt. Phillips 11, Thiele 12, France 15, W. S. Smith 7, A. Grossman 8, Vollbrecht 9, Shields 11, Epstein 10; total 83. Capt. Veith 13, Rothwell 10, McVicker 10, Paris 10, Biesenbach 9, Tendick 4, Learn 4, Frank 11; total 71.

No. 4, 15 singles. Rothwell 13, France 12; Phillips 10, Paris 8, Veith 13, Epstein 6, Tendick 8, Grossman 8

### Team Shooting at Woodlawn Park.

As interesting as a well-contested match between teams of two men each at 25 live birds per man took place at Woodlawn Park, L. I., the stamping ground of the New Utrecht Gun Club, on June 23. The day was the hottest of the year, the mercury showing 99° above zero, but the birds were plentiful. The principals were T. W. Morley and Dr. Wynn, who shot against A. Hege-man and C. Ferguson, Jr., the stake being \$100 a side. Abel Crook was referee and Jacob Pentz scorer. The shoot began at 2:10 and continued until 4:30. The match was a close one, but Dr. Wynn's team seemed to have the call, as shown by the following scores:

Trup score type—Copyright, 1934, by Forest and Stream Publishing Co.

Missoula Rod and Gun Club.

MISSOULA, Mont. June 17.—The Missoula Rod and Gun club is supposed to be composed of about thirty members, who the present season have developed a brave lack of interest in the weekly shoots, no third of the above number being the average attendance. Nine appeared to day at the usual hour, when the usual medal contest conditions were observed by the A and B classes, 15 singles, known angles, 16 and 18yd. rise. Harry Stevens will wear the gold medal and the silver medal will go to the second shooter. The usual team shoot then occurred, resulting in the following scores: H. Woody beating the one chosen by J. T. Sawhill by a score of 43 to 42. 15 men took each team, 15 singles, unknown angles. Scores of club shoot:

### "Trap-Shooter's Ready Reckoner."

THERE has just come from the FOREST and STREAM press an extremely useful pocket reference book for trap-shooters. Its full title reads, "Trap-Shooter's Ready Reference. A series of tables showing at a glance the division of purses and money. Conditions, simple and complex, with entries from one to fifty. For use in clubs and tournaments. Compiled by J. C. Clark, Secretary Kansas State sportsmen's Association." Price 25 cents, postpaid, by Forest and Stream Pub. Co.

Thursday, the Last Day,

saw a considerable falling off in the attendance, though the shooting was of an extremely high order. In event No. 2 Squad 5 covered itself with glory. This was a Ohio squad and was composed of Heikes, Rike and Raymond. The latter three were of Columbus, Pennsylvania, and were the best marksmen of the state. Before these debutant marksmen the first three score bluecocks crumbled to dust as fast as they were felled from the traps. Then Raymond dropped out, but the others went right on pulverizing the pretty little yellow and broken 100 straight. Some of the traps got tired and quit. Five men had to trot to travel with this crowd to-day. It is only fitting to add that eight others broke straight in this event.

D. C. Smith of Hamilton, live bird champion of Canada, who had

New York Schuetzen Corps Festival.

The thirty-seventh annual festival of the New York Schuetzen Corps, Capt. Henry Offerman, was held in the Union Hill Schuetzen Park, Union Hill, N. Y., on Wednesday and Thursday of last week. One hundred and seventy-five members assembled at headquarters Wednesday morning; coaches were in waiting to transport them to the park. The arrival in the park was followed by lunch, after which the corps was marched to the shooting house, where the festival was formally opened by the usual ceremonies of saluting the eagle, etc.

The shooting programme, which was open to the general public, consisted of \$500, in cash prizes. The festival was in the hands of the following shooting committee: John G. Thölke, first shooting master; B. Zettler, second shooting master; A. W. Lemcke, third shooting master; Wm. Krumsiek, Aug. Liss, John H. Klee, Henry Strate, Chas. Grosch, Fred Schmidt, Alb. Schulenburg, Fred Lange, J. D. Wilkens, A. H. Sievers, Wm. Hahn, Fred Faconpre, Wm. Wessel. This committee was composed of active shooters, each of whom has had a large experience in the past in the management of prize shoots. Another element which added to the success of the festival was the active zeal of Capt. Offerman.

The shooting on Wednesday was confined principally to members of the corps. The only visitors on that day that we noted were Geb. Raus, Louis Flach and M. B. Engel of the Zettler Club.

On Thursday morning visiting riflemen began to arrive. Among the first arrivals were Harry M. Pope and Fred K. Rand, from Hartford, Conn. These were followed by others during the day. A census of the group developed the following prominent riflemen: Fred. C. Ross of Brooklyn, Henry Holges, R. Busse and L. Vogel, New York; L. P. Hansen, Jersey City; Geo. Schlicht, Guttenberg; David Miller Aug. Meyns, Hoboken; M. Dorrier, Greenville.

About 4 P. M. on Thursday came large delegations from the New York City and the New York Central Corps. The shooting was brilliant and interesting at times. Rand of Hartford had two shots (flags) on a man ticket. He neglected to put the necessary bullet into the rifle for the third shot; the result was a miss and another opportunity lost. Henry Holges, with a 25 and a 24 on the prize ticket, pulled his third shot too much to the right; up came the flag (25) giving him 74, the best score of the festival.

An unusual sight in the shooting house was two veteran riflemen, who were present and not participating. We refer to Michael Dorrier and David Miller. They came without their "outfits," and looked on. The "Harlem Joker" remarked that Michael "appeared like as though he had come away and forgotten something, and had not time to go back for it." Both of these riflemen claim that their shooting days are over.

During the two days that the public and individual members of the corps had been engaged in competition upon the prize targets, the corps as a whole had been diligently engaged in shooting into pieces the eagle from his lofty perch. By 6 P. M. on Thursday the bird had been denuded of every limb and decoration, from crown to tail, until there was nothing remaining but the body or center piece. To him who succeeded in bringing this piece to the ground belonged the honor and responsibility of kingship for the year 1894-5. Round after round was shot by the members in rotation until it was nearly dark, when the deciding shot was fired by Barney Kumm, the secretary of the corps, and the body was down. Barney Kumm was King. "Long live the king." The settling up of the secretary's accounts developed a surplus over expenses of the two days' shoot, and Capt. Offerman and his committee felt justly proud of the success of the festival of 1894.

Ring target, 3 shots per ticket, two best to count for first 5 prizes: H. Holges, 70 74-144 M. B. Engel, 69 C. G. Zettler, 66 F. C. Ross, 70 72-142 L. Vogel, 69 G. Krauss, 65 L. Flach, 70 71-141 H. M. Pope, 69 W. Roedel, 65 R. Busse, 69 70-139 B. Zettler, 68 F. Faconpre, 64 G. Schlicht, 69 69-138 G. W. Plaisted, 68 Wm. Forkel, 64 F. Schmidt, 70 L. P. Hansen, 67 Wm. Rosenbaum, 63 F. K. Rand, 70 Aug. Meyns, 67 C. Grosch, 63 Premiums for 5 best bullseyes: Hol. C. Ross 347, F. Ross 347, L. Flach 341, H. M. Pope 340, R. Busse, G. Schlicht 340.

Best bullseye by measurement: H. M. Pope 20 degrees, F. C. Ross 24, H. Lahden 31, L. Vogel 31½, L. P. Hansen 32, H. Butler 35½, J. Bonn 36½, G. Schlicht 37, J. D. Wilkens 37, F. Plump 45½, L. Flach 47, F. Schmidt 53, J. H. Meyers 54, R. Busse 55, B. Zettler 59, M. B. Engel 70, F. K. Rand 73, J. G. Thölke 75½, H. Holges 79, G. W. Plaisted 85. Premiums for 5 best bullseyes: Hol. C. Ross 40, F. Schmidt 27, Hansen 24, H. M. Pope 23, L. Flach 20, G. Schlicht 16.

Premium for first flag Wednesday, L. Flach; for last flag Wednesday, W. Rosenbaum; for first flag Thursday, H. M. Pope; for last flag Thursday, L. P. Hansen.

Next target, 3 shots, possible 60: George Schlicht 59, H. Holges 59, F. C. Ross 58, Aug. Meyns 58, Ph. Feigel 57, L. Flach 56, Dr. Grosch 56, F. Schmidt 55, R. Busse 55, H. M. Pope 55, J. G. Bonn 54, L. Vogel 54, C. G. Zettler 54, George Plaisted 54, J. Facklam 54.

Cincinnati Rifle Association.

CINCINNATI, O., June 17.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day and made the scores appended. Conditions, 200yds., off-hand, at the standard target:

Good Eye.

MR. H. R. WILLS of Alton, Ill., writes me about a string he has just shot on his friend Mr. Lahee's grounds, at that city. This probably is intended to frighten the Western office of FOREST AND STREAM about going into another match with Mr. Wills, but it will fail of that purpose. Mr. Wills has often beaten us, but he hasn't got us scared yet, nor has he yet wrested away from our Security Building the palm of the championship of Halstead street. The only trouble is, Mr. Wills has never seen this office fully extended as yet. We will be ready the next time he comes. He writes:

"Not for publication, I wish to give you the result of a little 100yd. shoot I made the other day with a new Marlin .22 which I was sighting up for a friend. Conditions—off-hand, no swearing. The shoot took place on Mr. Lahee's grounds, Massachusetts target, bullseye 3in. with a 12 center. I simply give the totals of each 10-shot string, 60 consecutive in all, as follows: 106 109 105 109 100 109-633. Average 10.63. This is the highest that has been made upon our 100yd. range and is very close shooting, if I do say it. I wish also to impress upon your mind that I have no ulterior designs upon your nerves in giving this bit of information, and still insist that you do me up to the queen's taste if you will try it some time under the right conditions. Yours very truly, H. R. WILLS"

Blumenthaler Co. No. 6, N. Y. S. Bund. No. 1

Here their second shoot at their gallery June 23. Thirteen members were present to compete for silver goblets donated by the company. The following scores were made:

HENRY D. MULLER.

Greenville Rifle Club.

The extreme hot weather of the past week is having its effect upon the members of the Greenville Club. At the weekly shoot on Friday night several of the regulars were prominent by their absence. Winners: First Class—C. Boag first, G. Purkess second. Second Class—C. Charlock first, J. Spain second. Third Class—R. Daniels first, Holzappel second. Scores: C. Boag 240, Purkess 237, J. Boag 235, Scheeline 235, Collins 225, Spain 234, Charlock 231, Agneau 231, Chavant 233, Hill 230, Pudson 206, Daniels 202, F. Wuestner 212, E. Wuestner 219.

R. Busse Defeats L. Buss.

THERE was a well contested gallery match shot off on Zettler Bros.' range, 219 Bowers, New York, on June 18, between R. Busse, of the New York City Corps, and L. Buss, of the Empire Rifle Club, 100 shots off-hand, for \$10 a side. Scores:

R Busse.....	245 240 238 246 233 243 244 243 242 238-2417
L Buss.....	241 238 240 240 239 244 245 243 238 240-2408

Schlicht Rifle Club.

At their weekly gallery shoot on June 19, Geo. Dorr won the championship medal, J. Diehl the first class medal, A. Meyer the second class medal and Geo. Robert the third class medal. Scores: G. Schlicht 240, G. Dorr 236, A. Meyer 236, C. Meyer 232, J. Diehl 234, M. Daus 232, F. Richard 231, W. Schlicht 229, G. Lautenberger 225, G. Scholz 231, A. Deubline 230, E. Wagner 215, F. Lambriz 211, J. Bombers 210, J. Dedrick 218.

Excelsior Rifle Club.

At the weekly gallery shoot, June 19, the following scores were made: W. J. Hennessey 231, E. H. Duff 231, G. Ruland 211, J. Binns 230, G. G. Williams 230, W. Hughes 237, J. Hughes 233, E. J. McCarthy 233, Thos. Hughes 238.

RIFLE NOTES.

Our city papers have during the past week published various cable reports of wonderful work by Gus Zimmerman with his rifle at the International shoot in Mainz, Germany. If Zimmerman has secured one-half of the champion trophies credited to him, he does credit to himself and the American riflemen, whom he represents.

The Excelsior Club of Jersey City will dedicate its new club house, No. 54 Gregory street, on Thursday night of this week. Invitations have been sent out to our prominent clubs and individual riflemen to be their guests on this occasion. An interesting feature of the evening's sport will be a team match between the home club and a team from the Greenville Rifle Club.

The Zettler Rifle Club will hold its regular bi-monthly shoot at Wissel's Cypress Hill Park, July 1. Visiting riflemen will be welcome to participate.

The Newark Shooting Society will hold weekly practice shoots on Thursdays during the summer and autumn, at the Newark Schuetzen Park.

A visit to Armbruster's Park on Saturday of last week brought us into the presence of one of New York's most enthusiastic riflemen in the person of Dr. E. R. Chadbourne. The doctor, like many others in the profession, is an ardent devotee to the rifle. We append two scores made by Dr. Chadbourne on this occasion, using the .25-10 Stevens, another proof of the efficiency of this small caliber at 200yds. Scores: 9 10 10 8 10 9 10 9 6 10-91 10 10 9 7 10 9 9 8 10 8-90

ARMBRUSTER'S Greenville Schuetzen Park, most thoroughly equipped for rifle shooting. Range open for practice every Saturday.—Adv.

**YALE MIXTURE**

A GENTLEMAN'S SMOKE.

WE COULD NOT IMPROVE THE QUALITY if paid double the price. It is the choicest Smoking Tobacco that experience can produce or that money can buy.

MARBURG BROS., BALTIMORE, MD.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where we get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

MARSTERS HAS WORMS

Sand Worms 12 and 15c. per doz. White or Blood Worms, 25c. per doz.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and not decreasing the quality, it increases my business every year.

Price, \$1.00.  
FOREST AND STREAM PUBLISHING COMPANY, NEW YORK.

FISHERMEN, ATTENTION!

\$225 in Gold Given Away!

THE NATCHAUG SILK CO.

will give nine big cash prizes for the following catches of fish taken during the season 1894, viz: From the 1st day of April to the 1st day of November inclusive, with the NATCHAUG SILK FISHING LINE:

- FIRST PRIZE— \$25 in Gold for the heaviest Muskallonge.
- SECOND PRIZE— \$25 in Gold for the heaviest small mouth Bass.
- THIRD PRIZE— \$25 in Gold for the heaviest large-mouth Bass.
- FOURTH PRIZE— \$25 in Gold for the heaviest Lake Trout.
- FIFTH PRIZE— \$25 in Gold for the heaviest Brook or Mountain Trout caught in other waters than in the State of Maine.
- SIXTH PRIZE— \$25 in Gold for the greatest variety and largest number of fresh water fish caught in one day by one person.
- SEVENTH PRIZE— \$25 in Gold for the greatest weight of any kind of fresh water fish caught in one day by one person.
- EIGHTH PRIZE— \$25 in Gold for the heaviest fish of any kind caught with the Natchaug Silk Line in fresh or salt water.
- NINTH PRIZE— \$25 in Gold for the heaviest Brook Trout caught (SPECIAL) in the State of Maine.

As the Trout caught in the lakes of Maine are acknowledged to be genuine Brook Trout, on account of the size of these fish we bar them from our Fifth Prize, and offer this as a special prize for these waters.

A sample card of our Lines sent free on application.

CONDITIONS:

All these fish must be caught with the Natchaug Silk Fishing Line in fresh water (except Prize 8) and by fair angling.

Competitors must forward to us their full name, P. O. address, together with the description and weight of fish caught, and name of dealer from whom line was purchased, together with the name of one reputable witness affixed. On November 7th, 1894, the award will be made, and the list of successful competitors announced in the FOREST AND STREAM and the American Field.

All successful competitors before receiving their prizes will be required to send an affidavit as to their statement of fish caught.

If your dealer does not keep the Natchaug Silk Fishing Lines, order direct from

THE NATCHAUG SILK CO., Willimantic, Conn.,  
Or 213--215 Fifth Avenue, Chicago.

PRICE LIST
